

Leo Martin

Sr. Software Engineer | C#, ASP.NET Core, Angular, Azure,

Miami, FL US • +1 (407) 674-0656

leomartintechy@gmail.com | <https://www.linkedin.com/in/leo-martin-a2365435a/>

Skills

- C++, C#, Python, ASP.NET, ASP.NET Core, ASP.NET MVC, VB.NET, WCF
- Blazor, Razor, Angular, JavaScript, TypeScript, Node.js, Xamarin, .NET MAUI
- MS SQL Server, AWS Dynamo DB, MongoDB, PostgreSQL, T-SQL, Stored Procedures
- RESTful/GraphQL/SOAP APIs, Monetate, Locize, EF Core, Redis
- AWS Lambda, AWS Kinesis, Amazon S3, CloudWatch, Amazon API Gateway, Amazon EKS, Docker
- Git, BitBucket, Confluence, Azure DevOps, Terraform, Jira, DataDog
- Moq, NUnit, MSTest, Unit testing, Agile/Scrum, TDD, BDD, A/B Testing
- Microservices, DDD, SAGA, CQRS, Event-Driven Architecture

Professional Experience

CVS Health, Remote

Senior Software Engineer

12/2023-11/2024

- Migrated a healthcare claims processing system from .NET Web Forms and AngularJS to .NET Core 6 and Angular 13, improving the user interface and ensuring compliance with HL7, FHIR, and HIPAA standards for secure and efficient data exchange.
- Transitioned a monolithic patient management system to a scalable Azure Cloud Native microservices architecture using Domain-Driven Design (DDD) to improve performance, scalability, and secure handling of patient data.
- Implemented a hybrid Azure infrastructure with App Services, Active Directory, Azure Functions, Logic Apps, Service Bus, and Kubernetes Services, ensuring real-time data synchronization and secure compliant healthcare application processing, which improved system uptime by 15% and reduced data processing latency by 25%.
- Engineered an OAuth 2.0 and JWT token-based authentication system in .NET Core to secure access to electronic health records (EHR) through Azure AD, while leveraging Azure Key Vault to protect sensitive patient information.
- Developed RESTful APIs with Azure API Management, migrating legacy SOAP APIs to modern RESTful APIs and documenting the APIs with Swagger and Postman to enhance integration with healthcare providers.
- Leveraged Service Mesh with Istio and Azure Service Bus for efficient communication between healthcare microservices, improving reliability by 20%, scalability by 30%, and interoperability, leading to faster and secure data exchange.
- Set up a DataDog dashboard for monitoring resource usage and logs, reducing system downtime by 10% and improving bug tracking by 30% to ensure smooth healthcare system operations.
- Optimized SQL Server stored procedures and T-SQL queries using Entity Framework Core, improving database performance by 20% and speeding up healthcare data retrieval and processing.
- Engineered a testing strategy with unit testing, integration testing, and end-to-end testing using Monetate, Jasmine/Karma, and NUnit, achieving **70%** test coverage to ensure application stability and security.

- Designed and enhanced UI views and created SSRS reports, improving data visualization by 20% and expediting decision-making processes by 15%, leading to measurable improvements in patient outcomes.
- Led and mentored an Agile team of 5 software developers, using Scrum methodologies to ensure the timely delivery of high-quality healthcare software solutions.

Zulily, Remote
Senior Software Engineer

05/2021-11/2023

- Designed and implemented scalable and maintainable microservices to enhance Zulily's e-commerce platform.
- Deployed stored procedures using EF Core in MS SQL Server, streamlining database operations and reducing query response time by 20%, improving overall system efficiency.
- Developed dynamic web applications using Razor server architecture, enhancing user experience and interaction efficiency.
- Orchestrated AWS ETL pipeline using Lambda triggers, Node.js, Kinesis Firehose to get the data synced from DynamoDB, achieving a 5% reduction in data transfer times.
- Integrated AWS cloud services to improve scalability, reliability, and security in Zulily's infrastructure.
- Applied MSTest in ASP.NET framework, including the setup of test projects, the implementation of arrange-act-assert patterns, and the execution of both unit and integration tests.
- Conducted code review process and mentored 2 junior developers, providing comprehensive guidance on coding standards and best practices.

Ultimate Software
Software Engineer

01/2016 – 04/2021

- Built the development of multiple mobile features from analysis to production using ASP.NET Core, C#, SQL, and Angular.
- Converted a legacy monolithic application based on VB.NET into a microservices architecture, employing the SAGA pattern with ASP.NET Core, RabbitMQ, and AWS, resulting in significant performance enhancements.
- Led the transition to an event-driven model, enabling real-time data processing and enhancing the ability to handle high-volume, asynchronous tasks efficiently, resulting in a 30% improvement in processing speed and a 25% increase in task throughput.
- Constructed a dashboard and second-largest Discord server using AWS DynamoDB, React, Python, Django and Node.js with Redis.
- Optimized the data base operation performance by redesigning PostgreSQL schemas.
- Maintained and managed over 10 microservices with fully automated testing and production pipelines, utilizing Event Sourcing and CQRS.
- Deployed AWS Lambda functions for automated tasks.

Education

Florida International University
Bachelor's Degree in Computer Science

08/2012 – 12/2016
