

Likitha Reddy Nalla
+1 872-248-9713
likithanalla15@gmail.com
Senior .Net Developer

PROFESSIONAL SUMMARY:

- Senior .NET Full Stack Developer with over 9+ years of comprehensive experience in software design and development, system integration, and development of scalable applications.
- Utilized C#, NHibernate, and .NET Framework (4.5) to develop robust backend systems, improving application performance and scalability.
- Integrated Microsoft IIS and Microsoft Visual Studio (2015) to streamline application deployment and development processes, enhancing operational efficiency.
- Employed MS SQL Server (2012) for database management, optimizing data storage and retrieval processes to support high-volume data transactions.
- Leveraged AWS for cloud-based solutions, deploying scalable and secure applications that met dynamic business requirements.
- Implemented MSTest and Castle Windsor to ensure the reliability and maintainability of code, enhancing software quality through rigorous testing.
- Developed frontend applications using VB.NET and Windows Forms at Credit Suisse, creating user-friendly interfaces that improved client interactions.
- Utilized Entity Framework (5) to facilitate efficient data manipulation and integration, streamlining data operations in financial systems.
- Enhanced application performance using JetBrains ReSharper, ensuring code quality and adherence to best practices in software development.
- Managed client-side functionalities using jQuery, improving responsiveness and interactivity of financial applications.
- Applied AWS services extensively to host and manage application environments, ensuring high availability and scalability.
- Developed and maintained .NET microservices using C# (6.0) and .NET Framework (4.7) at Della InfoTech Inc, improving system modularity and flexibility.
- Leveraged MVC (5) architecture to enhance application maintainability and streamline development processes for IT services.
- Utilized Dapper for object-relational mapping, optimizing data access and reducing overhead in database interactions.
- Integrated AWS Lambda for serverless computing solutions, reducing infrastructure costs and increasing system responsiveness.
- Implemented Angular (4) to develop dynamic and responsive front-end interfaces, enhancing user experience and accessibility.
- Managed application messaging and communication using RabbitMQ, ensuring reliable data transfer between microservices.
- Employed NUnit for comprehensive testing of microservices, ensuring each service met functional and performance specifications.
- Developed backend systems using VB.NET and .NET Core (2.2) at Nextgen, focusing on creating scalable solutions for the banking domain.
- Integrated SignalR to facilitate real-time communication features, enhancing user engagement and operational efficiency in banking applications.
- Utilized Entity Framework Core (2.1) for effective database management, optimizing queries and transactions for better performance.
- Deployed applications using AWS ECS, managing services effectively in a scalable cloud environment to meet growing user demands.
- Implemented Vue.js to create interactive and modern web interfaces, aligning with contemporary web standards and user expectations.
- Developed Web APIs using VB.NET and .NET Core (2.1) at Vanguard, focusing on building secure and scalable services for financial applications.

- Leveraged Azure Cosmos DB for managing large-scale data distribution and storage, enhancing database performance and scalability.
- Employed Azure Functions to build and manage serverless applications, optimizing resource utilization and reducing operational costs.

TECHNICAL SKILLS:

- **Languages** : C#, VB.NET
- **Frameworks** : .NET Framework, .NET Core, MVC, Entity Framework
- **Databases** : MS SQL Server, Amazon RDS, Azure Cosmos DB
- **Frontend** : Angular, Vue.js, jQuery, Blazor
- **Testing Tools** : MSTest, NUnit
- **Cloud Platforms** : AWS, Azure, AWS Lambda, AWS ECS, Azure Functions
- **DevOps** : Azure DevOps
- **IDEs and Tools** : Visual Studio, JetBrains Rider, JetBrains ReSharper
- **Other Technologies** : RabbitMQ, SignalR, .NET Core DI, Castle Windsor

PROFESSIONAL EXPERIENCE:

Client: Charles Schwab, Westlake, TX

Nov 2023 to Present

Role: Sr. .NET Developer

Roles & Responsibilities:

- Developed financial applications using .NET Core (2.0), integrating AWS Lambda to enhance serverless computing capabilities.
- Designed and implemented responsive user interfaces with React, improving user engagement and operational efficiency.
- Managed backend services using ASP.NET Core, optimizing system architecture for better performance and scalability.
- Enhanced data interaction and management using Dapper, streamlining complex SQL operations across multiple databases.
- Configured and optimized Nginx to serve as a reverse proxy and load balancer, enhancing web server performance.
- Utilized JetBrains Rider to write, test, and debug code, boosting productivity and reducing development time.
- Employed AWS RDS for robust database management, ensuring high availability and reliability of financial data.
- Implemented continuous integration and deployment pipelines using NUnit and Autofac, maintaining high software quality.
- Collaborated with product management teams to align software solutions with strategic business goals.
- Conducted performance optimizations for web applications, ensuring they met the demanding standards of the financial sector.
- Facilitated the transition of legacy systems to modern architectures using .NET Core, enhancing system efficiency and security.
- Designed APIs using ASP.NET Core, facilitating effective communication between various software components.
- Integrated Autofac for dependency injection to manage application dependencies dynamically and reliably.
- Applied modern security practices within application development to protect against evolving cybersecurity threats.
- Leveraged AWS Lambda for handling high-load processes without the need for traditional server management.
- Optimized application responsiveness and efficiency with effective use of caching mechanisms and data retrieval strategies.
- Ensured seamless user experience by implementing advanced client-side rendering techniques with React.
- Automated repetitive tasks and processes using custom scripts and tools, increasing development team efficiency.
- Prepared and maintained comprehensive documentation, which facilitated easier maintenance and scalability of applications.
- Contributed to the refinement of software development lifecycle processes, enhancing the overall workflow.

- Engaged in rigorous testing phases using NUnit, ensuring each deployment was stable and met all functional requirements.
- Implemented version control best practices using Git, ensuring proper code management and team collaboration.
- Monitored live application metrics to proactively address performance bottlenecks and maintain optimal operation.
- Provided expert guidance and support to junior developers, fostering a culture of learning and continuous improvement.
- Stayed updated with the latest developments in .NET technologies, applying them to current projects to ensure cutting-edge solutions.
- Experienced in end-to-end development using frontend technologies (Svelte, TypeScript, Tailwind CSS) and backend technologies (.NET Core, Node.js).
- Designed and optimized network communication using TCP/IP protocols for reliable, connection-oriented data transmission across distributed applications.
- Developed and integrated USB-based communication for data exchange between hardware devices and software applications.

Environment: .NET Core, React, AWS Lambda, ASP.NET Core, Dapper, Nginx, JetBrains Rider, AWS RDS, NUnit, Autofac, Git, Svelte, TypeScript, Tailwind CSS

Client: Vanguard, Valley Forge, PA

Sep 2021 to Nov 2023

Role: .Net Developer

Roles & Responsibilities:

- Developed secure financial services applications using VB.NET and .NET Core (2.1), enhancing system reliability and user trust.
- Integrated Blazor for building dynamic and interactive user interfaces, which greatly improved client interaction and satisfaction.
- Employed Azure Cosmos DB for scalable and high-performance data management solutions, optimizing data storage and access.
- Utilized Azure Functions to architect serverless applications, reducing infrastructure costs and simplifying scalability.
- Implemented Azure DevOps for robust CI/CD pipelines, which streamlined the development, testing, and deployment processes.
- Conducted unit testing with NUnit to ensure all components functioned correctly and met predefined specifications.
- Applied .NET Core Dependency Injection across various modules, improving code manageability and reducing dependencies.
- Created responsive and intuitive user interfaces using Vue.js, enhancing the frontend functionality and aesthetic appeal.
- Configured Kestrel as a cross-platform web server to optimize web application performance and handling of client requests.
- Leveraged Azure Key Vault for managing secrets and application keys securely, enhancing data protection and compliance.
- Utilized SignalR for real-time communication features, enabling instant data updates and notifications to clients.
- Enhanced data querying and manipulation capabilities using LINQ with Entity Framework Core, streamlining database operations.
- Designed and implemented robust API gateways using Azure API Management, ensuring secure and efficient API traffic management.
- Integrated OAuth and OpenID Connect for secure user authentication and authorization, safeguarding access to application resources.
- Optimized application performance by implementing caching mechanisms with Azure Redis Cache, reducing load times and server stress.

- Automated repetitive tasks and workflows using Azure Logic Apps, increasing operational efficiency and reliability.
- Developed custom middleware in .NET Core for error handling and logging, enhancing application diagnostics and monitoring.
- Implemented role-based access control (RBAC) within applications, ensuring users had appropriate access rights based on their roles.
- Utilized Azure Service Bus for decoupled message-based communication between components, improving system integration and scalability.
- Deployed applications globally using Azure App Service, ensuring high availability and geographic redundancy.
- Conducted stress and performance tests using Azure Monitor and Application Insights, providing insights into application behavior under peak loads.
- Facilitated seamless data integration and synchronization across platforms using Azure Data Factory, enhancing data consistency and workflow automation.
- Enhanced system security and compliance by conducting regular security audits and implementing recommended improvements based on Azure Security Center guidelines.

Environment: VB.NET, .NET Core, Blazor, Azure Cosmos DB, Azure Functions, Azure DevOps, NUnit, Vue.js, Kestrel, Azure Key Vault, SignalR, LINQ, Entity Framework Core, Azure API Management, OAuth, OpenID Connect, Azure Redis Cache, Azure Logic Apps, Azure Service Bus, Azure App Service, Azure Monitor, Application Insights, Azure Data Factory, Azure Security Center

Client: US Bank, Minneapolis, MN

Oct 2019 to Aug 2021

Role: .NET Microservices Developer

Roles & Responsibilities:

- Developed back-end solutions using VB.NET and .NET Core (2.2), which improved scalability and performance in banking applications.
- Utilized Entity Framework Core (2.1) to handle data operations, enhancing data access efficiency and reducing development time.
- Implemented SignalR for real-time communication, facilitating instantaneous updates and interactions within the banking platform.
- Leveraged Visual Studio (2019) for development, providing a robust environment for writing, testing, and debugging code.
- Employed AWS ECS to deploy containerized applications, ensuring scalable and reliable hosting solutions.
- Integrated Vue.js to create responsive and dynamic user interfaces, improving user engagement and operational efficiency.
- Utilized Amazon SQS for message queuing, enabling reliable communication between distributed system components.
- Conducted unit testing with MSTest, ensuring the reliability and performance of newly developed features.
- Applied .NET Core Dependency Injection within services, improving code manageability and reducing coupling.
- Enhanced security measures using OAuth and OpenID Connect, safeguarding sensitive banking transactions and customer data.
- Automated deployment pipelines using AWS CodePipeline and CodeBuild, streamlining continuous integration and delivery processes.
- Configured AWS CloudWatch for monitoring and logging, providing real-time visibility into application performance and health.
- Developed API endpoints using RESTful principles, facilitating efficient and secure data exchange between systems.
- Employed asynchronous programming techniques with .NET Core, enhancing application responsiveness and throughput.
- Implemented caching strategies using Redis, reducing database load and improving response times for high-traffic applications.

- Used Entity Framework Core migrations to manage database schema changes, maintaining data integrity and continuity.
- Facilitated data synchronization across distributed systems using Azure Service Bus, enhancing system reliability and message delivery.
- Optimized SQL queries and indexes with MS SQL Server, improving database performance and query execution times.
- Integrated third-party APIs seamlessly into the banking platform, expanding functionality and service offerings.
- Conducted performance tuning and optimization sessions, identifying and addressing bottlenecks to maintain optimal system performance.
- Managed and orchestrated deployments for microservices and .NET applications, improving efficiency and reducing deployment risks.

Environment: VB.NET, .NET Core, Entity Framework Core, SignalR, Visual Studio, AWS ECS, Vue.js, Amazon SQS, MSTest, OAuth, OpenID Connect, AWS CodePipeline, AWS CodeBuild, AWS CloudWatch, Redis, Azure Service Bus, MS SQL Server.

Client: Yana Software Private Limited, India

Apr 2017 to Jul 2019

Role: .NET Developer

Roles& Responsibilities:

- Engineered robust financial applications using C# and NHibernate, improving data access and application performance.
- Integrated .NET Framework 4.5 to develop and enhance workflow capabilities, increasing operational efficiency.
- Employed Microsoft Visual Studio 2015 to streamline the development process, enhancing coding efficiency and debugging.
- Managed databases with MS SQL Server 2012, optimizing data storage and retrieval processes for financial systems.
- Utilized Microsoft IIS for deploying and managing web applications, ensuring high availability and security.
- Implemented continuous integration and delivery using AWS, which reduced deployment cycles and improved scalability.
- Applied MSTest for unit testing, ensuring the reliability and stability of financial software before live deployment.
- Leveraged Castle Windsor for implementing advanced dependency injection patterns, enhancing application modularity.
- Configured Windows Workflow Foundation (WF) to create and manage workflows, streamlining business processes.
- Conducted code reviews using Visual Studio, maintaining high code quality and adherence to industry standards.
- Developed and maintained application security measures, ensuring the protection of sensitive financial data.
- Performed performance tuning and optimizations to improve application responsiveness and user satisfaction.
- Integrated enterprise-level application features, which enhanced user experiences and client satisfaction.
- Automated routine tasks and processes, improving operational efficiency and reducing manual errors.
- Collaborated with cross-functional teams to align project objectives with business strategies.
- Documented technical specifications and architectural decisions to facilitate knowledge transfer and maintenance.
- Monitored application logs and performance metrics to proactively address potential issues.
- Trained junior developers in .NET development practices, fostering a collaborative and knowledgeable team environment.

Environment: C#, NHibernate, .NET Framework 4.5, Microsoft Visual Studio 2015, MS SQL Server 2012, Microsoft IIS, AWS, MSTest, Castle Windsor, Windows Workflow Foundation (WF), Visual Studio, Git.

Client: Aulfait Technologies Pvt. Ltd., India

Oct 2015 to Mar 2017

Role: .NET Frontend Developer

Roles & Responsibilities:

- Developed front-end applications using C#, created dynamic web applications using **Angular**, focusing on user interaction and responsiveness for business systems.
- Implemented KnockoutJS to create dynamic, responsive web applications, improving client-side functionality.
- Managed database operations utilizing PostgreSQL, enhancing data integrity and query performance.
- Deployed applications on Microsoft IIS, ensuring robust, scalable hosting for high-traffic environments.
- Integrated Microsoft Visual Studio 2013 into development workflows, boosting productivity and code quality.
- Utilized Azure for cloud storage solutions, optimizing data accessibility and disaster recovery processes.
- Conducted extensive testing with NUnit, validating functionalities and ensuring compliance with requirements.
- Employed Castle Windsor for dependency management, improving code scalability and reducing coupling.
- Streamlined development processes using Azure CI/CD pipelines, enhancing team efficiency and product reliability.
- Collaborated with QA teams to identify and fix bugs, ensuring high-quality software releases.
- Documented development processes and updates, maintaining clear records for project stakeholders.
- Optimized web applications for better performance and faster loading times, enhancing user satisfaction.
- Participated in Agile project management meetings, contributing to sprint planning and review sessions.
- Implemented security best practices in application development, safeguarding user data and privacy.
- Engaged in professional development opportunities to stay updated with the latest in .NET technologies.
- Optimized ETL workflows to enhance performance, minimize latency, and ensure data consistency across enterprise systems.
- Implemented error handling, logging, and performance tuning in SSIS to improve reliability and efficiency in data processing
- Built scalable web applications with optimized UI/UX, integrating APIs, databases, and cloud services for seamless user experiences.

Environment: C#, KnockoutJS, PostgreSQL, Microsoft IIS, Microsoft Visual Studio 2013, Azure, NUnit, Castle Windsor, Azure CI/CD, Git, Angular

Education:

- Bachelor of Technology in Information Technology from Anurag University, Telangana, India **2011- 2015**
