

MANJUSHA DONDETI

Frontend Developer

+1 (980) 319-3105 | d.manjusha3105@gmail.com | Arlington Heights, Illinois

PROFESSIONAL SUMMARY:

Senior Frontend Developer with over four years of experience specializing in HTML, CSS, JavaScript, React, and Angular; recognized for optimizing MySQL queries resulting in a 30% improvement in performance. Collaborated with cross-functional teams to implement new features that enhanced user experience while receiving accolades for consistent delivery of high-quality code across projects.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, HTML5, CSS3, JavaScript, TypeScript

Frontend Frameworks & Libraries: React, Angular, Next.js, Vue.js, GraphQL

Databases: MySQL, MongoDB, SSMS

Testing & Debugging: Jest, Cypress, Enzyme, Chrome DevTools

Build Tools & Version Control: Webpack, Gulp, NPM, Yarn, Git, GitHub

CSS Frameworks & Preprocessors: Bootstrap, Tailwind CSS, Sass, Less

Tools, Deployment & Cloud: Visual Studio Code, Excel, Jupyter Notebook, Jenkins, Kubernetes, AWS, Netlify, Vercel, AWS Amplify, Firebase, Slack, Trello, Jira

WORK EXPERIENCE

Best Brains - Remote, USA

Frontend Developer(Contract)

Apr 2024 – Present

- Leveraged AWS services such as EC2 and CloudWatch to monitor and maximize application performance, reducing downtime by 40%.
- Implemented automated testing frameworks like Jest and Cypress, cutting bug-related issues by 25% during production releases.
- Reduced production bugs by 25% through the implementation of automated testing frameworks, including Jest and Cypress, leading to a more stable and reliable codebase.
- Accelerated development efficiency by 20% by creating and maintaining a library of reusable UI components, ensuring consistency in design while reducing development time.
- Boosted data-driven capabilities by 35% through seamless API and GraphQL integrations.
- Ensured system efficiency by diagnosing performance bottlenecks using AWS tools.
- Expanded data-driven capabilities by 3x by integrating and revamping RESTful APIs and GraphQL, allowing for seamless interaction between frontend and backend systems without compromising performance.
- Streamlined feature deployment by 30% by integrating Next.js for performance elevation.

Amazon – Seattle, USA

Software Development Engineer

Sep 2022 – Jan 2024

- Spearheaded system architecture reviews that led to a 15% reduction in bug rates across multiple service components.
- Directed containerization with Docker and orchestration with Kubernetes to streamline deployment processes for 4+ microservices.
- Designed and maintained a microservices architecture with AWS, enhancing system reliability and operational efficiency.
- Shortened software release cycles by 50% by implementing robust continuous integration and continuous deployment (CI/CD) pipelines using Jenkins and Git, allowing for faster and frequent updates.
- Implemented comprehensive testing strategies and conducted rigorous code reviews to ensure exceptional code quality and maintainability. Altered MySQL database queries, fostering a 30% improvement in overall query performance.
- Established continuous integration and delivery pipelines with Jenkins and Git, cutting release times by 50%.

DXC Technology – Hyderabad, India

User Interface Developer

Jan 2020 – Aug 2021

- Enhanced website performance by reducing page load times by 30% through front-end code increments, improved asset management, and streamlined rendering techniques.
- Refined front-end code and asset management to ensure seamless performance across devices and browsers.
- Mentored junior developers and fostered effective teamwork through regular code reviews and Agile sprint planning.
- Dispatched AWS services, including CloudWatch and EC2, to deploy, monitor, and maintain highly reliable web applications.
- Optimized application performance by refining code structure and asset loading, achieving a 40% reduction in page load times.
- Integrated RESTful APIs with backend services, resulting in a 15% improvement in data retrieval speeds.
- Increased conversion rates by 10% through A/B testing and UI element adjustments using analytics tools.

ACADEMIC PROJECTS

Trading Recipe Application

- Developed a web platform using React.js, Node.js, and MySQL that enabled users to register, submit recipes, and engage through ratings and comments.
- Augmented user engagement by 35% by designing an intuitive and visually appealing interface that encouraged greater interaction and content sharing within the culinary community.

Online Book Reading Application

- Designed and built an interactive app with Angular and Spring Boot, featuring user authentication, personalized libraries, and a commenting system for book enthusiasts.
- Created an intuitive platform that empowered users to manage book collections and interact with a community of readers, receiving positive user feedback.
- Received positive feedback from over 90% of users corresponding to smooth navigation, intuitive design, and seamless user experience, making it a preferred platform for book enthusiasts.

Prediction of Student Placement

- Built a predictive tool using Python and machine learning models that allowed students to input data, complete aptitude tests, and receive tailored job placement insights.
- Empowered students with actionable recommendations, enhancing preparation strategies and supporting informed career planning.

EDUCATION

Master of Science in Computer Science

University of North Carolina at Charlotte | Aug 2021 – Aug 2022
