Dallas, TX

SUMMARY

- 5+ years of professional experience as a full stack developer, implementing and developing complex applications and participating in all phases of the SDLC including design, development, implementation, and testing. Hands-on experience in building microservices-based architectures for scalable deployments.
- Strong knowledge in Spring Framework including IOC, AOP, transaction management (declarative and programmatic), and Hibernate integration within Spring.
- Experience using React components, forms, events, keys, router, Redux, animations, and Flux architecture for dynamic UI development.
- Experience working with AWS cloud services such as EC2, EBS, S3, and Elasticsearch, along with project tracking and management using JIRA.
- Solid experience in Unix and Linux shell scripting including Bash and Perl for automation and system operations.
- Expertise in messaging systems such as Spring Kafka, Apache ZooKeeper, and JMS. Practical experience using Jenkins CI/CD pipelines and Docker for build automation and DevOps integration.
- Strong understanding of software design patterns including Singleton, Prototype, Facade, Factory, and Observer.
- Experience working with version control tools such as Git, SVN, and CVS.
- Extensive experience with IDEs including Eclipse and Spring Tool Suite.
- Hands-on experience in front-end technologies such as JavaScript, AngularJS, Bootstrap, HTML, CSS, jQuery, GWT, tag libraries, custom tags, and AJAX for responsive UI development.
- Good knowledge of Spring modules including Spring IOC, Spring MVC, Spring DAO, Spring Batch, Spring Web Flow, Spring Security, and Spring Boot. Experience using Selenium (IDE, RC, WebDriver), JUnit, and TestNG for unit and integration testing.
- Experience working in Agile environments with proficiency in Kubernetes for horizontal scaling and load balancing.

TECHNICAL SKILLS

- **Programming Languages:** Core Java, C, C++, SQL, PL/SQL, XML, XSL
- **Core Java Concepts:** JavaBeans, JDBC, Annotations, Collections, Exception Handling, Multi-Threading
- **Frameworks:** Spring, Spring Boot, Spring-Data, Spring JDBC, Spring Core, Spring MVC, Spring ORM, Spring AOP, Hibernate, JPA
- **Web Technologies:** J2EE, Servlets 2.4/2.5, JSP 2.0/2.1, JSTL, JDBC 2.0/3.0, Filters, Listeners
- **Frontend:** HTML4/5, JavaScript 1.8, CSS, jQuery, AJAX, BackboneJS, AngularJS2, EmberJS, NodeJS, ReactJS, JSON, TypeScript, XML, TLD
- **J2EE Technologies:** JSP, JDBC, JNDI, Web Services, BPM (Activiti), Hibernate
- **Tools:** Photoshop, Illustrator, InDesign, Fiddler, Firebug, Maven, ANT
- **Web/Application Servers:** WebLogic 7.0/8.1/9.0/10.0, IBM WebSphere 4.0/5.5, JBoss 4.0.5, Apache Tomcat 5.5/6.0
- **Development Methodologies:** Waterfall, V-Model, RUP, Agile, Scrum, Test Driven Development (TDD)
- **Web Services:** SOAP, SoapUI, WSDL, RESTful APIs
- **Version Control:** SVN, CVS, ClearCase, Git
- **Testing:** JUnit 4.1.2, JUnit-Perf, JMock, Cactus, Jasmine, Karma
- **XML Technologies:** XML, XSL, XSLT, DOM, JAXB
- **Databases:** Oracle 8i/9i/10g, MySQL 4.x/5.x
- **Cloud Platforms:** AWS

EXPERIENCE

Citizens Financial Group

Java Full Stack Developer

Jun 2024 – Present

Dallas, TX

- Developed AWS Lambda functions to manage and automate AWS service interactions for internal processes.
- Implemented second-level caching using Hibernate to significantly improve read performance and reduce database load.
- Contributed to migrating monolithic applications into Microservices architecture using REST APIs and Spring Boot.
- Implemented CRUD operations and large-scale data processing using Cassandra APIs and drivers.
- Built and integrated Apache Kafka message pipelines for real-time data streaming across distributed systems.
- Created MongoDB collections and developed Node.js/Mongoose services for storing and retrieving user data across multiple devices.
- Developed Spring Boot-based Microservices and deployed them on AWS EC2 using Jenkins CI/CD pipelines; monitored scalable infrastructure on AWS.
- Designed security layers using Spring Security and Spring Boot; developed reusable UI components in ReactJS with dependency injection and data binding.
- Utilized Angular 8 Reactive Forms for component-driven validation; participated in Agile (Scrum) ceremonies covering design, development, system testing, and UAT.
- Built SPA applications using Angular 4 with Microservices architecture backed by Cassandra DB and MySQL.
- Implemented Angular directives, routing, components, modules, providers, and services for SPA navigation and enhancements.
- Used Angular CLI and TypeScript to build components, controllers, and optimize performance with lazy loading.
- Used Spring Boot to build high-performance cloud-native Microservices with minimal configuration.

- Developed multiple React.js screens using NPM components and Redux for predictable state management.
- Utilized React Router and Axios extensively to synchronize UI views and handle API data exchange.
- Integrated Elasticsearch for caching to enhance query performance and reduce processing latency.
- Developed Node.js server-side proxy modules to observe request/response times and integrate business logic.
- Used Express.js to manage server routes, MVC structure, and REST endpoints; leveraged NPM tools such as Grunt and Express.
- Extensively used Angular HTTP services with Observables for real-time UI updates and integrated these with Spring Boot and Cassandra DB backend services.
- Applied Java 8 features including Lambda Expressions and Stream API for efficient data handling and functional programming.
- Developed REST APIs using Spring MVC and Spring Boot and deployed Microservices on Pivotal Cloud Foundry (PCF).
- Worked with Kubernetes clusters for deployment, and OpenShift for managing enterprise deployments; developed PL/SQL packages and UNIX shell scripts for batch processing and data migration.

Technologies Used: Angular, Apache Kafka, AWS, Cassandra, CI/CD, EC2, Hibernate, HTML, Java, Java 8, Jenkins, Kafka, Kubernetes, Lambda Expressions, Microservices, MongoDB, Mongoose API, MVC, Node.js, PCF, PL/SQL, React, Spring, Spring Boot, Spring MVC, Spring Security, SQL, Stream API

UnitedHealth Group

Jul 2023 - Jun 2024

Java Full Stack Developer

Dallas, TX

- Integrated JMS with Spring Boot using embedded ActiveMQ instances to enable asynchronous communication between distributed services.
- Defined resources and deployment settings using Azure Resource Manager (ARM) templates for provisioning virtual machine resource groups; worked with Jenkins, Docker, and OpenShift for CI/CD of Microservices.
- Developed Microservice-oriented applications with React.js on the frontend and Spring Boot services on the backend, ensuring modular and scalable system behavior.
- Built and implemented responsive web views using HTML5, CSS3/LESS, Bootstrap 4.0, and AJAX to enhance UI performance.
- Developed isomorphic responsive web applications using React.js for seamless experiences across desktops, tablets, and mobile devices; constructed Bootstrap UI components and rendered dynamic data from APIs into the virtual DOM.
- Implemented various user interface screens with React.js, leveraging NPM components and Redux libraries for state management.
- Utilized Redux architectural patterns (Reducers, Containers, Saga) to manage state within React-Native applications; created reducers to update the store state tree.
- Implemented routing and SPA behavior using React Router to synchronize view rendering with server-side data; applied Flux design patterns through Redux.
- Used Angular CLI to generate reusable components, services, and filters and deployed applications in multiple environments.
- Implemented Axios for asynchronous AJAX calls to fetch and update server-side data efficiently.
- Performed unit testing using Mocha and Chai to validate React.js components and ensure code reliability.
- Applied Microservices architecture using Spring Boot to build decoupled REST endpoints and integrated with Apache message brokers for inter-service communication.
- Worked extensively with Apache Kafka for messaging workflows; built Microservices supporting OAuth-enabled REST services and designed NoSQL data models with bloom filters and TTL columns.
- Utilized Subversion (SVN) for configuration management and Jira for agile task tracking and bug resolution.
- Created Low-Level Design (LLD) documents for both services and web applications; developed asynchronous RESTful Microservices using Spring MVC and Spring Boot consumed across distributed systems.
- Built REST web services using Node.js backend to handle AJAX requests from jQuery-based front-end components; supported automation using Jenkins CI/CD pipelines.
- Implemented Angular directives to provide real-time searching and filtering of loan program descriptions.

Technologies Used: Angular, Apache Kafka, Azure, Docker, Jenkins, Jira, JMS, jQuery, Kafka, Microservices, MVC, Node.js, NoSQL, OAuth, RESTful, Spring, Spring Boot, Spring MVC, SQL

Tata Consultancy Services

Jun 2021 - Aug 2022

Java Full Stack Developer

Chennai, TN

- Used Ion API with AWS services such as Amazon S3 for storing and retrieving Ion data, AWS Lambda for serverless execution, and AWS DynamoDB for NoSQL database operations.
- Designed and developed Microservices using Spring Boot 2.0 and Spring REST for scalable and modular application components.
- Worked with Node.js, React, and Backbone.js MVC frameworks to develop Single Page Applications (SPA) ensuring smooth client-side interactions.
- Utilized IntelliJ for development and debugging of Spring Boot applications; performed version control operations using Git.
- Built enterprise applications using Spring MVC, Spring IOC, Spring AOP, and Hibernate, ensuring modular design and maintainability.
- Participated in bug fixing during System Testing, Joint System Testing, and User Acceptance Testing; deployed applications and integrated third-party services such as AppDynamics on Pivotal Cloud Foundry (PCF).
- Developed automated validation services to generate JASPER reports using bean validations and Spring validations; implemented Java 8 features including Lambda expressions, functional interfaces, Stream API, Time API, concurrency improvements, and I/O enhancements.
- Designed and developed responsive web interfaces using HTML5, CSS3, JavaScript, and Bootstrap framework.

- Wrote optimized SQL queries on Oracle databases; built Java-based ETL solutions to extract, transform, and load JSON data into legacy and new SQL Server tables.
- Worked on AWS cloud configuration management and centralized logging integrated with Spring Boot and Java applications; built new user-facing features using React.js and Redux.
- Created reusable TypeScript components and services to consume REST APIs using Angular's component-driven architecture; developed JUnit test cases for DAO and service layer methods.

Technologies Used: AOP, AWS, AWS Lambda, CSS, CSS3, DynamoDB, Git, Hibernate, HTML, HTML5, IntelliJ, Java, Java 8, JavaScript, JSON, JUnit, Lambda Expressions, Microservices, MVC, Node.js, NoSQL, Oracle, PCF, React, Redux, S3, Spring, Spring Boot, Spring IOC, Spring MVC, SQL, SQL Server, Stream API

Apollo Hospitals

Jan 2020 – Jun 2021

Java Developer

Chennai, TN

- Implemented DAO pattern to fetch data from the database using Hibernate, reducing redundant database access statements and improving data access efficiency.
- Played a key role as a senior developer in building next-generation Microservices for highly scalable healthcare applications.
- Designed and developed a complete validation service to perform data validations on extracted, transformed, and loaded data, working extensively on Linux environments.
- Demonstrated strong command of CQL to execute queries on Cassandra clusters for large-scale distributed data processing.
- Worked with Jenkins for continuous integration using Gradle and GitHub to streamline build and deployment processes.
- Managed and resolved bugs using Jira, and developed REST-based Microservices using Java JDK 1.8 on IntelliJ with integration to Oracle databases.
- Developed and maintained responsive web applications using React.js, ensuring high-quality code delivery and timely completion of project milestones; performed page design using Oracle BPM.
- Built applications using Spring Web MVC, Spring Core, and implemented Dependency Injection using Spring Framework.
- Created JUnit test cases to automate testing of business logic and ensure application stability.
- Participated in requirements gathering, analysis, design, development, and testing using Agile (SCRUM) and Test-Driven Development (TDD). Hands-on experience with IBM MQ Series, ActiveMQ, Kafka, and JMS for middleware communication.
- Developed JASPER reports to present validation results and ensure high data accuracy. Performed UI and functional testing using Selenium and Firebug for web-based application verification.
- Implemented Microservices communication using synchronous HTTP and REST protocols, and integrated SOAP-based services where needed.
- Developed applications using J2EE, JSP, Servlets, and Spring Bean classes across enterprise modules.

Technologies Used: Cassandra, Git, GitHub, Gradle, Hibernate, IntelliJ, J2EE, Java, Jenkins, Jira, JMS, JSP, JUnit, Kafka, Microservices, MQ Series, MVC, Oracle, React, Selenium, SOA, SOAP, Spring

EDUCATION

Master of Science – Computer Science

Aug 2022 – May 2024

Texas Tech University

GPA: 3.66

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- IBM Data Analyst
- IBM Data Science
