

PROFESSIONAL SUMMARY

- 7+ years of **Quality Assurance Testing Experience** - Manual & Automation Testing Efforts
- Creating and directing software development methodologies and standard of testing process (**SDLC/STLC**)
- Experience creating and maintaining **web-based, client/server, mobile** and **multi-tier** systems and applications.
- Experience **creating verifications and validations** amongst applications within **Financial Services** and **Hospitality/Travel** domains.
- Ability to understand **backlogs, business requirements, use case, user stories** and estimation for delivery commitments.
- Familiar with Test Methodologies such as **Test-Driven Development & Data-Driven/Keyword-Driven Development**.
- **Test Methods: Black Box Testing**, White Box testing, UAT, **End to End**, Integration, Exploratory, Ad-Hoc, **Smoke & Regression**
- Experience with test automation framework design and execution from proof of concept to implementation phases of project.
- Experience using test management and bug tracking tools for monitoring, tracing and reporting – **Bug Life Cycle**
- **Tools: Maven, Selenium WebDriver, JUnit/TestNG, Git/GitHub, Jenkins, JMeter, JIRA, Confluence, SharePoint, F12 DevTools.**
- **Test Documents:** Test plans, test suites, **test cases, test scenarios, test scripts, RTM**, test data, risk analysis and defect reports.
- Experience analyzing, interpreting and verifying **technical documentation** such as business requirements, functional requirements, wireframes and high-fidelity mockups, system data flow diagrams and database schema/relationships.
- Ability to **set priorities, multi-task** in a **fast paced environment** and work independently with minimal supervision.
- Ability to **work under pressure** with a calm demeanor through the use of analytical, problem-solving and interpersonal skills.
- Led and participated in client meetings.
- Led Team presentations and meetings amongst core product testing.

WORK EXPERIENCE

The Bank Of London, SDET Lead/QA Manager

Charlotte, NC 06/2021 – 06/2024

- Validated **web based, mobile, SAP, API, cloud, and client/server based applications and systems.**
- **Validated KYC and AML criteria for products.**
- **Simulated thousands of test data for pseudo based account variables for product openings.**
- Worked closely with the **Chief Technical Officer, Chief Business Officer, Product Manager, Operations Manager, and Development Team.**
- Responsible for creating clear **test framework, test plans, test data, presentations, test cases, & training manuals.**
- Created **java frameworks** and worked with **robot frameworks.**
- Managed a strong **communication** between our **offshore** team with different time zones.
- Thoroughly tested applications to ensure compliance with **established requirements and design/UX documentation.**
- **Discovering, replicating, investigating and thoroughly documenting any defects utilizing required software tools.**
- Lead quality assurance **review meetings**, presenting documentation detailing test results and their **impact on respective release schedules and project deadlines.**
- **Created Manual testing procedures for product features as well as finalizing agreement amongst business and development teams for the release.**
- **Created automated suites from manual test cases.**
- **Created and led system, functional, security, black box, End to End, ad hoc, UAT** (user acceptance testing), and **regression testing.**
- Created procedures for **GUI, Functional, performance, and non-functional testing on Android and iOS** devices (smart phones, tablets) for our products.
- Performed **Web Service testing** using **Advanced RESTClient/POSTMAN** and validated **GET, PUT and POST Methods.**
- Developed and **executed performance test script scenarios** based on the **business requirements and specifications.**
- Wrote and executed **SQL, PostgreSQL, NoSQL, and MySQL Queries** to perform **database testing and data validation working with various data types.**
- Developed automated test cases using the **Selenium WebDriver, API, Visual Studios, TestNG, Django, Flask, pytest and other open source tools.**
- Created testing script using **Element Locators WebDriver methods, Java/python programming features and TestNG Annotations/pytest.**
- Created data driven, keyword driven test scripts with functions and **verification** points to **validate** Expected Test Results.
- Organized test suites for both unit and **integration** testing.
- Ensured high quality releases from **user story development** to post deployment verification.
- Coordinated with the development team for bug fixing and preparation of Test Execution Report.
- Initialized **gherkin** to automated test scripts.
- Experienced with initializing and integrating scripts to test runners (Jenkins).

- Validated web based, mobile, API, cloud, and client/server based applications and systems.
- Worked closely with the Scrum Master, Product Team, Operations Team, and Development Team.
- Responsible for creating clear test plans, test data, presentations, test cases, & training manuals.
- Thoroughly tested applications to ensure compliance with established requirements and design/UX documentation.
- Discovering, replicating, investigating and thoroughly documenting any defects utilizing required software tools.
- Participated in quality assurance review meetings, presented documentation detailing test results and their impact on respective release schedules and project deadlines.
- Manually tested product features and got them approved for the release.
- Developed automated test cases using the Selenium WebDriver, API, Eclipse, TestNG and other open source tools.
- Using Element Locators WebDriver methods, Java programming features and TestNG Annotations.
- Created data driven test scripts with functions and verification points to validate Expected Test Results.
- Ensured high quality releases from user story development to post deployment verification.
- Coordinated with the development team for bug fixing and preparation of Test Execution Report.

Carnival Corporation, QA Tester

Miami, FL 12/2017 – 01/2019

- Contributed to robust, scalable, reusable and high quality test automation solutions across various browsers and platforms.
- Coordinated with the client team for application configuration issues, defect analysis and timely release of test versions of application.
- Assisted team members with acceptance criteria, user stories, wireframes, test artifacts, project estimation & release schedules.
- Analyzed and reviewed system requirements, functional specifications and design documents.
- Performed functional and nonfunctional testing of system modules in the form of smoke, sanity and regression test suites.
- Conducted automated system/integration testing using Postman, Newman and SQLDeveloper.
- Performed backend testing of database schema/models through the use of DML and SQL queries.
- Managed, developed and reviewed test artifacts such as test scenarios, test cases, test scripts, test data and test report metrics.
- Attended QA related sprint planning, backlog grooming, sprint review and retrospective meetings to discuss priorities & estimation.
- Involved in defining test scope, risk analysis/mitigation, dependencies and constraints for product features and functionalities.
- Prepared and facilitated distribution of timely test reports and status updates across Desktop, Web and Mobile platforms.
- Tech Stack: AngularJS, RxJS, jQuery, C#, .Net Core, Microsoft IIS, Nginx, Sitecore, Akamai, New Relic, Optimizely, Azure DevOps

EDUCATION

Bachelor of Science in Physics, The **City College Of New York** - New York, NY

TECHNICAL SKILLS

Web Technologies:	HTML5, CSS3, JavaScript, Bootstrap/CSS Grid/Flexbox, React/Angular, NodeJS/Express, Java/Thymeleaf/Spring, C#/.NET Core, TCP/IP, AJAX, HTTPS, SSH, DHCP, DNS, SFTP, JSON/XML, RESTful Web Services
Software Testing Tools:	JIRA, Confluence, HP ALM (Quality Center), Visual Studio Code, Eclipse/IntelliJ, TestNG, Selenium WebDriver, Mocha/Chai, Cypress/Protractor, Postman/Insomnia, RestAssured, JMeter
DBMS/ORM Tools:	MySQL, MS SQL Server, Oracle 10g/11g, Mongoose/MongoDB, JPA/Hibernate, DBeaver/SQL Workbench, SQLDeveloper
Web & App Servers:	Tomcat/Jetty, Oracle WebLogic, IBM WebSphere, Microsoft IIS
Continuous Integration:	Git/GitHub, GitLab CI/Jenkins/TeamCity
Operating System:	Windows 10/8/7, Windows Server 2008, macOS, iOS, Android, Unix/Linux
Other Software:	Terminal/Bash, Google Suite, Microsoft Office Suite, Slack, Snipping Tool, Camtasia/Snagit
