

Manasa S
Sr. QA Automation Engineer
manasareddyseelam01@gmail.com
662-471-9890

PROFESSIONAL SUMMARY:

- **10+ years** of demonstrated success in testing complex software applications using **Manual testing** techniques and **automated testing** tools.
- Good knowledge of Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC) and Concepts.
- Proven ability in designing and creating automation frameworks for UI's, REST services, API's, ETL applications using **CypressJS, XCTest, Appium, Java RestAssured, Selenium WebDriver, TestNG, JUnit, Jenkins, Cucumber** and **SOAP UI**.
- Experience testing both **Android and IOS apps** using **Appium** client and server and worked with **webdriver.io**.
- Strong understanding of iOS utilizing **XCTest** framework and running applications through Xcode.
- Experienced in customizing **Selenium with POM** to suit in testing environment.
- Expert knowledge using **Java RestAssured, TestNG, JUnit, Selenium Webdriver** and **boto3** libraries.
- Pretty good experience working with ETL pipelines, reading different files, processing using Microsoft **SSIS** packages using complex SQL Queries and inserting into **MS SQL Server**.
- Excellent understanding of **Software Development Life Cycle** and **Test Methodologies** from project definition to post-deployment documentation.
- Tested and validated services running on AWS including **AWS Lambda, API Gateway, S3, IAM, Cloudwatch, SNS, SQS, EC2** and **RDS**.
- Experience in working with Build Systems like **Ant, Maven, Gradle** and continuous integration systems like **Jenkins**.
- Experience working with Static code analysis tools like **SonarQube** and integrating into Enterprise Continuous Delivery (ECD) workflows.
- Comfortable working with **SQL** developed complex queries using **joins, aggregations** and **window functions**.
- Worked with Apache JMeter and Gatling tools for load and performance testing of REST Api's and Kafka subscribers.
- Good experience in Web Services testing using **SOAP UI, XML** and **WSDL**; and in providing required input data to request **XML** & get the required data from response **XML** & use the response data from other request **XML** using **SOAP UI**.
- Ability to locate the objects based on ID, Name, XPath, and CSS elector, Link, Partial Link, Attributes and Tags.
- Experienced in **Web Service testing** by using **Soap UI and POSTMAN**.
- Experience testing embedded software in regulated healthcare environments with focus on FDA and ISO 13485 compliance.
- Strong collaboration with R&D teams to ensure safety, traceability, and reliability in life-critical medical device software.
- Experienced in handling dynamic Drop-down, Auto-suggestive Drop-down, Radio buttons, Calendar UI, Alerts, and switching between a parent & child window.
- Experienced in testing and handling different frames (frames, iframes) of a HTML page with having different DOMs for every iframe.

- Experienced working on Agile and Extreme methodologies using **TDD, SCRUM, MDD**, etc.
- Proficient in Functional, Regression, Exploratory, Integration, Manual, System, End-to-end, Progression, Security, Business Process.
- Experience working with Apache JMeter for load and performance testing.
- Experience use of **Java Programming & Java Scripting, Python** for designing automated Scripts.
- Experience in creating **Requirements Traceability Matrix** to ensure comprehensive test coverage of requirements.
- Experience in preparation of test cases and execution and preparing **Test Plan documents**.
- Communicate and follow up with development/engineering team on issues discovered during the test process.
- Highly adaptable and adept at building good working relationships.
- Good at **multi-tasking** and works well under tight deadlines with **high efficiency**.
- Excellent Troubleshooting Skills. Strong reporting and analytical skills

TECHNICAL SKILLS:

Programming Languages	JS, Java, SQL, Python
Test Tools	Postman, Soap UI, Apache JMeter, Appium Server & Inspector
Test Build & Integration Tools	Maven, Jenkins, SonarQube, Team city
Test Frameworks	CypressJS, Appium, WebDriver.io, PlayWright, XCTest, TestNg, RestAssured, Cucumber, Robot
Databases	Oracle, Microsoft SQL Server, Postgres, MYSQL, MongoDB
Cloud Services	AWS Lambda, API Gateway, SNS, CloudWatch, IAM, S3, EC2, RDS
Markup Languages	HTML, XML, XPath
Operating Systems	Windows, Mac, Linux
Defect Tracking tools	JIRA, HPQC/ ALM, MTM, TFS
MS Office Tools	Outlook, Word, Excel, PowerPoint.
Project Methodologies	Agile-Scrum, Waterfall model

PROFESSIONAL EXPERIENCE:

Meta/Facebook, IN / Remote

Jan 2022 – Present

Role: Sr QA Engineer

Responsibilities:

- Responsibilities for creating both manual and automated test suites for the entire project
- Worked with Business users and SME to design and implement the test plan
- Extensive experience in Functional, Integration, Regression, User Acceptance (UAT), System, Load and Black Box testing.
- Tested various front end mobile app functionalities using Appium client/server and using Appium inspector.
- Utilized Appium framework with various locators and developed test cases for both Android and IOS.
- Utilized Webdriver.io framework along with Appium framework to have a unified testing approach across IOS and Android.
- Evaluated the functionality of various ad services running on AWS services including AWS Lambda, API gateway using both manual testing by Postman and automated testing using Java RestAssured.
- Implemented various automation tests using Java RestAssured with various annotations for

grouping and priority.

- Looked into various test case failures on AWS cloud watch and validated the alert system of AWS SNS by raising these errors.
- Tested the performance of various Rest API's using Apache JMeter and generated the statistics reports at end.
- Worked on scheduling the JMeter JMX files in Jenkins to run periodically to run and compare with baseline scenarios.
- Did distributed load testing using Apache JMeter master-slave architecture on the cluster of machines.
- Created Jenkins regression test suite and scheduled them to run periodically and monitored the failures.
- Analyze requirements and user stories before the build, by collaborating with product owners and business analysts.
- Utilized BDD framework Java Cucumber with different steps and feature files. Utilized TestNG for various asserts and annotations.
- Actively participate in sprint planning to provide sizing of the testing stories of the sprint
- Responsible for creating test scenarios for user stories and creating automation test suites using Java and RestAssured framework
- Extensively used Page Objects Design and Page navigation framework for test scripts using POM-Page Object Model and data driven to test web and mobile application.
- Thorough understanding of POM using Page Factory
- Responsible for executing test cases, analyzing test failures and report issues, and defects through JIRA
- Utilized Robot framework with scenario files and keywords to develop and run the test cases.
- Maintenance the Regression test suite which should be run before every release, report any regression defects and get them fixed before the release.
- Analyzed and tested data on different case and functionality manually write queries on database for validating data
- Execute various SQL queries to validate data and use for data driven testing using Oracle SQL
- Creating regression test sets for various test projects and updating test set after each test cycle.
- Used postman for testing APIs, by sending requests to the web server and validating XML and JSON responses.
- Integrated with continuous integration tools like Jenkins for running tests on regular basis automatically.
- Tested high performance backend webservices that are used for trading using JMeter.
- Tested various AWS API endpoints being processed by AWS Lambda and validated the responses.

Environment: Appium, WebdriverIO, Java RestAssured, Apache JMeter, Postman, Robot Framework, Cucumber, TestNG, Jenkins, AWS (Lambda, API Gateway, CloudWatch, SNS), Oracle SQL, Java, SQL, XPath, JSON, XML, POM, Page Factory, Windows, Chrome, Firefox, Agile, JIRA.

Morgan Stanley, NY

Sep 2019 – Dec 2021

Sr. QA Automation Engineer

Responsibilities:

- Involved in analyzing Business Requirement Documents and Technical Specification document and developed test plan and test cases for testing the application.
- Developed **Playwright** test cases for frontend by record and codegen option and modified the generated code for parameterization.

- Worked with emulators for testing the mobile device with PlayWright framework.
- Participated in requirement reviews and analyzed Modification requests and Enhancement requests.
- Tested independent and dependent modules individually. Prepared **Test Matrix** to keep track of the requirements and the test cases.
- Worked on **Appium** framework in testing mobile app for both **IOS** and **Android**.
- Used **Appium Server and Inspector** and configured to connect with the simulator.
- Utilized **CypressJS** framework for testing web front end pages by using retries and screenshots for failures.
- Worked with multi-threading approach to test the performance of REST API's using custom framework and see whether application libraries are thread safe.
- Integrated Automation scripts CypressJS for UI along with database accessors for verification in **Continuous Integration tools (Jenkins)** for nightly batch run of the Script. Created Project plan on **Jenkins**.
- Developed test automation scripts using **Selenium WebDriver** for regression and performance testing of the various releases of the application.
- Involved in creation of automation framework in **CypressJS** using behavior driven approach with **Cucumber**. Parameterized test cases using different keywords.
- Worked on complex ETL pipelines reading different file formats like CSV, Avro, Parquet formats and loading them into MS SQL Server using Microsoft SSIS Packages
- Worked with dimensions and facts and validated the different stages in ETL pipelines and confirmed the data is loaded correctly.
- Used JMeter to test the performance of REST API's and generated report of time consumed and posted the report on confluence pages.
- Automated the ETL testing pipelines thru Python and Jenkins pipelines.
- Worked on complex sql queries with different types of joins, like inner, outer and aggregations to verify the final data is loaded correctly.
- Developed manual and automated test cases to validate RESTful API web service. Validation was performed using Postman and custom-written python scripts.
- Worked on **Cross Browser testing** through CypressJS by testing the website on different browsers like Chrome, IE, and Firefox.
- Implemented **Appium** scripts to test **IOS** and Android platforms.
- Developed **Test Framework** in **Playwright** for **UI Regression Test Automation** and when necessary, and potentially execute automation.
- Done SOA testing for Payments API's using SOAP UI and Java framework for web services testing.
- Developed data **driven test scripts** to check the same functionality with multiple sets of data.
- Developed test suite, test cases, execute test cases and generate report in **Postman**.
- Performed xml data validation using assertion method in **Postman**.
- Performed Assertions like Schema Compliance, XPath, and SOAP responses.
- Developed user-friendly and flashy **XSLT reports** using TestNG and Maven.
- Involved in writing automation scripts for mobile native applications using **Appium, Core java**.
- Conducted **System Testing** and **User Acceptance Testing** for every client and Conducted Backend testing writing extensive **SQL queries**.
- Checked the data flow through the front end to backend and used SQL queries, to extract the data from the database.
- Involved in **documentation** as to how to maintain and run scripts for future enhancements. Responsible for testing the application against different environments in **QA, staging and production**.

Environment: Playwright, Appium, CypressJS, Selenium WebDriver, Cucumber, Jenkins, Postman,

Python, SOAP UI, Java, SQL, Oracle, MS SQL Server, SSIS, JMeter, XPath, XSLT, Maven, REST API, SOAP API, JSON, XML, Chrome, Firefox, IE, Windows.

Almac Health, PA

Jan 2017 – Aug 2019

QA Automation Engineer

Responsibilities:

- Responsible for preparation of Test cycle/progress reports, analysis of defect metrics & implement improvement actions for next iterations.
- Tested and verified various software components being migrated to AWS infrastructure including REST Services, ETL pipelines and batch jobs.
- Tested & validated performance of various services using Apache JMeter and found the bottlenecks to be improved upon.
- Created JMeter jmx files for testing the performance to compare with baseline scenarios for any changes and scheduled these to run daily as part of Jenkins.
- Performed different ETL testing of dimensions and facts of various securities data including stock, bonds and treasuries.
- Developed test code in Java language using **VS Code** IDE, Kafka events framework and TestNG framework.
- Developed complex SQL queries with inner/outer joins, aggregations and window functions to compare the data across the systems.
- Utilized Python Pandas data frames to load data from files and compared source and destination.
- Worked with AWS Lambda, S3 and Event manager to start the ETL pipelines for csv, Avro and Parquet data.
- Tested and validated close to 200 customer reports and scheduled these automation frameworks as part of Jenkins pipeline.
- Involved in designing and implementing of **hybrid automation** framework to be used with **AWS cloud services**.
- Implemented and worked on Acceptance Test Driven Development (TDD) agile methodologies completing releases ahead of schedule.
- Worked in testing the processing of batch files in reading and then ETL processing using Spark applications with Apache Airflow job scheduler.
- Worked with complex queries to verify/validate the data is processed correctly and scheduled these test cases to run in Jenkins pipelines.
- Tested various changes in SQL stored procedures by doing A/B testing along with performance testing.
- Worked with Testing Coordinator and others to ensure use cases and test cases are written correctly to ensure complete test coverage.
- Created End to End, Functional & UAT test cases as per the requirements. Involved in production smoke testing and sanity testing.
- Collaborated with cross-functional R&D teams to test embedded software modules in healthcare applications, ensuring compliance with regulatory standards like FDA and ISO 13485.
- Designed and executed both manual and automated test cases for safety-critical components of life-saving devices, focusing on functionality, reliability, and traceability.
- Maintained a detailed Requirements Traceability Matrix (RTM) and supported verification protocols to ensure full coverage and audit readiness.
- Participated in root cause analysis, defect resolution, and risk mitigation for embedded systems used in continuous renal replacement therapy (CRRT) devices.
- Authored verification reports executed validation procedures, and documented evidence to support successful regulatory audits.
- Developed JavaScript in **Postman** tool to validate the responses of Web Services.

- Responsible for fixing and maintaining regression automation test scripts for end-to-end testing.
- Involved in testing of web application by creating XML test suite.
- Used **JIRA** for bug tracking and reporting, also followed up with development team to verify bug fixes and update bug status.
- Closely involved with development team, maintenance team and business team regarding changing **requirements, builds and releases**.

Environment: AWS (Lambda, S3, EventBridge), Apache JMeter, Jenkins, Java, TestNG, Python, Pandas, Kafka, Apache Spark, Apache Airflow, SQL, Oracle, Postman, JavaScript, XML, VS Code, ETL, JSON, REST API, JIRA, Windows.

Divi's Laboratories, India

Jan 2015 – Oct 2016

Role: QA Analyst

Responsibilities:

- Followed Agile testing methodology, participated in daily Scrum meetings and tested each Sprint deliverables.
- Writing, Reviewing & Executing test cases, test scripts for Functional, Integration, System, GUI, Analysis of Business and Requirement Specifications.
- Performed functional testing to identify various critical points in the Application and automated it by using **Selenium WebDriver**.
- Developed test code in Java language using **Eclipse, WebDriver and TestNG** framework.
- Involved in implementation of Test Automation Framework build using **Selenium WebDriver, TestNG and Maven** technologies under **Java** platform utilizing industry leading harness design patterns and approaches.
- Tested Web Services using **Soap UI** tool, validating WSDL, request and response.
- Created Test plan, High level scenarios, test case construction and test estimates, resource estimates and weekly status reports.
- Conducted Test Case walkthroughs to achieve consensus on Test Case correctness & completeness ensuring width and depth of test scenarios.
- Designed and developed Automation Framework (Hybrid, Keyword-driven) using **Selenium WebDriver**.
- Involved in performing Functional testing, Regression testing, System testing, Integration testing, Security testing, Configuration testing, GUI testing and User Acceptance testing.
- Developed automation test scripts using **Selenium, Java, TestNG** and Cucumber as part of Acceptance Test Driven Development (ATDD).
- Involved in using of Git as version control tool, **GitHub** as repository.
- Created Test Automation Framework using **Cucumber, Selenium WebDriver, TestNG and Maven**.
- Worked on Web services using **POSTMAN** exclusively on obtaining the needed information using the **URL** approach.
- Tested compatibility of application for dynamic and static content under various cross browsers using HTML ids and XPATH in **Selenium**.
- Used **Postman** for API testing to verify the CRUD operations.
- Implemented Automated execution of tests (nightly and need based) using Maven and **JENKINS**.
- Reported software defects using **JIRA** and interacted with the developers to resolve technical issues.

Environment: Selenium WebDriver, Java, TestNG, Cucumber, Maven, Eclipse, Postman, SOAP UI, HTML, XPath, Git, GitHub, JIRA, Jenkins, Agile, REST API, WSDL, XML, Windows, Chrome, Firefox.
