

Manideep Bheemanathi
+1 (972) 853-3894
bmani197709@gmail.com

PROFESSIONAL SUMMARY:

- With **10+ years** of experience as a Senior Java Full Stack Developer Specializing in **Object-Oriented programming** design and development of multi-tier distributed and enterprise applications using **J2EE/J2SE**. Strong expertise in Object-Oriented Design(OOD), Object-Oriented Analysis(OOA) and creating Unified Modeling Language(**UML**) diagrams.
- Strong Expertise in **web development** applications using **J2SE, Servlets, JSP, EJBs** (Session Bean, Entity Beans, JMS/MQ Series), JDBC, XML, XSD, XSLT, RMI, JNDI, Java Mail, XML Parsers (DOM and SAX), JAXP, JAXB, Java Beans.
- Experience in GCP environment in particular Google Big Query, Google pub/Sub, Google spanner, Dataflow, Compute Engine, Google storage.
- Experience in using various Amazon Web Services (AWS) like **EC2** for virtual servers, **S3**.
- Expert level coding skills in web application development using **Struts, spring, JSF**, Custom Model view Controller (MVC) and **Hibernate** frameworks.
- Extensive experience in front-end technologies like **JQuery, Ajax, JavaScript, NodeJS, ReactJs, BackboneJs, Angular 2-9**.
- Track record of successfully implementing **SOA** and Web Services using **JAX-WS, AXIS, RESTFUL**, and **SOAP**.
- A track record of success using J2EE technologies to create a range of design patterns, such as **Value Object, DAO, DTO, Adapter, Command, Singleton, Factory**, and **MVC**.
- Practical familiarity with relational databases such as **Oracle, IBM DB2, MySQL**, and **SQL Server**, as well as **PL/SQL** stored procedures and packages, and NoSQL databases such as **MongoDB** and **Cassandra** and creating these databases for open-source projects is part of this experience.
- A wealth of knowledge about **Elastic Cache, SNS, SQS, Cloud Watch, Cloud Front, IAM, S3**, and **Amazon RDS**, among other Amazon Web Services (AWS) features.
- Experience with REST-based Microservices using JAX-RS, **Spring Data, Swagger**, and **Spring Boot** in conjunction with Java Persistence API (**JPA**) to interface with the API endpoints of the microservices.
- Prior script automation experience for testing **REST** and **SOAP** based APIs.
- Proficiency with **Docker** containers, **AMIs** for building Docker images, and the Kubernetes container orchestration system.
- Expertise on servers using **Apache Tomcat & HTTP Server, Web Sphere, WebLogic & JBOSS** Application server.
- Involved in development of SOAP & REST based web services using **WSDL, SOAP, JAXB, CXF, AXIS, JAX-WS** and Restful web services using JAX-RS, CXF and **JERSEY** APIs.
- Experience in integrating the internal security model into new projects with Spring Batch, Spring Micro services and Spring Boot.
- Experience in solving software design issues by applying **GOF Java & J2EE** design patterns including Singleton, Factory, Session Facade, MVC, Front Controller, Proxy, Service Locator, Builder Pattern, Business Delegate, DTO, DAO, VO and Command Patterns.
- Extensive expertise in Online Analytical Processing (**OLAP**) and online transaction processing (**OLTP**) in Data warehouses to build data models.
- Extensive expertise in project object models (POM) to build the code by using Maven and Ant and also used Jenkins for continuous integration.

- Involved in Rule project design, Orchestrate, Authorization, debugging for launch configuration for rule project analysis reporting, execution and publish to JRules team server.
- Expertise in Unit testing using **JUnit & Mockito**, **Integration** testing & **smoke** testing etc.
- Proficient experience in using java development IDEs like **Eclipse**, **My Eclipse**, **Net Beans**, **VScode** and **RAD**.
- Proficient in **Asynchronous messaging** using JMS and IBM message queue (MQ) Series.
- Database Design, data modeling, data transformation and data Migration in the databases includes Oracle, DB2, MySQL and SQL Server.
- Performed Database operations like **normalization** and written SQL queries and PL/SQL – **Stored Procedures, Functions, Triggers, Sequences, Indexes, cursors** and **Views**.
- Proficient expert in following coding guidelines and fixed the Check styles, PMD & Bugs.
- Working skills on implementation of the version control tools like **CVS**, **VSS**, **SVN**, **GIT**, **GITHUB** and **ClearCase**.

TECHNICAL SKILLS:

Programming Languages:	C, C++, Java, J2EE, PL/SQL.
Tools and Framework:	Spring, Hibernate, Spring MVC, Spring Web Flow, Spring IOC, Spring AOP, Spring Security, Struts, Apache Camel, JUnit, SOAP UI.
J2SE/J2EE Technologies:	Java, J2EE, RMI, Sockets, JDBC, Servlets, JSP, JMS, Java Beans, JSTL, Struts, EJB, Spring, Hibernate, JTA, JNDI, JPA, Web Services (JAX-RPC, JAX-WS, SOAP, REST, WSDL, UDDI and RESTFUL).
Web Technologies:	HTML5, CSS3, JavaScript, JQuery, Bootstrap, AngularJS, AJAX, NodeJS, JSON.
XML Technologies:	XML, XSL, DOM, SAX, DTD, XQuery, XSD and XSLT.
Cloud Technologies:	AWS EC2, S3, Dynamo DB, ELB.
Databases:	Oracle, MySQL server, MS SQL, IBM DB2, MongoDB.
Web/Application Servers:	Apache Tomcat, IBM WebSphere, Glassfish, Web logic Application server, JBOSS.
Build Tools:	ANT, Maven, Gradle and Jenkins.
IDE / Tools:	Eclipse, IntelliJ, Spring Tool Suite (STS), RAD.
Testing Tools/ Others:	JUnit, Mockito, Soap UI, Log4j and JIRA.
Version Control:	Tortoise SVN, CVS and GIT.
Platforms:	Windows, Mac, Linux and Unix.
Methodologies:	Agile, Waterfall, Test Driven Development.

PROFESSIONAL EXPERIENCE:

Client: Charter Communications, Denver CO.
Sr. Full Stack Java developer

Jul'2022 - Present

Responsibilities:

- Applied agile methodology to the software development life cycle, including design, development, and testing.
- Built design wireframes using Angular 11 and set up services for Spring Boot backend communication.
- Utilized NodeJS for authentication, authorization, session management, and as a server-side proxy to monitor response times.
- Developed UI services using Angular 11 to facilitate data retrieval and storage from the backend with customer-side validations.
- Created enterprise-level REST APIs in Spring Boot using a single architecture to integrate third-party data providers.
- Added auditability elements to the shared framework, storing application usage data in MongoDB and moving data to Hadoop clusters using AutoSys Jobs.
- Managed the development of Angular 12, Typescript, SCSS, HTML5, PrimeNG, and RxJS front-end user interfaces.
- Created RESTful applications using Java 8 with a Microservice architecture.
- Developed Microservices with Spring Boot and Spring Cloud, deployed on AWS Cloud infrastructure.
- Set up and maintained REST APIs created with Spring Boot on Pivotal Cloud Foundry.
- Created Reactive Forms in Angular with a focus on component-based validation for enhanced UI functionality.
- Built presentation and layout using jQuery, Ajax, HTML, CSS3, and JSP.
- Developed and tested business applications using Angular 11, Spring MVC, and jQuery.
- Contributed to CI/CD deployment by adjusting Jenkins files to meet pipeline requirements.
- Gained experience in OpenShift commands and Kubernetes for deployment tasks.
- Implemented Java EE components using Spring MVC, Spring IOC, Spring transactions, and Spring Security modules.
- Developed Python code using Flask to access RESTful APIs.
- Set up S3 buckets for EBS-backed snapshots and implemented versioning for data backups, extending the AWS cloud infrastructure.
- Used Embedded ActiveMQ instances to link Spring Boot and JMS.
- Utilized Hibernate annotations with Spring IOC for effective database object mapping.
- Deployed and maintained applications on Cloud Foundry and AWS.
- Managed AWS infrastructure, including EC2 instance databases.
- Created interfaces for mass updating properties and managing user menus using NodeJS and jQuery.
- Maintained communication with stakeholders, managing tasks, issues, and bugs using JIRA.
- Developed comprehensive test cases using JUnit to simplify Jenkins deployment.
- Managed CI/CD procedures with Jenkins for seamless integration and deployment.
- Integrated Netflix Zuul with Spring Cloud to enhance communication and streamline microservice development.
- Ensured data integrity with batch loading and verification on Apache Cassandra clusters.
- Deployed apps using Docker containers for seamless collaboration in hybrid cloud environments.

Environments: *Java 8/11, JavaScript, Python, HTML5, CSS3, AJAX, Bootstrap, jQuery, Spring Security, JIRA, Rabbit MQ, Node JS, Express JS, HTML5, Bootstrap4.0, IntelliJ Eclipse Java EE, Jenkins, Log4j, Mongo DB, AWS, Oracle, JBoss, Kibana, Elastic search, EBS, Elastic Load Balancer, Docker, Apache tomcat, Selenium, Spock, AWS Cloud, Angular 11, Jasmine, Mockito, JUnit, mock MVC, Kubernetes*

Client: Truist Bank, Raleigh, NC
Full Stack Java Developer

Oct'2020 - June'2022

Responsibilities:

- Applied agile methodology to understand the SDLC.

- Handled high-traffic scenarios and leveraged microservices to shift user-specific data from service instances into a common.
- All functionalities are implemented using Spring IO, Spring Boot, and Spring JDBC.
- REST and SOAP services were developed.
- Created HTTP requests using the RxJS Observable framework to handle multiple values over time.
- Created project prototypes and skeletons using Angular 2, jQuery, HTML5, and CSS3.
- Used various jQuery and Bootstrap plug-ins, including date pickers and Bootstrap selectors.
- Implemented Spring IOC for Dependency Injection, used Spring AOP for logging, and made the code loosely linked.
- The SOAP protocol's performance was confirmed using JMeter, and JAX-WS Web services interfaces based on SOAP were put into place for code reuse and system integration.
- Using online and mobile applications, we developed RESTful web services that implement JAX-RS using Jersey and produce XML and JSON files to do tasks.
- Business components were developed using Hibernate/JPA, Spring Boot, Spring IOC, Spring AOP, Spring Annotations, Spring Cloud, and RESTful Web Services.
- A thorough understanding of cloud security, including how to use the Windows and Linux CLI (command line interface) and AWS console.
- Added OAUTH support to the Security program.
- Employed JAX-RS to create a Restful web service using the OAuth2 Security Framework for authentication.
- Took the initiative to learn how to reply to native speakers and went on to develop multiple features under minimal guidance.
- Write complex SQL Server queries, triggers, and stored procedures.
- Stored procedures were used for applications that required to be executed as part of scheduling techniques.
- Microservices Docker container based on Spring Boot was deployed via Amazon EC2 container services and the AWS admin panel.
- Created, retrieved, updated, and deleted documents using MongoDB.
- Node JS received modules that enable integration with designs and standards.
- Integrated Microservices with the system's present architecture. Microservices business components and RESTful service endpoints were developed with Spring Boot.

Environments: *Java 1.7, Spring 4, Hibernate 4.2, Spring batch, Spring Boot, JPA, JMS, ReactJS, HTML5, CSS3, Eclipse, Oracle 10g, Swagger UI, Log4j, JIRA, Pure XML, Web Services, Kafka, Node Js, Microservices, REST UI.*

Client: Birlasoft, Hyderabad, India

May'2017 - Sep'2020

Java Developer

Responsibilities:

- Involved in SDLC using Agile methodology, covering project design, development, implementation, and testing.
- Developed sequence diagrams, test cases, use cases, class diagrams, and process flow diagrams using Rational Rose.
- Designed and implemented UI using HTML5, CSS3, JavaScript, XHTML, XML, JSP, AJAX, and Bootstrap for responsive design.
- Developed administrative UI using AngularJS, applying external CSS for styling.
- Built client-side applications with AngularJS using MVC architecture and integrated Bootstrap for styling.
- Designed and developed REST-based microservices using Spring Boot, Spring Data JPA, and Swagger for API documentation.

- Utilized Spring framework for backend development, integrating with databases using Hibernate and performing CRUD operations.
- Implemented Spring concepts such as Dependency Injection, AOP, and Spring MVC for efficient application design.
- Designed and implemented SOAP and RESTful web services using WSDL, CXF, and JAX-WS/JAX-RS for API interaction.
- Consumed and produced SOAP/REST web services, handling message payloads via JMS to track milestones and statuses.
- Used Maven for building and deploying applications, managing dependencies for smooth development cycles.
- Configured WebSphere server, including queue setups and application deployment.
- Wrote and executed unit and functional test cases, ensuring high-quality development.
- Applied version control practices for seamless collaboration and deployment.

Environments: *Java 1.6/1.7, Spring IOC, Spring AOP, Spring Boot, Spring Batch, Hibernate, HTML5, AngularJS, Bootstrap, Servlets, Tag Libraries, RAD, Web Sphere 8.1, Microservices, XML, AJAX, JAXP, JAXB, JAX-WS/RS, XSLT, WSDL, SOAP-Web Services, DB2, IBM Clear Case, FileZilla, SFTP, JUnit, Mockito, JMS, ANT, EMMA.*

Client: **Ibza Software Solutions, Hyderabad, India**
Software Developer

Mar'2015 - April'2017

Responsibilities:

- Participates in functional requirements discussion with product owners, business analysts, & other teams in designing and developing FIM components using Java related technologies.
- Creates/maintains High level architectural document for the various FIM platform components in iteration fashion (agile). Led the team in understanding the design and developing the web application.
- Playing a key role in architecture discussions for new projects/enhancements and provided proven solutions in terms of technologies, integrations, automated testing and the process.
- Designs & Develop FIM Platform components using Core Java, Spring MVC Rest Services, Spring Boot, and Gem fire, Kafka, WebLogic etc.
- Created brand new web applications using Java and Spring related web technologies & created high level APIs before team starts working on various features.
- Created FIM batch jobs using spring XD and developed low latency batch jobs to process large size feeds.
- Developed POC's & production ready jobs to stream the data from various backend systems to IMDG using feeds, various database pull, Apache Spark and Kafka.
- Worked closely with the team in transitioning POC's to full size applications.
- Deployed applications to DEV/UAT Servers daily using Jenkins build and automated deployments.
- Performed Code reviews of other developers as per the standard design and coding standards
- Actively participates in Backlog refining, Sprint Planning, Sprint review sessions and also helps team in refining stories.
- Works with multiple ERP teams to bring the ERP data into in memory data grid through POC's.
- Participated and played major role in daily scrums, backlog refining, spring planning, and spring review meetings.

Environments: Core Java, Spring, Spring Boot, Spring XD, Spring MVC Rest Services, Gemfire/Geode, Kafka, Apache Camel, Apache Spark, Spring Batch, Tomcat, EHCache, HBase, Apache Spark, Hive, Sqoop, Coherence, JAXB, Git, UML, Jenkins, Maven, Hibernate, UNIX, Toad, Web-Services, SQL Server, XML and XSL(XSLT), Log4j, JUNIT, JavaScript, JAX-WS, JAXB etc.

EDUCATION: Bachelor of Science in Computer Science from JNTU, India – May 2014.
