

SUMMARY:

- Overall, 15.5 years of IT experience in the field of ETL, **Data Integration, Data Quality and Data De-identification.**
- Having Technical and Functional expertise in **Data Integration, Data Quality Management and Data Governance.**
- Have led various data integration projects and responsible for building & implementing Data Integration & Data Quality capabilities based on client requirements.
- I have a strong expertise in **Profiling, Cleansing, Standardization, and Address validation**, ensuring data accuracy and integrity across various systems.
- I have successfully designed and optimized ETL processes to ensure efficient data flow and transformation. I am adept at leveraging various data integration tools and platforms to solve complex data challenges and deliver high-quality data solutions.
- I have also worked extensively on address validation, ensuring that data entered systems is accurate and complete using **Address Validation Services**. This involves using a variety of tools and techniques to verify and standardize addresses, which is crucial for maintaining data quality across different applications.
- I have also automated many Informatica processes, reducing manual intervention and increasing overall efficiency. This automation has streamlined data workflows, minimized errors, and ensured timely data processing, which has significantly improved project outcomes and client satisfaction.
- Having comprehensive experience in implementing **Data Quality & Data Integration Framework** in many projects.
- Experienced in migrating from PowerCenter to IDMC using Informatica's Intelligent Migration Factory.
- Have extensive experience in **Cloud Data Integration (CDI) and Cloud Data Quality (CDQ).**
- Good Knowledge in **Snowflake and Google BigQuery.**
- Have designed and implemented multiple re-usable Data Quality components for data cleansing, data validation and data de-identification.
- I have been actively involved in cloud data migration projects, specifically migrating from Oracle to Snowflake using **Informatica Intelligent Cloud Services (IICS).**

EDUCATION

Title of the Degree with Branch	College/University	Year of Passing
BACHELOR'S DEGREE	PGP Engineering College/ Anna University, Namakal, TN	2008
XII	Sri Vidhya Matriculation Higher Secondary School, Uthangarai, TN	2002
X	DDCSM Matriculation School, Palacode, TN	2000

OTHER SOFTWARE COURSES/CERTIFICATION COMPLETED

No	Name of Institution	Diploma or Certificate	Year of Completion
1	IDQ Data Quality Proficiency level III	Cognizant Certified	2021

TECHNICAL SKILLS

Data Integration & Data Governance Tool	Informatica PowerCenter, Informatica Developer (IDQ) 10.5.2 , Axon, EDC, DVO
Reporting Tool	Tableau Desktop 2021.3
Programming Languages	Oracle PL/SQL, SQL, WSDL, Shell Script
Databases & Tools	Google Big Query, MySQL, SQL Server, DB2, Oracle 11g, Amazon Aurora & Cloud SQL – Snowflake
Cloud	IICS (Informatica Intelligent Cloud Services)/IDMC (Intelligent Data Management Cloud)
Data Modelling Tool	Lucid Chart
Code Repository	Bit Bucket

DOMAIN SPECIALIZATION

Domain	Specific Area in Domain	Experience (Months)
Health care	<i>Data Analysis & De-identification</i>	40
BFS & Insurance & Provident Fund	<i>Workflows & Data Migration</i>	12
BFS & Mortgage	<i>QC Metrics & Data Trend Analysis</i>	12
Information Media Entertainment (E-Publishing)	<i>Data Quality & Data Integration</i>	90
Life Sciences	<i>Data Quality & Data Integration / Cloud Migration</i>	12
Insurance	<i>Data Integration / Cloud Migration</i>	0.8

EMPLOYMENT HSTORY:

Name of the Company	Designation	From	To	Duration (Years)
Cognizant Technology Solutions India Private Limited	Manager	05-JAN-2015	Till Date	10.1 Years
DXC Technology (Formerly Known as Computer Science Corporation Pvt Ltd)	Professional1: Programmer Analyst	16-AUG-2011	22-DEC-2014	3.2 Years
Agile Labs Pvt Ltd	Software Engineer	05-MAY-2010	20-AUG-2011	1.3 Years
Core Logic Global Services Pvt Ltd (formerly known as FIC India Private Ltd)	Consultant Trainee	30-JUL-2009	04-MAY-2010	0.9 Years

PROJECT: #1

Project Title	EDW to EDCP Migration
Duration	06/22/2024 – Till Date
Location	Cincinnati, OH
Hardware	Pentium series of desktops, Sun Solaris
Operating Systems	Windows 7, Windows 10, Windows Server, Unix, Linux, Ubuntu
Programming Languages/Tools	IDMC/IICS, SQL Developer, SnowSQL, Unix Shell Scripting.

PROJECT DESCRIPTION:

This project concentrates on the migration of data from Oracle Database to Snowflake cloud. This involve in converting all code base from oracle to snowflake and create all the required data base objects in snowflake. We have EDW (Enterprise Data Warehouse) where most of the Policy related information and FDW (Financial Data Warehouse) where most of financial transactions resides which is used for reporting purposes. which we are migrating to snowflake for improving the data retravel and data processing purposes.

CLIENT DESCRIPTION:

Great American Insurance Group, a leading Commercial Insurance based out of Cincinnati, Ohio is a leader in Commercial, Property and Casualty insurance which has many subsidiaries in United States. Fifth latest provider of multi-peril crop insurance in the US. They are known for their expertise in specialty lines and provides tailored insurance solution for nitche markets. Great American Insurance Group, a division of American Financial Group, reported a revenue of \$4.8 billion in recent financial data. This reflects their strong market presence and diversified portfolio in the insurance industry.

Role: Working as a technical lead and collaborated with business users to understand the needs and define the requirements, including report definition, conversion and data cleansing rules, design changes to screens and reports, created documentation and provides appropriate user documentation.

- Converting all the database object from oracle to snowflake and comparing the data set from, both oracle and snowflake.
- Collaborating to ensure a smooth transition by assessing the Oracle environment, defining migration strategy, extracting data, transforming and loading it into Snowflake using data integration option in IMDC.
- Analyze queries and optimize for Snowflake architecture to leverage its parallel processing capabilities.
- Involved in Informatica IDMC migration and Data Integration using IDMC.
- Have identified issues, action resolutions, and provided technical assistance for complex problems.

- Worked in conjunction with system administrators for migration, deployment and performance tuning of repositories.
- Involved in review and quality check of team members code and preparing the unit test plan, system test plans.
- Effectively communicated with peers, developers, analysts, project managers, quality control, and across other technology team boundaries.
- Lead the efforts to monitor the performance of the technical components and evaluated the solutions to optimize and increase the performance of the components through performance tuning.
- Have evaluated and documented existing data. Gathering and documenting the technical and business meta data about the data as well as providing insight into the data itself.
- Creating Job plans and scheduling in UC4 Scheduler.

PROJECT: #2

Project Title	Customer Master MDM Implementation
Duration	03/16/2023 – 07/21/2024
Location	Princeton, NJ
Hardware	Pentium series of desktops, Sun Solaris
Operating Systems	Windows 7, Windows 10, Windows Server, Unix, Linux, Ubuntu
Programming Languages/Tools	Informatica IDQ, Informatica PowerCenter, Oracle, Microsoft SQL, Oracle PL/SQL, SQL Developer

PROJECT DESCRIPTION:

As part of the MDM implementation, we cleanse and standardize the customer data while integrating the data from NUCLEUS and ONEKEY two legacy systems and feed it to MDM and send the cleansed and standardized data to the downstream systems and by profiling the customer data to identify the anomalies in the data using profile score card using Analyst Tool and remediate these anomalies using reusable component. Creating data quality metrics to assess the quality of the data that is getting stored in the federated systems.

CLIENT DESCRIPTION:

Bristol-Myers Squibb (BMS), a global biopharmaceutical company, is headquartered in Princeton, NJ. The company is primarily engaged in the discovery, development, and commercialization of therapies designed to treat cancer and immune-inflammatory related diseases. The company is involved in research in various scientific areas that might deliver proprietary next-generation therapies, targeting areas, including intracellular signaling pathways, protein homeostasis and epi genetics in cancer and immune cells, immune modulation in cancer and autoimmune diseases and therapeutic application of cell therapies. The company has sales in approximately 70 countries and regions, including Europe, Latin America, the Middle East, the Asia/Pacific, and Canada.

ROLES AND RESPONSIBILITIES:

Role: Working as a technical lead and collaborated with business users to understand the needs and define the requirements, including report definition, conversion and data cleansing rules, design changes to screens and reports, created documentation and provides appropriate user documentation.

- Involved in Solution Build, working on Proof of Concepts, Conference Room Pilots Testing, Production Cutover, Production Go-Live Tasks, and Production Support.
- Involved in performing Gap/Fit Analysis of current process, new process changes Technical and Functional requirements gathering, identifying, planning and designing new process changes with impacts and aligning it with our client's expectations.
- Involved in Data Integration from Snowflake using IDMC (Cloud Data Integration Service) using AWS S3 plugin, migrating the data from S3 location to ETL staging and further to MDM staging Layer.
- Involved in Informatica PowerCenter to IDMC migration and Data Integration using IDMC.
- Have identified issues, action resolutions, and provided technical assistance for complex problems.
- Worked in conjunction with system administrators for migration, deployment and performance tuning of repositories.
- Have evaluated and documented existing data. Gathering and documenting the technical and business meta data about the data as well as providing insight into the data itself.
- Implemented SCD Type 2 Dimension for loading the data into MDM space in our current project
- Having Strong Knowledge in all the ETL transformation specifically worked in standardizer, Parser, Labeller, Match, Consolidation, Decision, Exception, Key Generator etc
- Involved in review and quality check of team members code and preparing the unit test plan, system test plans.
- Effectively communicated with peers, developers, analysts, project managers, quality control, and across other technology team boundaries.
- Lead the efforts to monitor the performance of the technical components and evaluated the solutions to optimize and increase the performance of the components through performance tuning.

PROJECT: #3

Project Title	MDM Customer Data Hub
Duration	09/01/2015 –14/3/2023
Location	Chennai India
Hardware	Pentium series of desktops, Sun Solaris
Operating Systems	Windows 7, Windows 10, Windows Server, Unix, Linux, Ubuntu
Programming Languages/Tools	Informatica IDQ, Informatica PowerCenter, Oracle, Microsoft SQL, Oracle PL/SQL, SQL Developer

PROJECT DESCRIPTION:

Pearson Implemented Customer Data Hub using Oracle MDM to push Global Customer Master data into federated target systems like ONECRM(Salesforce), TEP(Oracle E-Business Suites) during this migration we are implementing Data Quality by using a DQ framework which consist of reusable components to cleanse and validate customer entities like NAME, ADDRESS, CONTACT etc. By profiling the customer data to identify the anomalies in the data using profile score card using Analyst Tool and remediate this anomalies using reusable component as mentioned above, which will enable the process to send the standardized and cleansed data into the federated target systems and retain the invalid data inside the DQ environment as DQ defect or errors this will help us identify the root cause of these data anomalies to fix and re-process them using Data Stewards. Using AXON which is integrated to all the profiles, scorecards and scheduled to refresh based on business requirement. We will identify the data lineage using Informatica EDC. One of most important and comprehensive features in Informatica Data Quality which we have used in many projects is Address Doctor using which we were able to validate and correct addresses globally. We have created a reporting layer using Oracle database and created dashboards using visualization tool TABLEAU to showcase the data quality metrics and Improvements.

CLIENT DESCRIPTION:

Pearson Education is a British Owned education publishing and assessment service to schools and corporations, as well as directly to students. Pearson offers educational and assessment tools, content, products and services to learners at every stage across the lines of business i.e. K12, Schools, ELT, Higher Education Courseware etc.

Pearson's Products and Services are used by millions of users, teachers, and learners.

ROLES AND RESPONSIBILITIES:

Role: Worked as Offshore Technical Lead for Data Integration & Data Quality team, mainly responsible for design and development of solutions for Data Quality measures and Metrics of Pearson's Customer and Product Data Hub and its integrations with all the downstream and legacy systems. Leading the solution designing, planning, development efforts through my expertise in Data Quality and Data Governance with below responsibilities:

- Participating in functional requirements gathering, which involves review of existing systems configurations and operating methodologies as well as understanding evolving business needs in niche Informatica Data Quality and Carry out detailed analysis of new business requirements.
- Heading up the responsibility of evaluating ongoing suggestions and best practices for the DQ solutions analyzing alternatives and conducting solution recommendations related to configurations or technical objects.
- Involved in Solution Build, working on Proof of Concepts, Conference Room Pilots Testing, Production Cutover, Production Go-Live Tasks, and Production Support.
- Provides Technical and Functional Expertise on various Key issues.
- Collaborates with IT development team to assure MDM architectural solutions are suitably translated into effectual and robust implementations.
- Works with stakeholders on critical systems bugs and issues. He is involved in identifying issue trends and monitors and keeps track of issues. Ensures routine runs of production jobs and important data loads run smoothly in the system architecture.

- Having Strong Knowledge in all the ETL transformations like Expression, Joiner, Aggregator standardizer, Parser, Labeler, Router, Address Validator, Match, Consolidation, Decision, Exception, Key Generator etc.
- Leads the efforts to monitor the performance of the technical components and evaluates the solutions to optimize and increase the performance of the components through performance tuning.
- Involved in performance tuning of existing objects to reduce the cycle time to improve the overall user experience.
- Working closely with the Informatica Admin team and architects of other platforms to understand scalability needs and present solutions to key performance issues.
- Involved in creating Functional Specification documents with algorithms and process flow / flow charts for new requirements and prepare design documentation and provide technical solution.
- Co-ordinating and work with offshore technical team and covering the Functional aspects of the applications.
- Working with Informatica for any product related issues and do impact analysis on the provided patches with existing CI Functionalities.
- Used Autosys for creating job plans and Scheduling the jobs.
- Designing Custom Reports for quantitative and statistical analysis.

PROJECT: #4

Project Title	Exelon Application Maintenance and Development Support
Duration	07/01/2015 – 08/30/2015
Location	Chennai India
Hardware	Pentium series of desktops, Sun Solaris
Operating Systems	Windows 7, Windows 10, Windows Server, Unix, Linux, Ubuntu
Programming Languages/Tools	Oracle SQL, Oracle PL/SQL, SQL Developer, Informatica IDQ, PC, Axon, EDC , Tableau Desktop

PROJECT DESCRIPTION:

Exelon has enabled a data integration platform where its data flow gets channelized and as part of integration, we have enabled our IDQ framework to validate and cleanse customer data and to generate DQ metrics which enable the business to have insight on the quality of data that flows across during integration.

CLIENT DESCRIPTION:

Exelon is the company in the electricity industry of the United Kingdom responsible for overseeing the arrangements that enable selling and trading of generated electricity as well as managing the systems and overseeing the parties that facilitate its operation.

ROLES AND RESPONSIBILITIES:

Role: Worked as Informatica Senior Developer and was mainly responsible for design and development of solutions for Data Quality measures:

- To prepare various functional and process flow documents like Details Design, Functional Specifications Documents etc.
- To interpret and analyze the functional requirements and convert into technical design.
- To prepare various reports on data quality prospective which is used by the business
- To work with stakeholders on critical systems bugs and issues. He is involved in identifying issue trends and monitors and keeps track of issues. Ensures routine runs of production jobs and important data loads run smoothly in the system architecture.
- Designing Custom Reports for quantitative and statistical analysis.
- To Profile, Cleanse and Reduce the redundancy of data set using informatica IDQ & Analyst Tools.
- To leads the efforts to monitor the performance of the technical components and evaluates the solutions to optimize and increase the performance of the components through performance tuning
- Involved in performance tuning of existing objects to reduce the cycle time to improve the overall user experience.
- Have worked with Informatica for any product related issues and do impact analysis on the provided patches with existing CI Functionalities.

PROJECT: #5

Project Title	HIPAA Application Security Program (EES-HASP)
Duration	08/20/2011 – 12/15/2014
Location	Chennai India
Hardware	Pentium series of desktops, Sun Solaris
Operating Systems	Windows 7, Windows 10, Windows Server, Unix, Linux, Ubuntu
Programming Languages	Oracle SQL, Oracle PL/SQL, SQL Developer, Informatica IDQ PC, Axon , EDC , Tableau Desktop, Remedy, SVN, Compare Pro

PROJECT DESCRIPTION:

Using our Data De-identification framework we perform data masking, date ageing techniques without changing the format or properties of the data. Our source data comes as flat files from various data sources and same is de-identified and load in any non-prod environment for various purposes like development and testing. By data de-identification the vital information about any patient or members of various healthcare provider is protected and become HIPAA compliant.

The key objectives of the HIPAA Application Security Program (HASP) as follows:

- To de-identify all the Patient or Membership related PHI (Protected Health Information).
- To prevent PHI data from entering into non-production environment by de-identifying them.

CLIENT DESCRIPTION:

Kaiser Permanente is a prominent leader in US healthcare. The not-for-profit entity is among the largest integrated healthcare systems in the US. The company offers health care services through its network physicians belonging to Client's Medical Groups. Our client also operates about three dozen hospitals and more than 400 medical offices that form the Client's Foundation Hospitals. Additionally, the Client's Foundation Health Plan covers millions of people with a range of health plans, most of which are in California. The company operates nationwide, though its business operations are largely concentrated along the West Coast.

ROLES AND RESPONSIBILITIES:

Role: Worked as Senior Developer and was mainly responsible for design and development of solutions for Data De-identification Process. To protect PHI details in compliance with HIPAA regulation.

- Planning and Designing of Oracle Database objects (tables, relations, indexes, triggers, sequences, stored procedures, etc.) as per the requirement of the Application.
- Involved in construction part of the Applications and coded SQL and PL/SQL scripts as per the client requirement.
- Involved in coding of data extraction scripts and generating reports as per technical specifications.
- Involved in Performance tuning which includes creating indexes, Gathering Statistics through analysis of tables and indexes, Gathering Explain plan and using Hints.
- Performed Unit testing, Regression testing and System testing for the codes modified.
- Bug fixing under Request for Information Services and implementing in production. Maintenance and Support works to the client at 24X7 basis.
- Preparing Design document, test case document and Review document.
- XML Development using FILEAID Designed and Developed UNIT-TEST tool to run the de-identification and compare the actual data and the de-identified data and then prepare the comparison document.

PROJECT: #6

Project Title	State Insurance And Provident Fund Portal
Duration	05/20/2010 – 08/5/2011
Location	Bangaluru India
Hardware	Pentium series of desktops
Operating Systems	UNIX, Windows 2003/2008 server, Linux, Ubuntu
Programming Languages	Oracle SQL, Oracle PL/SQL, SQL Developer, Informatica PC 8.1.1, Star Team, RTC, SharePoint

Project Description:

This project deals with extracting data from the portal which provides up to date information for over 7.1 laces government employees of Rajasthan State who belongs to different department under the state government, which acts as a medium ,where in end to end functional operations were carried out by government personnel of the state of Rajasthan and of the department of SI & PF to store, process and retrieve all the state's insurance and provident fund related data, which is very much made reliable using oracle database through which all the functional and workflow related tasks were carried on. This acts as an easy means on deducing monthly premiums, loan interest on PF,SI,NPS,& CPF etc., thus providing absolute information about current and overall premium amounts at hand and in due using various reports based on the extracted and transformed data. Thus acts as a very successful and easiest source of information to all its users and stack holders.

CLIENT DESCRIPTION:

The state insurance and provident fund department was established in Rajasthan as a welfare measure with a view to provide economic & social security to all the employees of the Government of Rajasthan. Approximately 7.01 lakh SI Policy Holders and 3.58 lakh GPF account holders are being benefited under these schemes.

ROLES AND RESPONSIBILITIES:

Role: Worked as Developer and was mainly responsible for development activities pertaining SIPF portal's data integration and DBMS activities.

- Designing the informatica mappings, workflows, Sessions.
- Writing PL/SQL stored procedures
- Involved in SQL and PL/SQL query tuning and DB level tuning.
- Track & resolved the incidents/tickets through a tool called Remedy.
- Interacting with the clients on daily basis about building the requirements and clarifications Interworking process.
- Worked with parameter files to dynamically pass the parameters to sessions and executing and monitoring the workflows.
- Writing the SQL queries to validate and troubleshoot the mappings.
- Writing the unit test cases and executing them against the informatica mappings.

PROJECT: #7

Project Title	Data Mart - QC Portal For BPO Operations
Duration	08/01/2009 – 04/30/2010
Location	Bangaluru India
Hardware	Pentium series of desktops
Operating Systems	UNIX, Windows 2003/2008 server, Linux
Programming Languages	Oracle SQL, Oracle PL/SQL, SQL Developer, Informatica PowerCenter 8.1.1, Star Team, RTC, SharePoint

Project Description:

This project deals with extracting data from the QC portal across all verticals and the Projects involve moving data from mainframe system to Distribution system. Some data validation and cleansing logic will be applied over the data and from this data customized reports will be generated for third party clients as well as customized flat files will be generated using ETL processes to have clarity and integrity of data.

CLIENT DESCRIPTION:

CoreLogic, Inc. provides consumer, financial and property information, analytics and services. The Company combines public, contributory, and proprietary data to develop predictive decision analytics, as well as offers mortgage and automotive credit reporting, property tax, valuation, flood determination, and geospatial analytics and services.

ROLES AND RESPONSIBILITIES:

- Designing the informatica mappings, workflows, Sessions.
- Technical document for end-to-end process.
- Scheduling the Informatica PowerCenter workflows.
- Worked with parameter files to dynamically pass the parameters to sessions.
- Executing and monitoring the workflows.
- Writing the SQL queries to validate and troubleshoot the mappings.
