SUMMARY

Dynamic **Business Analyst/Scrum Master** with **7+ years** of experience driving digital transformation and process optimization across Banking, Healthcare, and Retail sectors. Adept at Agile/Scrum and Waterfall methodologies, with a proven track record of leading cross-functional teams to deliver complex projects, including system integrations (e.g., Medicare program mergers), EHR implementations, and regulatory compliance initiatives. Skilled in requirements elicitation, gap analysis, and data-driven decision-making using SQL, Tableau, and FHIR/HL7 standards. Certified in Business Analysis (Purdue University) and Agile practices, with expertise in Jira, UML, and stakeholder collaboration to align technical solutions with business goals. Recognized for streamlining workflows, mitigating risks, and enhancing operational efficiency at organizations like **Molina Healthcare, GE Healthcare, and Canadian Western Bank**.

TECHNICAL SKILLS

Methodologies:	Agile/Scrum, Waterfall, SDLC
Documentation:	FRD, BRD, SRS
Project Management Tools:	MS Project, MS Excel, MS SharePoint
Analysis Skills:	Cost/benefit analysis, Impact analysis, GAP analysis, Risk analysis, SWOT analysis
Tracking / Other Skills:	Jira, Microsoft Visio, Rational Rose, HP Quality Centre, JAD, RTM, SQL
Visualization Tools:	Tableau, Microsoft Excel
Database:	MySQL, SQL Server, SQLite
Soft Skills:	Time Management, Leadership and Management, Problem-solving, Negotiation, Decision-Making, Documentation and Presentation, Verbal Communication
Operating System:	Windows, Mac

EDUCATION & CERTIFICATIONS

Bachelors In Business Studies

De Montfort University, Leicester, United Kingdom

- **Professional Certificate Program in Business Analysis, Purdue University, USA**
- **PG BA - IIBA/CBAP Trained Certification, Simplilearn**
- **Business Analytics with Excel Certification, Simplilearn**
- **PGP BA - Tableau Training Certification, Simplilearn**
- **PG BA - Data Analysis and Visualization with Python, Simplilearn**

WORK EXPERIENCE

Molina Healthcare, Hartford, Connecticut

Jan 2024 – Current

Business Analyst / Scrum Master

Molina Healthcare is a leading provider of managed care services, offering health plans for individuals and families covered by government programs like Medicaid, Medicare and Marketplace. The company focuses on improving access to quality healthcare for underserved populations.

Project:

In this project, Molina Healthcare successfully acquired Bright Health's Medicare program, and the primary objective was to seamlessly integrate Bright Health's Medicare plans into Molina's existing infrastructure. The integration spanned multiple critical modules, including **Sales & Broker**, **Payment Integrity**, **Pharmacy**, and **Quality**, to ensure a smooth transition for both members and internal operations.

Key Responsibilities:

- **Sales & Broker Integration:** The project involved aligning Bright Health's sales channels and broker management systems with Molina's, ensuring a unified approach to member enrollment, plan offerings, and sales commission structures.
- **Payment Integrity:** The integration aimed to standardize payment processes, enhance claim accuracy, and prevent fraud across both organizations, ensuring compliance with Medicare regulations and optimizing payment workflows.
- **Pharmacy:** A key focus was merging pharmacy benefit management systems, formularies, and member services, providing uninterrupted access to medications while optimizing cost control and therapeutic outcomes.
- **Quality:** The project also involved aligning quality measures, data reporting standards, and member health initiatives to meet CMS (Centers for Medicare & Medicaid Services) requirements, improving overall health outcomes and member satisfaction.

- Coordinated the migration of historical data to archive locations and downstream systems, ensuring seamless integration, data accuracy, and minimal disruption to business operations.
- Collaborated with cross-functional teams to define migration requirements, establish data mapping, and develop validation rules for data integrity during the migration process.
- Managed regression testing for migrated data, including testing of reports in EIM and Quality Cozeva, ensuring all legacy data was accurately transferred and available for downstream analytics and reporting.
- Documented business requirements and data specifications for each workstream, ensuring alignment with business objectives and compliance standards, and facilitating smooth communication between business stakeholders and technical teams.
- Played a key role in data cleansing and validation, identifying and resolving data discrepancies, improving data quality, and reducing the risk of errors post-migration.
- Participated in System Testing and UAT followed by production verification, post production testing and support.
- Provided regular updates and reporting to senior leadership on project status, key milestones, and potential risks, contributing to the successful on-time completion of the data migration project.
- Managed the Requirement Traceability Matrix to ensure completeness and track requirements using SQL.
- Created Epics, Features and User Stories in JIRA and managed the Sprint backlog.

Environment: Agile Scrum, UML, SQL Server, JIRA, MS Excel, Tableau, Lucidchart, Confluence

GE Healthcare, San Ramon, CA
Business Analyst / Scrum Master

Jan 2022 – Nov 2023

GE Healthcare is a leading global medical technology company and a manufacturer and distributor of diagnostic imaging agents. It develops health technology for medical imaging and information technologies, medical diagnostics, and patient monitoring systems.

Project:

The goal of the project is the implementation of Clinical Applications like functional MRI and Cartilage and an Electronic Health Record (EHR) system for the MRI imaging modality which generates the complete electronic record of clinical patient encounter. It also includes development and enhancements to other care-related activities directly or indirectly interfacing with patient, physician, laboratory, billing and health education portals.

Key Responsibilities:

- Primarily responsible for requirement gathering, gap assessment, business user training for clinical modules of Hospital Management Information System.
- Analyzed use-case document and functional requirement specification document for the clinical applications mainly functional MRI and Cartilage.
- Played a critical role in the implementation of Clinical Applications while gaining essential expertise related to FHIR API and healthcare standards.
- Demonstrated proficiency in FHIR API and resources, including developing source-to-target maps. I was responsible for mapping data between HL7 v2 and FHIR, ensuring seamless interoperability.
- Conducted functional testing of FHIR outputs to validate their compliance with industry standards and to identify and address any discrepancies.
- Strong understanding of healthcare standards, including HL7 V2 messages, HL7 CCD, HL7 FHIR, and IHE ITI transactions. I effectively utilized this knowledge to ensure data exchange compatibility across various healthcare systems.
- Deep understanding of clinical data in both proprietary and industry-standard formats. I actively sought out methods to improve data conformance and quality, ensuring data accuracy and consistency.
- Well-versed in data formats and various healthcare standards, including HL7, FHIR ensuring compliance with industry best practices.
- Managed the Requirement Traceability Matrix to ensure completeness and track requirements using Advanced SQL.
- Created Epics, Features and User Stories in JIRA and managed the Sprint backlog.
- Utilized Advanced SQL skills to perform data mapping, data validation, and data verification for clinical modules of the Hospital Management Information System.
- Generated various Reports for PMO including Weekly Status Report and Open Defect Report using Excel.
- Participated in System Testing and UAT followed by production verification, post production testing and support.
- Managed project releases with precision, coordinating cross-functional teams to deliver software updates in alignment with business goals and user requirements.

Environment: Agile Scrum, UML, SQL Server, JIRA, MS Excel, Tableau, Lucidchart, Confluence

Canadian Tire Fulfillment Center, Calgary, Alberta, Canada
Business Analyst / Scrum Master

Sep 2019 – Dec 2021

Canadian Tire Corporation is one of Canada's most admired and trusted companies with more than 90 owned brands, 1700 retail locations, financial services, exemplary e-commerce capabilities, and exciting market-leading merchandising strategies.

Project:

The goal of the project was to identify and document the different types of behavioral and system defects introduced in the outbound pack process and propose solutions to fix the defects.

Key Responsibilities:

- Functioned as primary liaison between the business line operations and the technical teams through the project cycle.
- Published daily/weekly volume projections, ran daily trackers & metrics to provide volume visibility to senior management on key supply chain performance metrics.
- Performed deep dive analysis by benchmarking with other fulfillment centers, to understand and resolve root cause of operational performance issues.
- Developed charts and graphs to record the peak periods during any given period, which helped in identifying the highest productivity, no. of defects found and fixed, best performers and other metrics.
- Performed business impact analysis of proposed projects processes and GAP analysis for new functionality requirements, as well as prioritizing them based on actual business.
- Used the guidelines and artifacts of Agile methodology to strategize the Implementation in different iterations and phases of the Software Development Life Cycle (SDLC).
- Authored Business requirements document and System Specifications encompassing Functional and Non-functional requirements.
- Created Epics, Features and User Stories in JIRA and managed the Sprint backlog.
- Involved in JAD sessions for resolving issues involving user interface and downstream systems interactions.
- Reviewed and assisted the design team in coming up with UI Screen Mockups and Wireframes for the proposed new UI prototype
- Involved in managing the defect life cycle - conducting daily defect tracking meetings, reporting and reviewing the defects, assigning the open defects to developers, and re-testing the fixed defects.
- Facilitated the complete UAT process – creating UAT schedules, testing guidelines, managing feedback, follow-up, and resolving open issues.
- Worked on Advanced SQL queries for data retrieval, data validation, and data analysis.
- Assisted in development of User Training materials for the upgraded version of the existing system technology and process improvements.

Environment: Agile Scrum, JIRA, SQL Server, JIRA, MS Excel, Tableau, MS Power Point, MS Visio

Canadian Western Bank, Edmonton, Alberta, Canada
Business Analyst / Scrum Master

July 2017 – Aug 2019

Canadian Western Bank is one of Canada's leading financial services organizations providing specialized service in banking, trust and wealth management.

Project:

The goal of the project was to implement a number of bank wide initiatives to upgrade and improve wealth management software, IT regulatory reporting, process mapping, implementing business rules for newly enacted law and complex regulatory requirements.

Key Responsibilities:

- Increased performance rates by 200% on annual language assessments. Ranked among Top 3 schools in the district.
- Performed extensive Gap analysis of the Wealth Management application to document existing business process flows and derive requirements for the proposed functionalities.
- Worked in an agile environment comprising Business Users, Customers and Subject Matter Experts (SMEs) to analyze existing agent management systems.
- Conducted and led the JAD session with the end users and team members to set up the project goals and objectives, issues resolution, and system design for effective software development.
- Created Epics, Features and User Stories in JIRA and managed the Sprint backlog.
- Worked with Financial Advisors and Client Service Managers (CSMs) handling Managed Accounts.
- Conducted requirement walkthroughs with the development and test teams before the development and testing phases respectively, to ensure that the requirements are accurately understood.
- Reviewing and updating KYC files with missing and updated information to satisfy compliance requirements.
- Performed additional tasks as assigned, improving the effective administration of the AML and KYC Policies.
- Prepared Requirements Traceability Matrix (RTM) between BRDs, FRDs and UCDs and reviewed RTM's from the testing team to make sure test cases covered all the requirements.
- Performed Impact Analysis when request for change (RFC) arrived by looking at Requirement Traceability Matrix (RTM). Escalated the results of the analysis to the Change Control Board (CCB).
- Actively participated in Post production Validation (PPV) and production support calls.

Environment: Agile Scrum, JIRA, SQL Server, JIRA, MS Excel, MS Power Point, Tableau, MS Visio.
