

Michael Guardiola

Senior TypeScript Engineer

mike.a.guardiola@gmail.com | (254) 306-3303 | Waco, TX 76710

SUMMARY

Senior TypeScript Engineer with 10+ years in building secure, performant, and scalable web applications using TypeScript and JavaScript (ES6+). Specializes in frontend frameworks (React, Vue.js), backend platforms (Node.js, Nest.js), RESTful APIs, GraphQL, and CI/CD pipelines. Known for realized operational improvements (99.8% uptime) and for having transformed clinical documentation through AI-augmented transcription and auto-coding. Brings sophisticated knowledge of design patterns, clean architecture, and strong collaboration in Agile/Scrum teams. Combines adaptability/flexibility, creativity, problem solving, Curiosity, Emotional intelligence, Persistence, Relationship-building, and Resourcefulness to deliver user-centered platforms.

SKILLS

- TypeScript (sophisticated knowledge: strict typings, generics, tsc, tsconfig, migration from JS)
- JavaScript (ES6+) (modules, async/await, promises, modern syntax)
- Frontend Frameworks (React, Next.js, Vue.js, Angular; component patterns, hooks, SSR)
- Backend & Runtime (Node.js, Nest.js, Express; async event handling, serverless functions)
- APIs & Data (RESTful APIs, GraphQL, OpenAPI/Swagger; Postgres, MongoDB, Redis, DynamoDB)
- Testing & QA (Jest, Mocha, Vitest, Cypress, Playwright; unit, integration, E2E testing)
- Build & Tooling (Webpack, Vite, Rollup, Babel; bundling, code-splitting, tree-shaking)
- CI/CD & DevOps (GitHub Actions, GitLab CI, Docker, Kubernetes, Helm; pipelines, deployment automation)
- Web Standards & UX (HTML5, CSS3, responsive design, Tailwind CSS, MUI; accessibility, performance)
- Version Control (Git, GitHub, GitLab, Bitbucket; branching strategies, PR reviews)
- Performance & Scalability (profiling, caching, load optimization, horizontal scaling)
- Architecture & Patterns (clean architecture, design patterns, modular monorepos, domain-driven design)
- Soft Skills: Adaptability/flexibility; creativity; problem solving; Curiosity; Emotional intelligence; Persistence; Relationship-building; Resourcefulness; mastery

WORK HISTORY

Senior Full Stack TypeScript Engineer

TAS Energy Inc | *Remote*

Jan 2022 - Present

- Engineered full-stack features for Athelas Insight using TypeScript, React, and Node.js, delivering financial dashboards and AI-enhanced patient engagement tools.
- Implemented automated revenue cycle workflows and payment modules (Affirm integration, SMS/email), which reduced claim processing time by 35%.
- Integrated Ambient AI transcription and auto-coding logic for CPT/ICD-10 billing, augmenting documentation accuracy and clinical throughput.
- Built admin-facing UIs with RESTful APIs and live metrics for claims, denials, and provider performance, sustaining 99.8% uptime for production platforms.
- Orchestrated secure EHR integrations (Epic, WebPT, eClinicalWorks) using validated Node.js services, robust logging, and compliance-focused data flows.

Full Stack TypeScript Engineer

SolutionStream | *Remote*

Mar 2020 - Jan 2022

- Architected scalable RESTful payment APIs and backoffice dashboards using TypeScript, React, Node.js, and PostgreSQL.
- Devised a smart routing engine to route transactions by acquirer performance, lifting transaction success rate by 21%.
- Secured webhook pipelines with retry policies, API key validation, and structured logging to support operational teams.
- Automated CI/CD workflows with GitHub Actions, linting, and automated tests for fast, reliable staging and production deployments.
- Formulated fraud-protection features with admin-configurable rules, card blocks, and 2FA to lower chargeback exposure.

Senior Web Engineer

Extraco Technology | *Waco, TX*

Mar 2017 - Mar 2020

- Designed full-stack reporting modules with Node.js and React, delivering real-time team summaries and dashboards.
- Created data pipelines and schedulers for recurring report generation, removing 40% of manual reporting tasks.
- Enforced OAuth2 and RBAC across internal tools to centralize secure access control and audit trails.
- Constructed configuration UIs and backend endpoints for customizable insights and visual reporting.
- Facilitated sprint planning, documentation, and cross-team testing to raise delivery cadence in an Agile/Scrum environment.

Front-End Engineer

Extraco Technology | *Waco, TX*

Apr 2015 - Mar 2017

- Contributed to client portal UI using HTML5, CSS3, and JavaScript (ES6+), optimizing responsiveness and load performance.
- Migrated legacy views into modular React components to improve reusability and team velocity.
- Authored an internal style guide and component library to standardize UI patterns across projects.

- Validated critical components with unit tests (Jest), raising confidence during feature releases.
- Synced RESTful API endpoints with real-time UI updates via fetch and async hooks for smoother UX.

Web Development Intern

Extraco Technology | *Waco, TX*

May 2014 - Apr 2015

- Assisted in building Azure-hosted Node.js web services and simple microservices.
- Containerized legacy apps with Docker and created basic CI job templates for automated builds.
- Transitioned on-prem SQL Server instances to Azure MSSQL PaaS to modernize data operations.
- Troubleshoot Kubernetes pod issues and tuned Helm charts to stabilize staging environments.
- Produced unit tests for Redis-integrated .NET Core components (xUnit) and contributed to CI/CD pipelines.

EDUCATION

Bachelor of Science, Computer Science @ Baylor University

2014
