

MOHITH SAI NATTAM

Seattle, Washington, 98101

☎ +1 716-705-2300 ✉ mohithn61@gmail.com

Education

University at Buffalo, The State University of New York

January 2023 – May 2024

Master of Science, Engineering Science Data Science

Buffalo, New York

SRM University, Kattankulathur, Chennai

August 2013 – May 2017

Bachelor of Technology, Electrical and Electronics Engineering

Chennai, India

Technical Skills

Languages: Java, Python, C++, C#, JavaScript, jQuery, HTML, CSS, SQL.

Technologies/Frameworks: Visual Studio, Spring Boot, Spring Core, JavaScript, React JS, Node JS, RESTful APIs, AOP, Apache Kafka, Cassandra, Microservices, ClickHouse, Mockito, Hibernate, MySQL, Git, JUnit, Maven.

Machine Learning Frameworks: LLMs, CNNs, RNNs, ScikitLearn, PyTorch, TensorFlow.

Others: Amazon AWS, GCP, Postman, Object-Oriented Programming, Agile (Scrum/Kanban), Debugging.

Work Experience

Software Engineer — HCL Tech

January 2024 – Present

Remote, USA

- Led the development and architectural design of Information Management Solutions using Microsoft SharePoint and Java, focusing on productivity, governance, and digital transformation for global clients.
- Designed and implemented scalable, robust architectures, applying best practices in design patterns, system reliability, and scalability, which improved performance and reliability in production environments.
- Spearheaded the integration of Java-based backend systems with cloud services (AWS), **enhancing content processing workflows by 20%** and improving overall system efficiency.
- Conducted comprehensive testing and optimization of new features, significantly boosting user engagement and **customer satisfaction by 10%**.

Software Engineer — Tata Consultancy Services

January 2020 – December 2022

Hyderabad, India

- Designed large-scale applications in microservice architecture and implemented them strictly following the **SOLID design principles and design patterns**.
- Implemented caching algorithm to store frequent requests on the server, **which reduced 20% load on the database**. Used LRU technique as the cache eviction strategy.
- Re-designed data schema and mapping of entity keys from 1-1 to 1-Many mappings, which decreased data **redundancy by 30%**.
- Optimized database response times by adding non-clustered indexes and performed SQL tuning, which improved the **response time by 15%**.
- Re-factored legacy web pages and migrated to single-page apps, which decreased the **page response time by 35%**.
- Enhanced dynamic UI modules to enable users to customize the UX design as per their requirements.

Associate Software Engineer — Tata Consultancy Services

June 2017 – December 2019

Hyderabad, India

- Integrated an additional payment processor by redesigning the existing structure, making it easily extensible and scalable by following the design patterns.
- Developed Pricing Algorithms, Third-party Storefront tools, and Dashboards for the Microsoft proprietary PowerBI platform, a web-based multi-tenant environment in the cloud.
- Developed an application which reconciles all the orders placed through the Microsoft application.
- Implemented a Nifi pipeline which processes all the shipped orders into the SQL cluster.
- Resolved user-reported issues and existing bugs in the system for quality control.

Projects

Bank Website | Node.js, Express.js, JavaScript, MongoDB, HTML, CSS

- Designed a web application which gives end-to-end bank services to users.
- Implemented using MVC framework for separations of concerns for easy extensibility and re-usability of code.
- Implemented promise for synchronization and handling a synchronous database request.

Amazon Fine Food Reviews | AWS, Machine Learning, Sentiment Analysis

- Conducted sentiment analysis on Amazon fine food reviews utilizing various machine learning algorithms including linear regression, logistic regression, SVM, Kd-Tree, and Naive Bayes.
- Deployed the project using AWS Pipelines and analyzed time-based split to evaluate review sentiments effectively.
