

Kalem Zane

Senior iOS Developer

📞 (224) 335-9762 @ kalemthreads@gmail.com 📍 Illinois, United States ⭐ 7+ years of experience

SUMMARY

Skilled in building and maintaining iOS apps using Swift, SwiftUI, and key Apple frameworks. Delivered stable, scalable apps by following HIG, using MVVM, integrating third-party SDKs, writing unit tests with XCTest, and collaborating across cross-functional teams.

EXPERIENCE

Senior iOS Developer

Sparkle Technologies

📅 11/2022 - Present

- Architected complex UIKit and SwiftUI interfaces supporting dynamic layouts and adaptive design across all device classes.
- Optimized Combine pipelines and asynchronous flows to reduce UI latency and improve real-time responsiveness.
- Engineered scalable modular features using MVVM-C and dependency injection via Resolver, enhancing codebase reusability by 40%.
- Instrumented runtime monitoring tools and proactive crash logging, resulting in a 94% crash-free session rate over 12 months.
- Enhanced CI/CD pipelines using Bitrise with parallel testing and environment-based Fastlane lanes, reducing QA turnaround by 55%.
- Audited legacy components and led transition to pure Swift modules, cutting build time by 28% and modernizing core infrastructure.

iOS Developer

Motus

📅 03/2020 - 10/2022

- Delivered native iOS apps leveraging Core Data, URL Session, and Scene Kit, reaching 1M+ installs with 4.7+ user ratings.
- Accelerated initial rendering performance by 48% through lazy loading strategies and Core Animation optimizations.
- Implemented StoreKit 2-based purchase flows with sandbox testing and receipt validation, increasing subscription conversion by 22%.
- Refactored navigation using Coordinators and deep-linking with custom URL schemes and Universal Links, streamlining UX.
- Leveraged Firebase Analytics and Remote Config for A/B testing and event tracking, improving feature validation accuracy by 60%.
- Created custom Swift Package Manager modules to encapsulate shared logic and reduce code duplication across targets.

Mobile Developer

Credo

📅 06/2018 - 02/2020

- Developed native Swift apps with Auto Layout, Core Location, and Notification Center integrations, retaining 80% of users over 90 days.
- Reduced network bandwidth usage by 35% by integrating NS Cache, background fetch, and efficient RESTful API consumption.
- Crafted reusable components and animations using UI View Property Animator and Interface Builder live rendering.
- Documented code using Jazzy and improved code safety with compiler flags, resulting in a 30% reduction in runtime issues.
- Executed XCTest and XCUITest pipelines for automated regression suites, reaching and maintaining 85% test coverage.
- Added support for push notifications, Siri Kit intents, and offline mode using local Core Data caching and Reachability checks.

SKILLS

Languages & Frameworks

Swift, Objective-C, SwiftUI, UIKit, Combine, RxSwift, Core Data, Realm, SQLite, CloudKit, StoreKit 2, Core ML, ML Kit, Map Kit, AVFoundation

Architecture & Patterns

MVVM, MVP, MVC, Clean Architecture, Coordinator

Tools & Platforms

Xcode, TestFlight, Swift Package Manager, CocoaPods, Fastlane, GitHub Actions, Bitrise, Firebase, AWS, Postman, Charles Proxy

Testing & Debugging

XCTest, XCUITest, Snapshot Testing, Crashlytics, Sentry, Performance & Memory Profiling

APIs & Integration

RESTful APIs, GraphQL, WebSockets, Apple Pay, Payment Gateways, Firebase (Auth, Firestore, Analytics)

Collaboration & Version Control

Git, GitHub, GitLab, Bitbucket, Jira, Trello, ClickUp, Agile/Scrum

UI/UX & Design

Auto Layout, Dynamic Type, Accessibility, Dark Mode, Figma, Lottie, Custom Animations

PROJECTS

ShopNGo

A retail shopping app built for the Middle Eastern market that lets users browse products, scan barcodes in-store, and complete purchases using Apple Pay. Supports real-time inventory updates, offline access, and a frictionless checkout experience.

FuelMate

A smart fueling app that allows users to locate stations, activate fuel pumps remotely, and pay digitally. Features include scan-to-pay, loyalty point integration, and fast transaction flows to reduce wait times at petrol stations.
