253-993-8273

San Diego, CA, 92120

Experienced in Android development (Kotlin, Java), web development (PHP, JavaScript), and database management (SQL, PostgreSQL). Proficient in test automation using Selenium WebDriver, Android app development, and building scalable backend systems. Demonstrated success in optimizing database queries, implementing efficient testing strategies, and delivering high-performance solutions. Collaborative and self-driven professional dedicated to continuous improvement in development processes.

Work Experience

Software QA Engineer

Oct 2021 - Present

Di-GiTech | Mountain View

- Developing BDD test automation scenarios using Java, Cucumber and WebDriver.
- Decreasing the time needed for build by 60% through automation, enabling faster feedback loops.
- Reduced false positives in test results by 35% by optimizing existing test automation code and logic.

Android Developer

Oct 2018 - Sep 2021

Vadmax | Odessa

- Designed engaging UI using Jetpack Compose, ensuring smooth and immersive user experiences
- Implemented Room Database for efficient offline storage, along with Firebase Cloud Messaging (FCM), Crashlytics, and Analytics for real-time monitoring and notifications.
- Integrated OAuth authentication and Google Play Billing for secure login and seamless in-app payments.
- Developed and integrated RESTful APIs, enabling efficient communication between mobile and backend services.

Backend Developer

Oct 2017 - Sep 2021

Vadmax | Odessa

- Developed robust e-commerce backends, ensuring seamless shopping and reducing query load time by 70%.
- Built and optimized RESTful API servers, ensuring high availability and improving data exchange speed by 40%.
- Led a team of developers, increasing team productivity by 20% through mentoring and effective collaboration
