

Nicholas Grant

Automation Engineer
MES | Controls

PROFESSIONAL SUMMARY

Skilled Engineer with a specialization in automation and business analytics in manufacturing environments. Over 5 years of experience between the Pharmaceutical and Medical Device industries. Versed in Change Control Management, Lean Manufacturing, Control Systems, and PowerBI. Possesses a B.S.E. in Biomedical Engineering from Arizona State University. Seeking to leverage my prior experiences in a new engineering role.

SKILLS

Syncade • DeltaV • OSI PI • SQL • PowerBI • VBA • C# • Solidworks • Microsoft Office • Lean Manufacturing • Project Management • Change Controls • Process Validation • Process Improvement • Troubleshooting • CAPAs • Tech Transfer

EDUCATION

BS, Biomedical Engineering,
Arizona State University
Aug 2015 - May 2019

CERTIFICATIONS

Lean Six Sigma Yellow Belt
LBMS - 2025

EMPLOYMENT HISTORY

Manufacturing Execution System (MES) Engineer

Lonza Biologics | February 2024 - November 2025

- ❖ Designed and implemented complex automation functionality within Syncade (Recipe Authoring) through a formal change control process, ensuring compliance with internal quality systems and meeting both internal manufacturing and external customer requirements.
- ❖ Served as Customer Lead for multiple Tech Transfers, creating customer-specific electronic Batch Record (eBR) recipes in Syncade and managing batch record reviews and approvals to ensure alignment with project timelines, cross-functional team inputs, and customer requirements.
- ❖ Developed an Automated Version History application using C#, significantly reducing transcription errors and manual effort in document generation.

Controls Engineer

Lonza Biologics | November 2020 - February 2024

- ❖ Led a team of controls engineers on the Parameter Reduction Project, simplifying tech transfer by creating predefined formulas and automation groupings to streamline bills of parameters, resulting in significant lean efficiency gains.
- ❖ Managed multiple Change Control projects, designing and implementing new automation functionality to meet evolving customer and site-specific requirements.
- ❖ Served as the Primary Controls SME for upstream and downstream tech transfer processes, ensuring accurate configuration of process flow paths and parameter mappings.
- ❖ Developed and maintained PowerBI dashboards for visualizing equipment alarms and production holds, enabling data-driven decision-making and improving takt time within the facility.
- ❖ Provided frontline support to manufacturing teams by rapidly troubleshooting and resolving DeltaV automation issues during active pharmaceutical processing.

Manufacturing Engineer

West Pharmaceutical Services | May 2018 - November 2020

- ❖ Developed automated reporting systems using VBA and database tools, reducing reporting time across multiple levels of the organization and generating annual savings of over \$150K.
- ❖ Wrote and executed IQ/OQ/PQ validation protocols for new manufacturing equipment, including injection molds, industrial automation, and auxiliary systems, ensuring compliance with quality and regulatory standards.
- ❖ Utilized 3D printing to rapidly prototype custom gauge jigs, streamlining injection mold setup processes and improving consistency and accuracy in tool alignment.
- ❖ Applied FMEA methodology and PDCA cycles to identify potential failure modes and implement process improvements, enhancing equipment reliability and reducing downtime.
