EDUCATION

Jawaharlal Nehru Technological University Kakinada

Bachelor's, Computer Science

June 2009 - May 2013

GPA: 8

PROFESSIONAL EXPERIENCE

American Express

Senior .NET Developer with React Js

Remote

May 2023 - Present

- At American Express, I designed, developed, and deployed web-based applications using ASP.NET, C#, and MVC to enhance the company's financial services platform
- I built and integrated RESTful APIs that facilitated seamless communication between internal and external systems, ensuring smooth data exchange for payment processing and fraud detection
- Utilizing SQL Server, I optimized queries, stored procedures, and maintained data integrity for transaction processing and reporting
- I automated deployment processes using Azure DevOps, streamlining CI/CD pipelines to reduce downtime during updates
- Additionally, I developed responsive UI components using React.js, Angular 11, and JavaScript, ensuring an intuitive user experience
- My expertise in database management led me to design and optimize MS SQL Server databases, implementing efficient indexing strategies for high-performance data retrieval
- Throughout my role, I debugged and optimized enterprise applications using Microsoft Visual Studio while managing source code and build automation via TFS and GitHub
- I worked on Medicaid-based applications, ensuring compliance with healthcare industry regulations and integrating state-level systems
- My responsibilities also included developing RESTful APIs, designing scalable subsystems, and recommending optimal server configurations to enhance system performance.

Chevron

Senior .Net Developer with React

Houston, TX, USA

July 2021 - April 2023

- At Chevron, I played a crucial role in developing web applications using React.js, .NET Core, EF Core, and Web API, focusing on microservices architecture and Azure Functions for scalable API integrations
- I managed SQL Server configurations using EF Core's Model First Approach, ensuring efficient database interactions
- My work involved state management using Redux and developing AXIOS interceptors to secure API communication
- I designed GraphQL APIs for streamlined onboarding data retrieval, reducing API complexity for business units
- Implementing role-based authentication using OAuth2 and JWT, I enhanced system security while deploying microservices using Docker and Kubernetes for high availability
- I also automated CI/CD pipelines with GitLab CI/CD, Jenkins, and Azure DevOps, ensuring smooth development workflows
- Additionally, I optimized MongoDB data models and used ES6 for component-driven development
- My responsibilities included performing complex SQL operations, designing efficient NoSQL data models, and implementing cutting-edge cloud solutions to support Chevron's business processes.

Bank of America

Senior Full Stack .NET Developer with Angular 6

Remote

October 2019 - July 2021

- At Bank of America, I was responsible for developing single-page applications using Angular 6 and Web APIs to support the bank's financial operations
- I built and integrated RESTful APIs, enabling seamless data flow across applications
- My role involved working with SQL Server and Oracle, creating complex stored procedures for handling large-scale banking transactions
- I implemented authentication mechanisms using OAuth2, JWT, and Active Directory (SSO), ensuring secure user access
- I automated build and deployment processes using Jenkins and Ansible Tower, significantly improving development efficiency
- I led efforts to migrate legacy services to .NET Core, improving application scalability and performance
- Additionally, I played a key role in configuring role-based security models, optimizing CI/CD pipelines using TFS, and developing reusable frameworks for the organization

- My contributions helped streamline data management and enhance the overall efficiency of Bank of America's digital banking solutions.

Kohl's

Menomonee Falls, WI, USA

Sr .NET Windows Mobile Application Developer

May 2017 - September 2019

- During my tenure at Kohl's Innovation Centre, I developed Windows mobile applications for SKU tracking, leveraging C#.NET and WCF services
- I played a key role in securing HTTP protocols with HTTPS and integrating Active Directory authentication
- My responsibilities included designing reusable frameworks, optimizing SQL Server tables, and developing PowerShell scripts for automation
- I led the migration of Angular.js applications to Angular 4, improving maintainability and performance
- Additionally, I worked with IBM-DB2, SSIS, and TFS to ensure seamless database interactions and application deployment
- I also contributed to the development of enterprise applications using ASP.NET MVC, VB.NET, and WCF, enhancing Kohl's digital retail operations.

United Airlines

Chicago, IL, USA

Full Stack .NET Developer

November 2015 - May 2017

- At United Airlines, I developed and maintained enterprise applications using .NET Core, ASP.NET MVC, and SQL Server to support airline operations and customer management systems
- I built APIs with WCF and Web API for seamless system communication and implemented Kubernetes for orchestrating microservices
- My role involved designing scalable Oracle PL/SQL queries for transactional data management and integrating authentication mechanisms using JWT and OAuth2
- Additionally, I developed mobile applications using Xamarin and worked extensively with Angular and React.js for UI enhancements
- I played a vital role in optimizing ETL processes, ensuring high data integrity, and streamlining deployment strategies with CI/CD pipelines.

UnitedHealth Group

India

Software Developer

July 2013 - August 2015

- At UnitedHealth Group, I developed web applications using .NET Core, Angular 6, React.js, and SQL Server to support healthcare services
- I implemented JWT and OAuth2 authentication for secure access and built microservices for modular application development
- My role involved automating deployments using Azure DevOps and optimizing NoSQL data storage with MongoDB
- Additionally, I developed complex SQL queries, managed database migrations, and contributed to front-end development with React Native, enhancing mobile healthcare solutions.

SKILLS

Skills: C#, ASP.NET, JavaScript, jQuery, React.js, React Native, TypeScript, Docker, Kubernetes, Agile, SCRUM, Jenkins, NoSQL, MongoDB, BusinessObjects, Tableau, Splunk, Nginx, HTML/CSS, Bootstrap, Python, Java
