

NAIYA JAYESHBHAI ADATIYA

Software Engineer | 508-293-1663 | naiya.adatiya16@gmail.com | Boston, MA | <https://www.linkedin.com/in/naiyaadatiya/>

SUMMARY:

Software Engineer with 4+ years of experience designing, developing, and deploying scalable backend solutions using Java and Python. Specializing in building scalable backend systems and RESTful APIs integrated with React applications. Proficient in cloud technologies like AWS (Lambda, S3, RDS) and microservices architecture using Docker and Kubernetes. Skilled in large-scale data processing with Pyspark and designing ETL pipelines using Databricks and Snowflake. Experienced in optimizing databases (MySQL, MongoDB) and implementing advanced data structures for efficient algorithms. Collaborative team player with a strong track record of delivering high-quality solutions in Agile environments.

SKILLS:

Methodologies: SDLC, Agile, Waterfall

Languages: Python, Java, C, Data Structures and Algorithms

Technologies: Pandas, NumPy, Pyspark, HTML, CSS, AJAX, XML, JSON, JavaScript

Development Tools: PyCharm, Eclipse Java IDE, Visual Studio Code, Jupyter Notebook

Data Structures: List, Set, Tuple, Dictionary, String, Array, Linked List, Stack, Queue, Trees, Graph

Cloud and DevOps Tools: AWS (Lambda, S3, RDS, SNS, SQS, CloudWatch, DynamoDB), GCP, Azure, Databricks, Snowflake, Docker, Kubernetes, Jenkins

Version Control and Collaboration: Git, GitHub, Bitbucket

Web Services and APIs Protocols: RESTful APIs, GraphQL, SOAP APIs, Boto3 (AWS SDK for Python), Requests

Databases: Oracle, SQL Server, PL/SQL, MySQL, MongoDB, Cassandra, Astra Cassandra, SQLite

EDUCATION:

Master of Science in Computer Science Engineering

May 2024

Northeastern University, Boston, MA

Bachelor of Engineering in Information Technology

Aug 2020

Gujarat Technological University, Gujarat, IN

EXPERIENCE:

ServiceNow, MA | Jan 2024 – Current | Software Engineer

- Designed and developed scalable backend services using Java and Python, leveraging multithreading and asynchronous programming to achieve a 20% improvement in system performance and responsiveness.
- Built and integrated RESTful APIs with React-based front-end applications, using Swagger for API documentation and Postman for testing, ensuring seamless data flow and enhancing user experience.
- Deployed and managed cloud-based solutions using AWS services (Lambda, S3, RDS, DynamoDB), implementing auto-scaling and load balancing to improve system scalability and reliability by 25%.
- Collaborated with cross-functional teams in an Agile environment, conducting daily stand-ups and sprint planning sessions to deliver high-quality software solutions within deadlines.
- Optimized database performance by refining queries and implementing indexing and partitioning strategies in MySQL and MongoDB, reducing query execution time by 30%.
- Implemented unit testing using JUnit and integration testing with PyTest, reducing production defects by 25% and improving code quality.
- Managed version control and team collaboration using Git and Bitbucket, implementing branching strategies and code review workflows to ensure efficient code repository management.

Orion Technolab, India | Aug 2019 – Aug 2022 | Software Engineer

- Engineered backend systems using Python and Java, leveraging Pyspark for distributed data processing and optimizing Spark jobs to achieve a 35% improvement in data pipeline efficiency.
- Designed and deployed microservices architecture using Docker for containerization and Kubernetes for orchestration, reducing deployment time by 40% and enhancing system scalability.
- Integrated GraphQL APIs to optimize data fetching, implementing query batching and caching to reduce front-end load times by 40% and improve application performance.
- Implemented AWS CloudWatch for real-time monitoring and SNS for alerting, setting up custom metrics and alarms to achieve 99.9% system uptime and reliability.
- Developed and optimized ETL pipelines using Databricks and Snowflake, implementing parallel processing and data partitioning to process over 1TB daily and reduce latency by 40%.
- Utilized JIRA for defect tracking and project management, creating custom workflows and dashboards to ensure timely delivery of software solutions and improve team productivity by 20%.
- Applied advanced data structures such as trees, graphs, and queues to optimize algorithms, reducing processing time by 25% and improving application efficiency.
- Collaborated with front-end teams to integrate back-end services with React applications, using WebSocket for real-time updates and ensuring a seamless and responsive user experience.
- Conducted code reviews and mentored junior developers, implementing best practices and coding standards to improve team productivity and code quality by 15%.
