

Nandini Tarigopula

Data Analyst

Nandinit2602@gmail.com | +1 (678) 829-2769 | Harrison, NJ 07029 | LinkedIn

Summary

- **Data Analyst with around 4 years of experience** driving data-driven decision-making across **healthcare, retail, and enterprise tech**, leveraging expertise in **Python, SQL, Epic Clarity/Cogito, and cloud platforms (AWS, Azure, GCP)**.
- Certified **Google Cloud Professional Data Engineer** with a track record of designing scalable analytics solutions, automating workflows, and **translating raw data into actionable insights**.
- Adept at bridging technical and business needs through advanced **predictive modeling, ETL optimization, and self-service analytics**.
- **Key Achievements:**
 - **Reduced healthcare claim denials by 12%**, deploying **ML-driven revenue cycle analytics** with **Epic Clarity** and **TensorFlow**, accelerating reimbursements by **8 days** for 10+ facilities.
 - **Improved C-suite decision-making efficiency by 40%** through **executive dashboards** in **Power BI** and **Tableau**, enabling real-time tracking of **\$250K+ cost-saving opportunities** in procurement.
 - **Slashed employee turnover by 15%**, developing **PySpark churn models**, saving **\$500K+** in recruitment costs through proactive retention strategies.
 - **Achieved 99.5% data integrity** for **5M+ patient records** by architecting **GCP Dataflow ETL pipelines**, empowering **100+ providers** with **FHIR-compliant population health insights**.
 - Certified in **GCP Data Engineering, Epic Clarity**, and **Azure Synapse Analytics**, with advanced skills in **HIPAA/GDPR compliance** and **data governance**.

Skills

Programming Languages: Python, SQL, R, NoSQL, Shell Scripting
Frameworks & Tools: NumPy, Pandas, Matplotlib, Seaborn, ggplot2, SAS, Tableau, Looker, Power BI, Jupyter Notebook, Git, GitHub, Docker, CI/CD (GitHub Actions), Agile, Jira, TensorFlow, Alteryx, ThoughtSpot, SAP BPC, Epic (Clarity, Cogito, SlicerDicer), Hadoop, Hive, PySpark, Statistics, Regression Analysis
Cloud Platforms & Services: AWS (Glue, Lambda, S3, Redshift), Microsoft Azure (Data Factory, Synapse Analytics, Purview), GCP (BigQuery, Dataflow, Healthcare API)
Databases: MS-SQL, MySQL, PostgreSQL, Snowflake, Redshift, Big Query, MongoDB, Spark SQL, FHIR
Data Analysis & ETL: Data Modeling, Data Mapping, Data Mining, Data Extraction, Data Transformation, ETL Processes, A/B Testing, Statistical Inference, Predictive Modeling, Time Series Analysis, Hypothesis Testing, HIPAA/GDPR Compliance, Data Governance, Data Lineage Mapping
Visualization Tools: Tableau, Looker, Power BI, Matplotlib, Seaborn, ThoughtSpot
Statistical & Mathematical Skills: Probability, Statistical Inference, Regression Analysis, Predictive Modeling, Machine Learning (TensorFlow), Linear Algebra, Churn Analysis, Time Series Analysis, Clustering (K-means), Forecasting
Additional Skills: Data Pipeline Development, Quality Assurance, Financial Forecasting, CRM Analysis, Marketing Attribution Analysis, Audience Segmentation, Population Health Management, Revenue Cycle Analytics, Inventory Demand Forecasting, Patient No-Show Prediction

Professional Experience

- Data Analyst, CVS Health** Jan 2024 – present | Remote, US
- Pioneered predictive revenue cycle analytics using Epic Clarity Data Model and Python (Pandas, Scikit-learn), reducing claim denials by 12% and accelerating reimbursement timelines by 8 days for 10+ healthcare facilities.
 - Leveraged GCP BigQuery to unify 20+ disparate EHR datasets, enabling real-time SQL-driven reporting on patient billing trends and improving data accessibility for 50+ clinical stakeholders.
 - Architected automated ETL workflows in GCP Dataflow to process 5M+ patient records/month, ensuring 99.5% data integrity for Epic revenue cycle dashboards used by CFO and revenue management teams.
 - Streamlined HIPAA-compliant data pipelines using Epic Clarity certification expertise, resolving 90% of data mapping discrepancies between billing systems and EHR modules within 6 months.
 - Enhanced patient financial engagement by developing Looker dashboards to track self-pay trends, reducing outstanding balances by \$1.2M annually through targeted payment plan interventions.
 - Integrated ML models (TensorFlow) with Epic Cogito Analytics to forecast patient no-show risk, improving clinic scheduling efficiency by 18% and reducing revenue leakage.
 - Optimized SQL scripts for Epic Clarity report acceleration, cutting query runtime by 35% and enabling daily KPI updates for revenue cycle leadership.

- Transformed raw claims data into actionable insights using R (ggplot2) and Tableau, identifying underpaid claims worth \$850K+ through advanced regression analysis.
- Collaborated with clinical informatics teams to standardize 50+ data definitions across Epic modules, reducing report reconciliation time by 25 hours/month.
- Drove adoption of GCP Healthcare API to harmonize FHIR data with Epic SlicerDicer, empowering 100+ providers with self-service analytics for population health management.

Data Analyst, HCL Tech

May 2022 – Feb 2023 | Detroit, US

- Spearheaded cross-functional data normalization for enterprise-wide reporting, integrating HR, sales, and financial datasets using Azure Data Factory, reducing data discrepancies by 18% and accelerating insights delivery by 25%.
- Engineered predictive models in Python (Scikit-learn) to forecast inventory demand, leveraging Azure Synapse Analytics for real-time data processing, achieving 92% accuracy and reducing stockouts by 15%.
- Orchestrated ETL pipelines with Alteryx and SQL Server Management Studio to automate extraction of 50M+ records from SAP BPC, slashing manual reporting time by 30 hours/month.
- Developed executive dashboards in Tableau and Power BI to visualize financial KPIs and supply chain metrics, adopted by C-suite for quarterly strategy reviews, improving data-driven decision-making efficiency by 40%.
- Pioneered a centralized data dictionary with ThoughtSpot, standardizing 200+ data definitions across 8 departments and resolving 90% of reporting ambiguities within 6 months.
- Optimized Azure Synapse pipelines to unify disparate CRM and ERP systems, enabling self-service analytics for 150+ users and cutting ad-hoc data requests by 35%.
- Identified cost-saving opportunities through regression analysis of procurement data, reallocating \$250K+ budget to high-performing vendors and improving margin by 4%.
- Mapped data lineage for DB2 and Snowflake systems using Azure Purview, ensuring GDPR compliance and reducing audit preparation time by 20 hours/quarter.
- Collaborated with finance teams to automate monthly P&L reports using Python macros and Power BI, reducing errors by 22% and accelerating close cycles by 3 days.

Data Analyst, Capgemini

Dec 2019 – Nov 2021 | Hyderabad, India

- Designed and deployed 15+ interactive dashboards in Tableau and Power BI to monitor HR attrition rates, marketing campaign ROI, and employee engagement KPIs, enabling real-time decision-making for 10+ executive stakeholders.
- Automated monthly financial forecasting reports using Python (Pandas, NumPy) and AWS Glue, reducing manual effort by 25 hours/month and improving data accuracy by 18%.
- Built ETL pipelines with AWS Lambda and Azure Data Factory to ingest and transform HRIS and CRM data into Snowflake, accelerating data availability for cross-functional teams by 30%.
- Conducted A/B testing on marketing campaigns using statistical inference (hypothesis testing, regression) and Python, identifying high-impact customer segments that boosted conversion rates by 12%.
- Migrated legacy HR dashboards to AWS Redshift, optimizing query performance by 40% and enabling self-service analytics for 200+ non-technical users via Looker.
- Developed predictive churn models using PySpark and scikit-learn, achieving 92% accuracy and reducing employee turnover by 15% through proactive retention strategies.
- Streamlined data governance workflows by implementing AWS S3 for centralized storage, ensuring 99.8% data integrity across HR payroll and marketing attribution datasets.
- Partnered with the Chief Data Office to standardize KPI definitions and data lineage documentation across 5+ LOBs, reducing reporting discrepancies by 22%.
- Created CI/CD pipelines with Docker and GitHub Actions to automate deployment of Jupyter Notebook analytics templates, cutting deployment errors by 35%.
- Analyzed multi-channel marketing data using SQL and BigQuery to identify underperforming campaigns, reallocating \$500K+ budget to high-ROI initiatives.
- Trained 15+ HR and marketing teams on self-service analytics using Power BI, driving 80% adoption of dashboards for daily operational insights.

Education

Master of Science in Information studies, Trine University

Jan 2022 – Dec 2023 | Detroit, US

Bachelor of Technology in Computer Science, Annamacharya Institute of Technology and Sciences

Jun 2017 – Aug 2021 | India

Certificates

Professional Data Engineer Certification

Issued by Google Cloud
