

Experienced Full Stack Java Developer with Around 5 years expertise in designing and implementing scalable applications for diverse industries. Proven track record in optimizing Java applications, enhancing system performance through advanced JVM tuning and CI/CD pipelines. Skilled in integrating legacy systems and developing robust RESTful APIs to streamline data exchange. Strong in Spring Framework, Hibernate, and cloud platforms AWS and Azure. Effective collaborator and mentor, adept at translating complex business requirements into innovative technical solutions.

SKILLS

Programming Languages: Java, JavaScript, HTML, CSS, SQL, Groovy, XML, JSON

Frontend Technologies: HTML5, CSS3, Bootstrap, Angular, React, Vue.js, JavaScript, TypeScript, jQuery

Backend Technologies: Java, Spring Framework (Spring Boot, Spring MVC, Spring Security), Hibernate, JPA, EJB, RESTful Web Services, SOAP

Relational Databases: MySQL, PostgreSQL, Oracle DB, SQL Server

NoSQL Databases: MongoDB, Cassandra, CouchDB

ORM Frameworks: Hibernate, JPA (Java Persistence API), Spring Data JPA

Build & Dependency Management: Apache Maven, Gradle, Jenkins, Ant, NPM

Version Control Systems: Git, GitHub, GitLab, Bitbucket

Cloud Technologies: AWS (Amazon Web Services), Azure, Google Cloud Platform(GCP)

Containerization & Virtualization: Docker, Kubernetes, Docker Compose, OpenShift

Web Servers: Apache Tomcat, Nginx, JBoss, Jetty

CI/CD Tools: Jenkins, Circle CI, Travis CI, GitLab CI/CD

Testing Framework: JUnit, TestNG, Mockito, Selenium, JBehave, Cucumber, Postman, JUnit5, Espresso (for mobile)

Microservices Architecture: Spring Cloud, Spring Boot, Docker, Kubernetes, RabbitMQ, Kafka

API Technologies: RESTful APIs, SOAP, GraphQL, Swagger/OpenAPI

Message Brokers: RabbitMQ, Apache Kafka, ActiveMQ

Agile Methodologies: Scrum, Kanban, JIRA, Trello

Operating Systems: Linux (Ubuntu ,CentOS ,Red Hat),Windows, macOS

Others: Apache Kafka, Redis, Nginx, AWS EC2, CloudFormation, Elastic Search, Kendo UI, SQS (Simple Queue Service)

PROFESSIONAL EXPERIENCE

Full Stack Java Developer, Cigna Health Care

Aug 2023 – Present

- Designed and developed robust microservices business components using Spring Boot, deployed them in the cloud environment (Azure), and integrated with existing system architecture for scalability and performance.
- Developed Single Page Applications (SPA) using Angular 14/12, Typescript, HTML5, CSS3, and Bootstrap, ensuring responsive and dynamic user interfaces. Also implemented complex data flows and optimized performance using React.js and Redux with techniques like lazy loading and memorization.
- Leveraged J2EE and Hibernate frameworks for backend development, utilizing Spring Dependency Injection for seamless integration with the middle layer, ensuring efficient data management and business logic execution.
- Implemented web services using SOAP, WSDL, JAX-B, and XML for business-to-business communication, and utilized JMS APIs for asynchronous messaging and detailed email notifications to administrators based on backend process status.
- Utilized multiple Spring modules including Spring Core, Spring AOP, Spring MVC, Spring Batch, and Spring Security for enterprise-grade application development, focusing on dependency injection, transaction management, and batch processing.
- Collaborated with business analysts to gather functional design requirements and followed Agile methodology. Ensured code quality through unit testing with JUnit and logging with Log4j, facilitating smooth deployment and maintenance of applications in IBM WebSphere environments.

Technologies: J2EE, Spring, Spring Boot, AngularJS, Angular 14/12, Hibernate, DOM, SOAP, WSDL, JAX-B, XML, IBM WebSphere, EJB, Log4j, JUnit, SQL, Agile, Windows and AZURE.

Java J2EE Developer, Bank of America

Dec 2021 – Dec 2022

- Developed and maintained microservices and REST APIs using Spring Boot, Spring Cloud, and Spring Security, enabling secure and scalable interactions between services and seamless cloud integration on AWS.
- Built responsive web applications using Angular 9, JavaScript, HTML5, CSS3, and Node.js to enhance front-end functionality, ensuring efficient communication with the Spring Boot REST services for a dynamic user experience.
- Designed databases, wrote optimized SQL queries, and created stored procedures in Oracle and MongoDB. Utilized Hibernate frameworks for persistence layer development and data mapping between Java objects and relational databases.
- Implemented event-driven applications using Spring RabbitMQ and Kafka to process and manage asynchronous events, improving system efficiency and decoupling services for better scalability.
- Set up continuous integration and delivery pipelines using Jenkins and automated build processes with Maven for smooth deployment of WAR, EAR, and JAR files on JBoss application server. Managed version control using Git for efficient collaboration and code quality.
- Collaborated in an Agile environment using JIRA for sprint planning and defect management. Developed test cases following Behavioral Driven Development (BDD) methodology, ensuring quality assurance and bug-free deployments across the project lifecycle.

Technologies: JavaScript, Spring boot, Spring Security, Angular 9, Spring Cloud, Rest API, AWS, Oracle, Mongo DB, Jenkins, Maven, Git, Agile, JIRA.

Java Developer, ebay

May 2019 – Dec 2021

- Designed and implemented eCommerce web applications using Java, J2EE, Struts MVC architecture, JSP, Servlets, and Hibernate to deliver a scalable and robust platform, adhering to best design patterns such as Composite View, Singleton, and Data Access Object (DAO).
- Developed and deployed RESTful Web Services using Spring Boot to handle service components, and integrated third-party SMS API for real-time messaging capabilities, enhancing communication features within the application.
- Built interactive user interfaces with JSP, HTML, CSS, JavaScript, and jQuery, adding client-side form validation using vanilla JavaScript for improved user experience and real-time data validation.
- Designed and developed reusable service components within a Service-Oriented Architecture (SOA) using Java and J2EE technologies, ensuring efficient integration between services across the eCommerce platform.
- Worked on MySQL database, writing optimized SQL queries and stored procedures, modifying existing database structures to support new application features and enhance data retrieval performance.
- Implemented Struts Validation Framework for client-side and server-side validation of user input, ensuring data integrity and robust error handling within the application.
- Conducted unit testing using JUnit to validate application functionality and implemented custom logging configurations using Log4J to track system events and debug issues effectively.
- Created comprehensive UML diagrams including use cases, class diagrams, and activity diagrams to represent system requirements, object interactions, and workflow processes, ensuring clarity in application design.
- Actively participated in daily SCRUM meetings within an Agile development environment, ensuring timely delivery of high-quality features across various phases of the Software Development Life Cycle (SDLC).
- Managed application deployment on Tomcat Application Server, setting up and configuring web application modules such as user registration and account creation, ensuring smooth deployment and continuous integration using Maven in NetBeans IDE.

Technologies: Java, J2EE, JSP, SMS API, Java Server Pages Standard Tag Library (JSTL), Servlets, Struts Framework, Hibernate, JUnit, Maven, HTML, CSS, jQuery, jQuery UI JavaScript, Ajax, NetBeans IDE, Tomcat Application Server, UML, CVS, XML/XSL, MySQL, Log4j, JMS

EDUCATION

Master's in computer science, New York Institute of Technology

Old Westbury, NY
