

NIKHIL PATIL

+1 (806) 620-2994 | nikhilpatil4@gmail.com | Canton, MI | linkedin.com/in/nikpatil

PROFESSIONAL SUMMARY

Embedded software leader with 10 years' experience in automotive and medical industries, delivering safety-critical systems, leading cross-functional teams, and driving successful product launches.

EDUCATION

Michigan State University
Master's, Business

August 2023 - April 2025
GPA: 3.72

Texas Tech University
Master's, Electrical Engineering

June 2014 - May 2016

PROFESSIONAL EXPERIENCE

forvia Hella

Northview, MI, USA

Lead Software Engineer (Systems and Scrum Master)

July 2024 - Present

- Led planning and execution of development schedules for GM MLD 1.1 ECU with 135 variants, coordinating with 15 Tier-1 suppliers.
- Analyzed customer interface documents and delivered customized solutions to meet client-specific requirements.
- Coordinated customer-facing deliverables and stakeholder reporting, translating technical progress into executive-level updates and fostering trust with OEM partners.
- Acted as the primary point of contact for customer escalations, addressing development-related issues with tailored solutions.
- Monitored and controlled program progress, effectively managing escalations and deviations to maintain project alignment.
- Implemented Agile practices with JIRA and Confluence, improving sprint planning accuracy by 30% and increasing team throughput while maintaining compliance with ASPICE and ISO 26262 standards.
- Defined software plans for multi-variant ECU programs, aligning engineering execution with OEM goals and internal milestones.

Stryker

Kalamazoo, MI, USA

Staff Software Engineer (Embedded Software engineer)

June 2021 - June 2024

- Led software development and testing for Class 3 medical device launches at Stryker, ensuring compliance with FDA.
- Provided guidance and monitored progress of interns, co-ops, and new engineers.
- Designed and maintained an error configuration to improve error handling processes across software platforms.
- Created MATLAB applications to simulate robot forward and inverse kinematic calculations.
- Developed system test automation using Squish, MATLAB, and Python to simplify regression testing.
- Created End-of-Line fixtures for motor calibration and memory testing.

SL america

Auburn Hills, MI, USA

Software Engineer (Application Engineer)

January 2018 - June 2021

- Acted as liaison with Ford for requirement negotiations and issue resolution.
- Led cross-functional collaboration between software, systems, test, and manufacturing teams, ensuring timely resolution of system-level issues and enabling successful launches for high-volume vehicle programs.
- Developed and tuned a custom PID control module to prevent mechanical failure in the shifter locking mechanism, reducing warranty claims from 14 to 2 per month and improving long-term system reliability.
- Led embedded software development for the Ford F150 and Mustang, focusing on functional safety and system communication.
- Developed AUTOSAR compliant software projects using MATLAB Simulink and Vector DaVinci.

StarCo tech

Longview, TX, USA

Embedded Software Engineer (Firmware Engineer)

May 2015 - December 2017

- Developed drivers for hardware peripherals, integrated USB and Bluetooth interfaces on microcontrollers, and crafted cross-platform USB OTG solutions.
- Developed Android app to control external hardware via Bluetooth.
- Partnered with testing, management, and engineering teams to streamline issue resolution and project delivery.

SKILLS

Skills: MATLAB, Verilog, VHDL, Python, FreeRTOS, TCP/IP, JIRA, Git, Business Analytics, C/C++, Agile, Atlassian, AUTOSAR, Linux/Unix, Management, Product Management, VLSI Design, SCRUM, ALM, Sensors, ISO 26262
