
Test Engineer with over 13 years of experience in Software testing including Functional and automation testing (Selenium web driver) also API and DB testing. Expertise in testing applications including SAP, Web, Android and iOS (Mobile applications).

PROFESSIONAL SUMMARY:

- 13+ years of experience in software testing & Quality Assurance experience in **Functional & Automation testing**
 - 12 years of extensive experience as a QA Engineer/Analyst including diversified experience in Web services API, Client-server/Cloud application, and Android & iOS Device testing. Familiarity with testing Azure Cloud Services.
 - Extensive experience in writing SQL and PL/SQL scripts to validate the database systems and for backend database testing.
 - Experience with **backend database and data migration testing**.
 - Experience with QA Methodology and QA Validations to ensure Quality Assurance control.
 - Proficient in Gathering Data, Test Cases, Execution, Bug Tracking, and Reporting Systems.
 - Written and maintained Automation scripts using **selenium web driver**.
 - Strong knowledge of **Software Development Life Cycle (SDLC)** and **Software Test Life Cycle (STLC)**, experience working with Agile Development Model, and developing user scenarios for testing end-to-end (e2e) functionalities.
 - Troubleshooting and testing service desk issues as an On-call Engineer (OCE).
 - Analysis of product logs to debug and troubleshoot failed scenarios.
 - Used Model Based Testing (MBT) framework for test case creation. Participated in Test Driven Development (TDD) for fast release cycles. Owned Dataset creation for feeding into test cases.
 - Participated in Dev Design Reviews and other phases of the development lifecycle to ensure that the product meets the needs of business, partners, and clients.
 - Developed Test Strategy, Test Plan, Test Cases (Functional and Non-Functional), and Test Scenarios from System Requirement Specifications.
 - Good knowledge of Object-Oriented Programming (OOP) and common Data Structures.
 - Experience with RESTful API testing using SOAP UI tool and JSON payload.
 - Experience owning Unit testing, Functional Testing, Regression Testing, e2e Testing, Integration Testing, User Acceptance Testing (UAT), and Database Testing.
 - Owned creation of Bug (Defect) Report and Defect Life Cycle.
 - Owned Build & Deployment process on a staging server, with hands-on experience with Linux commands.
 - Owned Hosting process and Production Release Process.
 - Established and maintained testing milestones to ensure on-time completion of assignments. Team player with excellent interpersonal communication skills, dedicated and reliable work ethic, able to work independently or as part of a team.
 - QA Methodology & Validation, SOAP Automation for BVTs & Functional tests.
 - Experience in Functional, Integration, Security Testing, System Testing, Compatibility Testing (different proxy & browsers), Regression, and UAT.
 - Expertise in Test Plans, Test Suites, Test Scripts, Test Schedules, and Bug Reporting.
-

EDUCATION:

- B.Tech. (CSE) from NIET, JNTU, and Hyderabad passed out in 2011.
-

ACHIEVEMENTS:

- Received Dr. Reddy's Digital award for the best performance in QA dep.
-

TECHNICAL SKILLS:

Testing Tools: Visual Studio, Eclipse, Selenium, Quality Center, Virtual Machine, API testing tool, Confidential Simulators/Emulators, JIRA, Rally, JMeter, LoadRunner, TestRail, Postman

Bug Tracking: JIRA, Bugzilla, SAP business and You track

Programming Languages: Python, Java, HTML, CSS, JavaScript

Operating Systems: Windows 98/2000/NT/XP/Windows7/Vista, Unix, MAC

Platforms: PC, Console (Xbox, PlayStation, Nintendo), Mobile (Android, iOS)

Web Services Tools: SOAPUI, JMeter, Confidential product, SQL Navigator

Devices: iPhone, iPad, Galaxy, Android etc.

Version Control: Git

CI/CD Pipelines: Jenkins, Azure DevOps

Others: SAP QM, Java, OOP and Data Structure, Test Documentation,

WORK EXPERIENCE:

QA LEAD

BLACKBERRY: AUSTIN, USA

MAY -2023 - PRESENT

Roles and Responsibilities:

- **Led cross-team collaboration for new feature releases**, ensuring end-to-end quality assurance and the reliability of features across development, QA, and other teams, driving seamless delivery and high-quality outcomes.
- Developed **test plans** and was responsible for creating **test strategies** for the **Data Warehouse**.
- Loaded **test data** in the **testing environment** to ensure the tests are performed without issues.
- Performed **Functional Testing, Data Validation, Integration Testing, Regression Testing, and User Acceptance Testing (UAT)**.
- Tested **ETL processes** to ensure that the **source and target** are mapped as per **requirements/specifications**.
- Ensured that **data quality validation** was performed before loading data into the **Data Warehouse**.
- Conducted **initial loading of records** on the **Data Warehouse** and **incremental loading** of records at a later date to verify newly inserted/updated data.
- Performed API testing using **Postman, REST Assured, or SoapUI**.
- Coordination with the team for developing Test Cases, Preparation, and Review of test scripts for test reusability / modularization and Defect Tracking.

- Responsible for monitoring the project status, sending daily reports to senior management and stakeholders, and being involved in Functional, System, Integration, and User Acceptance Testing of all the project releases.
- Confidential applications testing on iOS / Android devices.
- Involved in daily scrum meetings, Scrum grooming sessions, and scrum releases.
- Experience working with data analytics tools for customer-type analytics.
- Test complex website features to ensure that they work across all client-required browsers on PC and Confidential / Tablet testing using emulator and physical devices.
- Automating test scripts using Selenium WebDriver on web-based applications and reporting solutions.
- Providing the test environments for executing the test cases. (Deploying the latest builds, DB backup and restoring it and setup system testing environments).
- Product testing of Web and Mobile Applications.
- Responsible for executing REST API test cases using Postman tool.
- UEM servers build deployment and installation on virtual machines.
- Configuration setup and Profile creation on UEM server.
- Performing Smoke test on new server builds and collecting logs using Log Parser.
- Regression testing on stable builds.
- Involved in Integration testing.
- Test case analysis and configuration setup for the same.
- Communication with peer testers and developers on Test case description clarification and defect fixing.
- Groomed 6 team members in the project via training, mentoring and hand holding tasks.
- Configuring new servers for the team to start testing on.
- Raising defects in Jira for the issues found.
- Experience with Scripted Deployments, NIAP and Darksite Deployments.
- Working experience in Migration concept.
- Working experience on AD and LDAP.

QA LEAD

LAB CORP : ATLANTA, GA.

MARCH -2021 - MAY-2023

Roles and Responsibilities:

- **Led cross-team collaboration for new feature releases**, ensuring end-to-end quality assurance and the reliability of features across development, QA, and other teams, driving seamless delivery and high-quality outcomes.
- Ensured that **data quality validation** was performed before loading data into the **Data Warehouse**.
- Conducted **initial loading of records** on the **Data Warehouse** and **incremental loading** of records at a later date to verify newly inserted/updated data.
- Prepared **scripts, executed tests, and analyzed results** using **LoadRunner** for **Performance Testing**.
- **Enhanced the test automation framework** by increasing reusability and modularity, integrating **Maven** and **TestNG** to streamline build management, facilitate parallel test execution, and improve test efficiency.
- **Defined and implemented comprehensive test strategies** for both **UI** and **API** testing, creating detailed test plans and test cases that ensured thorough coverage of functional and non- functional requirements, addressing both positive and negative test scenarios.
- **Debugged critical production issues** using log analysis tools, identifying root causes and determining appropriate fixes. Developed and implemented effective mitigation plans, minimizing downtime and improving overall system reliability.

- **Authored and maintained comprehensive automation architecture documentation** for both **UI and API automation**, establishing best practices and ensuring alignment with QA and development standards for test automation, leveraging **TestRail** for test case management and reporting.
- **Optimized automation test suites** by implementing parallel execution through Lambda, significantly improving efficiency and reducing test execution time, enabling faster feedback loops and more frequent releases.
- **Conducted extensive regression testing using UI automation**, validating the stability and functionality of existing features before new releases, ensuring seamless user experience and minimizing defects.
- **Drove continuous integration/continuous deployment (CI/CD) automation**, integrating automated regression tests with **GitLab** and **Lambda**, resulting in faster deployment cycles, more frequent releases, and real-time reporting in **TestRail**, thereby ensuring quick feedback on software quality.
- Identify and execute testing for complex and interconnected functionality.
- Validate new content, features and fixes from the development team for both quality and functionality before those changes are submitted to the game.
- Designed the automation scripts for component and regression testing to avoid rework.
- Contribute to and execute on test plans that encompass all data and systems of a feature.
- Write, maintain and execute test cases as necessary.

SR. TEST ENGINEER

DR REDDY'S: LOUISIANA, USA

FEB -2019 - MARCH-2021

Roles and Responsibilities:

- **Conducted thorough Web API testing using Postman**, validating API endpoints for data integrity, security, and performance. Developed and executed comprehensive test suites to ensure APIs met business and user requirements under various conditions.
- **Defined and implemented comprehensive test strategies** for both **UI** and **API** testing, creating detailed test plans and test cases that ensured thorough coverage of functional and non- functional requirements, addressing both positive and negative test scenarios.
- Understanding the user stories of change control process to define the test scenarios.
- Participated in sprint planning and retrospective meetings based on change request raised by plant users.
- Performed Operational and Performance Qualification, UAT testing process as per the Pharmacy industry standards
- Involved in daily scrum meetings, Scrum grooming sessions, and scrum releases.
- Experience working with data analytics tools for customer-type analytics.
- Test complex website features to ensure that they work across all client-required browsers on PC and Confidential / Tablet testing using emulator and physical devices.
- Automating test scripts using Selenium WebDriver on web-based applications and reporting solutions.
- Review and posting bugs in solution manager and tracking the life cycle of bugs until their closure
- Performed test cases execution, documented Test Results
- Designed the automation scripts for component and regression testing of notification creations and approval process for the web application.
- Performed SAP business object testing in QM module, Verified change control notification reports
- Led and mentored a team of four members
- Release Planning and Product Roll Out

- Organized demo sessions for the end users and give support for the user understanding once they launched application in overall branches including Brazil, UK etc.

SR. TEST ENGINEER

LMS (LABORATORY MANAGEMENT SYSTEM) -INDIA

AUG -2018 - FEB-2019

Roles and Responsibilities:

- **Optimized automation test suites** by implementing parallel execution through Lambda, significantly improving efficiency and reducing test execution time.
- **Conducted extensive regression testing using UI automation**, validating the stability and functionality of existing features before new releases, ensuring seamless user experience and minimizing defects.
- Worked in agile methodology. Analysed the Requirements of the client and prepared test plans for sprint basis
- Developed and documented Beehive mobile and web applications high level checklists and test case documents
- Designed the automation scripts for component and regression testing to avoid rework on preparing test user accounts and to retest some modules.
- Prepared weekly status reports for both Beehive web and mobile applications.
- Performed test cases execution, documented Test Results
- Performed Functionality, Performance testing and Compatibility testing on different web browsers (Chrome, fire fox and safari etc.) and different Operating systems like windows, mac etc

SR. TEST ENGINEER

PHLEBO MANAGEMENT-INDIA

JUNE -2017 - AUG-2018

Roles & Responsibilities:

- Analysed the Requirements from the client and prepare test plans
- Performed Functionality testing and Compatibility testing on different web browsers and different Operating systems
- Performed integration testing between phlebo web and mobile applications to verify same data getting updated as expected
- Performed Compatibility test for phlebo app using android and iOS devices of different OS versions.
- Performed test case execution, documented test results
- Reviewed and make sure client feedback changes updated in upcoming builds as per the sprint backlogs
- Responsible for writing Plan, creating Traceability Matrix, maintaining and executing Functional test suites for various System and Regression areas during different project releases.
- Closely work with Product Owners, Business Analysts, Architects, and Dev leads in understanding the User Stories and Technical design of the project.

SOFTWARE TEST ENGINEER

SYNGENTA BARCODE APPLICATION- INDIA

NOV -2015 - MAY-2017

Roles & Responsibilities:

- Understand Functional Requirement Document and Design test cases
- Executed tests with appropriate techniques (manually or by using test execution tools) and document testing failures
- Interact with BA, project manager, development team and client as per need
- Analysed the Defects and identify the root cause
- Performed Functionality testing and regression testing on different devices of Android
- Performed Compatibility test on different Devices and OS versions
- Performed executing Test Cases, documenting Test Results

TEST ANALYST

UC DAVIS -BEEHIVE-USA

APRIL -2013 - NOV-2015

Roles & Responsibilities:

- Followed Agile Methodology which involves daily scrums meetings and Sprint meetings (planning, Review) to meet deadlines and expectations.
- Create a test strategy based on project requirements and schedules.
- Verified consistency across devices, browsers, and operating systems.
- Performed UAT, compatibility testing of ABP (Using different android OS versions and models) and integration testing between different modules.
- Prepared test plans based on changes requested to the existing process or new processes.
- Built test cases from business requirements.
- Worked with functional team members to translate business requirements into technical specifications.
- Provided reliable, timely support of integration, performance and user acceptance testing processes.
- Traced all bugs, issues and tickets using Clear quest..

QA ANALYST

ABP CUSTOMER INTELLIGENCE PLATFORM-INDIA

SEP -2011 - APRIL-2013

Roles & Responsibilities:

- Understand DRD, in vision links and Design test cases. Performed Test Cases, documenting Test Results
- Performed Functionality testing and Compatibility testing on different web browsers and different Operating systems, Review and posting bugs in You Track and tracking the life cycle of bugs until its closure
- Worked at Client location for application support in understanding application with demo
- Involved in Test Cases execution, documented Test Results
