Summary

A Detailed Oriented Business Analyst, with dedicated experience in multiple sectors. A collaborator, fostering partnerships with stakeholders to discern critical business needs and drive improvement initiatives. As an innovative problem solver, consistently striving to drive tangible success for businesses in the competitive landscape. Committed to leveraging analytical skills to enhance decision-making processes and contribute to overall business success.

Technical Skills

- **Project Methodologies:** SDLC, STLC, Waterfall, RUP, Agile Scrum, Rational Requisite Pro
- **Business Process Modeling Tools:** MS Visio, Draw.io, Lucid Chart
- **Visualization Tools:** Tableau, PowerBI, MS Excel, Google Spread Sheets, Snowflake, AWS Athena
- **Data Analysis Libraries:** NumPy, Pandas, TensorFlow, Keras
- **Database:** Oracle, Azure Studio, SQL Server, SAP Hana
- **Defect Tracking/Management Tools:** Jira, Wrike, Azure DevOps
- **BI/ETL Tool:** Informatica, SAP Data Services

Professional Experience

Business Analyst, Paysafe
Remote, USA

09/2023 – Present |

- Gathered and documented comprehensive business requirements to improve SWIFT payment protocols within Paysafe's international transfer application, enhancing transaction processing efficiency for global payments.
- Conducted a thorough GAP analysis of Paysafe's existing SWIFT MT messaging workflows, specifically focusing on MT103 for customer credit transfers and MT202 for financial institution transfers, identifying inefficiencies and cross-border transaction risks. This initiative successfully reduced transaction risks by 17%.
- Developed a mapping mechanism by analyzing the MT 103 SWIFT format and working closely with Technical Managers, addressing essential elements such as MT Network Validation Rules, MT Usage Rules, MT Guidelines, and MT Market Rules.
- Established a traceability matrix using Rational Requisite Pro to ensure requirement completeness across various stages of the SDLC, enhancing accountability and traceability throughout the project lifecycle.
- At PaySafe, I utilized Google Sheets to analyze SWIFT transaction data, track KYC/AML compliance metrics, and optimize cross-border payment validations. I automated data reconciliation between SWIFT MT103/MT202 messages and internal records, enhancing accuracy and minimizing transaction discrepancies. Additionally, I collaborated with stakeholders by providing real-time insights through Google Sheets.
- Conducted an additional GAP analysis to identify gaps between current systems and business requirements, delivering strategic recommendations for process optimization and alignment with business objectives.
- Strengthened compliance procedures by integrating KYC, AML, and sanctions screening within the SWIFT framework, ensuring Paysafe met all regulatory requirements for international transactions.
- Analyzed transactional data from SWIFT messages using SQL and Power BI, identifying trends in payment delays and failure rates, which led to a 27% reduction in transaction errors.
- Supported testing and validation of new SWIFT payment enhancements, ensuring seamless integration with Paysafe's international transfer platform and maintaining compliance with global banking standards.

- Collaborated closely with stakeholders across Paysafe and external banking partners to facilitate the successful implementation of new SWIFT messaging standards, leading to faster and more secure international transactions.
- Developed dynamic dashboards, reports, and customized analyses using SQL, Excel, and Power BI, enabling a real-time view of transaction performance and trends.
- Created and maintained KPI metrics to track project success, ensuring continuous monitoring and reporting on all KPIs and performance metrics.
- Partnered with the Technical Operations Team to strategically enhance the data warehouse by identifying and revising reporting requirements, optimizing Paysafe's data infrastructure for future growth.

Business Analyst, Genpact
Noida, India

03/2020-07/2023 |

- Spearheaded the custom implementation of SAP S/4HANA, significantly enhancing financial and operational efficiency by integrating it with the existing SAP ERP system.
- Integrated and optimized SAP FI-AR and SAP FI-AP modules, improving accounts receivable and payable processes, reducing processing time, and enhancing financial transparency.
- At Genpact, I leveraged Google Sheets for real-time collaboration and automation in financial reporting and data analysis. I developed dynamic dashboards to monitor SAP S/4HANA implementation progress, automated data validation and reconciliation through scripts, and ensured seamless stakeholder collaboration by enabling shared access to live project updates and reports.
- Led decision-making for custom solutions, evaluating the need for enhancements to out-of-the-box SAP solutions to meet specific business requirements, ensuring tailored functionality and optimized performance.
- Utilized tools like Tableau and SQL to analyze business data and workflow processes, creating interactive dashboards for senior management, enabling data-driven decision-making.
- Developed post-launch KPI metrics to measure the success of the SAP S/4HANA implementation, tracking key performance indicators to assess system performance, user adoption, and overall impact on business processes.
- Engaged stakeholders and developed communication plans for change management to ensure smooth transitions, provided training and support to staff, and managed resistance while incorporating feedback for continuous improvement.
- Collaborated with IT teams to design the SAP S/4HANA system architecture, ensuring it met all functional and non-functional requirements, and conducted validation sessions with end-users to guarantee usability and functionality.
- Ensured compliance with relevant regulations and standards by conducting regular audits and implementing necessary security measures to protect organizational data, specifically adhering to GDPR (General Data Protection Regulation).

Business Analyst, LTIMindtree
Pune, India

02/2018-02/2020 |

- Drafted integration & development documentation for custom APIs and determined API readiness lead time. Authored request and response parameters for custom APIs.
- Conducted functional testing of APIs for the integration team.
- Participated in Scrum ceremonies like Daily Stand Up, Sprint Planning, Sprint Review, Sprint Retrospective and Product Backlog Refinements Leveraged Agile methodology to support the software development in a niche Property and Casualty Insurance firm.
- Successfully managed an integration project for Claims between the Appian low code platform and Guidewire.
- Facilitated scope determination and helped develop the Beta Test plan for Readiness testing and Go-Live activities planning.

- Enhanced the development turnaround time by 57% by streamlining the integration requirement process. Managed the development cycle by using JIRA to track EPICS, requirements, and user stories.
- Successfully completed 85% deliverables on time by effectively developing screen mock-ups, wireframes, user interfaces, context diagrams, business process flows, and UML diagrams for requirements communication to system architects. Examined the business procedures and data pathways of existing operations and coordinating with cross-functional teams. Coordinated communication between program leads and Business Unit leaders to ensure alignment and adoption of strategic initiatives such as Service Backed Records.
- At LTI Mindtree, I utilized Google Sheets to track and manage the integration of Claims Payments UI with the payment gateway. I maintained a centralized sheet to log API requests/responses, track defect statuses in Jira, and facilitate real-time collaboration between business analysts, developers, and QA teams, ensuring streamlined communication and faster issue resolution.
- Generated artifacts and completed design documentation like Beta Test plan for readiness testing, Go Live documentation using Confluence, JIRA, Lucid chart.
- Expertise in managing and integrating claim payments UI along with payment gateway for claims.
- Created interactive Tableau dashboards and visualizations to analyze insurance data/claims/premiums.

Business Analyst, Birlasoft
India

01/2016-01/2018 | Noida,

- Revamped FRD and BRD by applying detailed analysis techniques, improving documentation clarity and precision, for alignment with business objectives, and enhancing stakeholder communication, led effective project execution.
- Used advanced Excel and SQL Server's relational database model to structure and query data, streamlining needs collection and tracking, reducing ambiguities, and improving documentation accuracy by 30% for stakeholder alignment.
- Created standardized FRD and BRD templates, for consistent documentation, enhancing communication between stakeholders and development teams, and feeding 20% improvement in project alignment and timely delivery.
- Facilitated workshops to refine and prioritize business needs, applied Agile methodologies to integrate feedback, ensuring documentation adapted to evolving needs and significantly improving project alignment and stakeholder satisfaction
- Developed a feedback loop to update and improve FRD and BRD based on stakeholder input, addressing gaps promptly and enhancing documentation quality while ensuring alignment with business goals and project objectives
- Used refined Excel functions and AWS Glue with AWS Redshift for tracking FRD and BRD versions, automated version control and reporting processes, for up-to-date documentation and transparent project tracking for efficient regime.
- Utilized Power BI to create interactive dashboards for FRD and BRD, enhancing data presentation and accessibility, allowing stakeholders to easily interact with needs data, improving documentation clarity and decision-making by 25%.

Education

Bachelor of Technology, GL Bajaj Institute of Technology & Management
06/2016 | Noida, India
Information Technology
