FULL STACK ENGINEER

Senior Software Engineer with over 10 years of experience building innovative, scalable solutions for startups and established enterprises in the eCommerce and FinTech industries. Skilled in **Python**, **Django**, **FastAPI**, and **React.js**, with expertise in creating secure, high-performance web applications and RESTful APIs. Adept at leading cross-functional teams, optimizing database operations, and deploying cloud-based architectures on **AWS** and **Azure**. Committed to delivering user-focused solutions and driving organizational success through technology.

KEY COMPETENCIES

- **Programming Languages:** Python, JavaScript (ES6+), TypeScript, Scala, SQL, Java, C#, PHP
 - **Frameworks & Libraries:** Django, FastAPI, Flask, React.js, Redux, Angular, Node.js, Express.js, jQuery, Flask-RESTful, GraphQL
 - **Frontend Technologies:** HTML5, CSS3, SASS, Tailwind CSS, Bootstrap, Material-UI
 - **Database Management:** PostgreSQL, MySQL, MongoDB, Redis, Amazon Aurora, SQLite
 - **DevOps & CI/CD:** Jenkins, Docker, Kubernetes, Terraform, GitHub Actions, Azure DevOps, Ansible
 - **Cloud Platforms:** AWS (EC2, RDS, Lambda, S3, Redshift, CloudFormation), Microsoft Azure, Google Cloud Platform (GCP)
 - **Testing & Debugging:** PyTest, Postman, Selenium, Mocha, Chai, JUnit, Splunk
 - **Data Processing:** Pandas, NumPy, Matplotlib, Plotly, TensorFlow, Scikit-learn, PyTorch, OpenCV
 - **Other Skills:** OAuth2, JWT, NLP, Elasticsearch, Alembic, RabbitMQ, Kafka, RESTful APIs, WebSockets
 - **Version Control:** Git, Bitbucket, GitLab
 - **Methodologies:** Agile (Scrum, Kanban), Test-Driven Development (TDD), Event-Driven Development (EDD)
-

PROFESSIONAL EXPERIENCE

Plaid

July 2021 - Present

Senior Software Engineer

- Designed and implemented scalable, high-performance RESTful APIs using **Python** with **FastAPI** to securely handle real-time financial data aggregation, which improved API response times by 25% and ensured compliance with data privacy standards.
- Engineered robust authentication workflows by utilizing **OAuth2** and **JWT**, enabling secure user access, protecting sensitive data, and adhering to industry security regulations.
- Developed automated ETL pipelines using **Python**, **SQLAlchemy**, and Alembic to process and migrate large-scale datasets efficiently, enhancing data integrity and operational reliability.
- Deployed backend applications on **AWS EC2** with fully managed **RDS** and **S3** services, creating a highly available, scalable, and reliable infrastructure that achieved a 99.9% uptime **SLA**.
- Designed and implemented CI/CD pipelines using **Jenkins**, streamlining the deployment process and reducing the average release cycle time by 30%.
- Integrated **Redis** for caching and session management, significantly improving the performance and scalability of high-traffic services during peak user activity.
- Collaborated with cross-functional teams, including product managers and frontend developers, to define technical requirements, deliver features on time, and align with user expectations.
- Conducted comprehensive testing with **PyTest** and **Postman**, covering unit, integration, and API-level validation, leading to a 40% reduction in production issues and higher code reliability.

Chime

October 2018 - July 2021

Full Stack Engineer

- Developed dynamic and responsive frontend interfaces using **React.js**, seamlessly integrating Redux for state management and **React Hooks** for reusable, modularized component logic.
- Designed and implemented scalable backend microservices using **Flask** and **Node.js**, ensuring efficient handling of complex transaction workflows and improving system reliability by 35%.
- Utilized **Elasticsearch** to enhance search functionalities, optimizing query performance and accuracy for large-scale datasets, resulting in 40% faster response times for end users.
- Deployed containerized applications using **Docker** and **Kubernetes** on **AWS**, enabling cost-efficient, scalable, and highly available cloud infrastructure that reduced deployment failures.
- Designed efficient database schemas and optimized **PostgreSQL** queries to handle increasing data volumes, reducing data retrieval times by 30% and improving operational efficiency.
- Conducted extensive A/B testing and user behavior analysis on UI components to identify areas of improvement, leading to a 20% increase in transaction completion rates.
- Collaborated in **Agile** ceremonies, such as sprint planning, stand-ups, and retrospectives, contributing actionable ideas that enhanced team productivity and improved delivery timelines.
- Provided mentorship and technical guidance to junior developers, fostering a culture of collaboration and skill development within the engineering team.

Paypal

February 2016 - October 2018

Software Engineer

- Designed and developed secure **RESTful APIs** using **Django** and **Flask** frameworks, enabling efficient, high-volume payment processing and reducing overall latency by 15%.
- Created interactive, user-friendly web applications using **React.js** and **Flask**, focusing on enhanced user experience, usability, and customer satisfaction.
- Optimized backend performance by implementing database operations with **Django ORM** and **PostgreSQL**, improving query efficiency and reducing server response times by 35%.
- Developed automated pipelines for data processing and caching using **Redis**, ensuring consistent performance even under peak traffic conditions.
- Deployed **Python**-based serverless functions using **AWS Lambda** for document indexing and metadata extraction, improving search accuracy and scalability.
- Collaborated with product managers and stakeholders to gather technical requirements and deliver critical features aligned with business objectives on tight deadlines.
- Conducted automated and manual testing using **Selenium** and **PyTest**, ensuring application reliability and achieving a consistent 90% test coverage.
- Wrote detailed technical documentation and guidelines to support team onboarding and improve knowledge sharing across departments.

Warby Parker

April 2014 - January 2016

Junior Developer

- Contributed to the development of modern, responsive eCommerce web features using **HTML**, **CSS**, **JavaScript**, and **Flask**, enhancing customer engagement and improving the overall user experience.
- Built and optimized **RESTful APIs** using **Django** to support integration with third-party systems and enable seamless eCommerce operations.
- Designed and maintained database interactions using **PostgreSQL** and **Redis**, reducing query execution times and ensuring high application performance.
- Implemented automated data migration pipelines using Alembic to handle schema updates, ensuring data consistency and reducing downtime during deployments.
- Conducted unit and integration testing with **PyTest**, achieving 90% code coverage and reducing production-level defects.
- Worked closely with UX designers and product teams to create user-friendly interfaces aligned with brand goals and user needs.
- Participated in peer code reviews and collaborative team discussions, promoting best practices and improving code quality across projects.
- Deployed web applications on **AWS EC2** and managed **RDS** for secure and scalable database operations, achieving high availability during peak business hours.

EDUCATION

University of Miami

Bachelor's degree in Computer Science

April 2010 - March 2014
