

Professional Summary:

- About 7+ years of experience as a senior Python Developer in analytical programming using Python, with expertise in software analysis, design, development, testing, and deployment.
- Solid understanding of how to use multiple Python libraries to speed up development (libraries used: Beautiful Soup, SciPy, Matplotlib, python - twitter, Panda's data frame, network, urllib2, MySQL, NOSQL, dB for database connectivity, JSON libraries)
- Contributed to the creation of a Restful service utilizing the Python Flask framework.
- Developed Django-based web apps for calculating insurance premiums.
- Developed entire frontend and back-end modules using python on Django Web Framework with GIT
- Successfully Migrated the Django database from SQLite to MySQL to PostgreSQL with complete data integrity.
- Working in UNIX environment in developing the application and familiar with all its commands.
- Hands on Experience in Data mining and Data warehousing using ETL Tools and Proficient in Building reports and dashboards in Tableau (BI Tool).
- Exposure in building CI/CD pipelines in container-based fashion using Docker, Jenkins, UBUNTU, and Ansible, GitLab.
- Complete data integrity was maintained during the migration of the Django database from SQLite to MySQL to PostgreSQL.
- Experienced with GITHUB, GITLAB, SVN and MAVEN build tool.
- Proficient in using Confidential Web Services AWS. Extensive experience focusing on services like EC2, VPC, Cloud Watch, Cloud Front, Cloud Formation, IAM, S3, Confidential RDS, Elastic Cache, SNS, SQS.
- Configured AWS Identity and Access Management (IAM) Groups and Users for improved login authentication.
- Working on the program in a UNIX environment and being familiar with all of the commands.
- Hands on experience in design and development of Unix Shell Scripting as a part of the ETL Process to automate the process of loading.
- Automate different workflows, which are initiated manually with Python scripts and Unix shell scripting.
- Experience in Creation and managing user accounts, security, rights, disk space and process monitoring in Solaris and Red hat Linux.
- Experienced on working with Docker for creating images that are deployed on AWS as Microservices and Experienced on managing the local deployments in Kubernetes and creating local cluster and deploying application containers.
- Worked in agile and waterfall methodologies with high quality deliverables delivered on-time.
- Experience in Implementation of MVC/ MVW architecture using Servlet, Django, and RESTful, SOAP web service and
- Experience with continuous integration and automation using Jenkins.
- Experience with Unit testing/ Test driven Development (TDD), Load Testing in JIRA, JENKIN

Education:

- Bachelors of Engineering in Information Technology, India - 2019

Technical Skills:

Languages	Python, SQL, C, C++
MVC Frameworks	Django, Flask
Web Services	RESTful APIs, JSON
Database	MySQL, Oracle, Mongo dB, PostgreSQL, Cassandra
Integration Tools	Jenkins, Docker
IDEs	PyCharm, Atom, Sublime Text, Vim
Web	HTML, CSS, JavaScript, jQuery, Bootstrap
Methodologies	Agile, Scrum, Spiral, Waterfall
Version Control	Git, Bitbucket, SVN
Frameworks	Django, Flask
Protocols	TCP/IP, HTTP/HTTPS, SOAP
Scrum Methodologies	Agile and waterfall
Web Servers	Apache, Tomcat, HTTP Server
Bug Reporting Tools	JIRA, Bugzilla and Collab Net

Work Experience:

Sr. Python Developer
June 2023 to Present

Client: Hub International

Responsibilities:

- Developed high level interactive web pages using Django Rest Framework, and CSS, Javascript, Bootstrap, Django template language combination.
- Developed authentication system which integrates the Okta and Microsoft provided authentication and authorization techniques into Django backend.
- Integrated the seamless session handling logic for not allowing the user to have multiple sessions at a point of time.
- Responsible for gathering requirements, system analysis, design, development, testing and deployment.
- Participated in the complete SDLC process.
- Developed web-based open stack applications using Python and Django for large dataset analysis.
- Extensively used regular expressions and core features in Python using lambda, map, reduce etc. and effectively implemented logging feature using python logging library and profiling using cProfile
- Used Numpy for Numerical analysis for Insurance premium.
- Created an on-premises CI/CD solution using Jenkins and the Pipeline plugin which uses pipeline as code.
- Creating restful web services for Catalog and Pricing with Django MVT, MySQL, and MongoDB.
- Developed tools to automate some base tasks using Shell Scripting, Python.
- Used Jenkins pipelines to drive all micro services builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes.
- Worked on AWS EC2/VPC/S3/SQS/SNS based on automation Terraform, Ansible, Python, Bash Scripts.
- Responsible for configuring NoSQL databases like Apache Cassandra and Mongo DB to for increasing compatibility with Django.
- Identified Various Data Components throw XML/Jason and CSV Data files
- Used RESTful Web Services in the application development.

- Develop programs to automate the testing of controller in CI/CD environment using Python, Bash script, Git and Linux command line.
- Developed a Python data processing pipeline that pulls data from many sources, handles synchronous and asynchronous requests, processes, and dumps/ingests data into various data repositories/databases.
- REST APIs were created with Python 3.x, FastAPI, and Flask REST Plus, and were deployed with Docker and Kubernetes (K8S).
- Developed low-latency, high-performance APIs that enable declarative data fetching with GraphQL to facilitate client-heavy data analytic processes using subscription models (Graph Query Language).
- Developed APIs that allow for seamless integration of science and data science, allowing Data Scientists to build machine learning models and conduct various Machine Learning activities.
- Responsible for configuring a Python REST API framework utilizing Flask and FastAPI, as well as delivering interactive Open API Standard (aka. Swagger) API documentation to other cross-functional teams.
- Heavily leveraged Python's graphics APIs for creating graphics and serialization libraries for encoding data in XML/JSON formats.
- Having experienced in Agile Methodologies, Scrum stories and sprints experience in a Python based environment, along with data analytics, data wrangling and Excel data extracts.
- Developed Docker container based micro services using Spring Boot and deployment on Kubernetes cluster.
- Worked under DEVOPS environment for continuous integration and continuous deployment using Jenkins and puppet.
- Proficient in developing websites and web applications using MYSQL, AWS, Flask, HTML, XML, JSON, CSS, Java Script & AJAX.
- Configured and deployed project using the Amazon EC2 on AWS.
- Designed and developed data management system using MySQL. Involved in Agile Methodologies and SCRUM Process.
- Created unit test/regression test framework for working/new code.
- Create Pyspark frame to bring data from DB2 to Amazon S3.
- Using version control tool - Git with Jenkins to accumulate all the work done by team members.
- Using agile methodology - SCRUM, along with JIRA for project...
- Responsible for debugging and troubleshooting the web application.
- Participated in writing scripts for test automation

Environment: Python 2.7, Django, C++, MySQL, Oracle 11.2, Linux, CI/CD, Eclipse, Shell Scripting, HTML, Jason, SVN, CSS, AJAX, Bugzilla, JavaScript, Apache Web Server, Apache spark, Git, Jenkins.

Python Developer

June 2022 to June 2023

Client: Ford

Responsibilities:

- Implemented the model view control architecture in web applications using the Django Framework.
- Use Python, Django, Pyramid, Flask, Web2py, HTML, and other web technologies to create consumer-facing features and applications.
- Developed web apps using the Flask framework and the MVC architecture.
- Using Python, Bash script, Git, Linux command line, and Java Script, create programs to automate controller testing in a CI/CD environment.
- Design, build and manage the ELK (ElasticSearch, Logstash, graphite, Kibana) cluster for centralized logging and search functionalities for the App.
- Worked on container snapshots, attaching to a running container, uninstalling images, maintaining director structures, and managing containers using Docker. Docker was used to virtualize the images.
- Development of Python APIs for debugging array structures in the Processor at the point of failure.
- Create, administer, and maintain an ELK (ElasticSearch, Logstash, Graphite, Kibana) cluster for the App's centralized logging and search functionality.

- Worked on with Docker's container snapshots, attaching to a running container, removing images, managing director structures, and managing containers. Virtualized the images by using the Docker files.
- Used python libraries like Beautiful Soap, NumPy and SQLAlchemy.
- Implemented Bash, Perl, Python scripting to automate many day-to-day tasks.
- Created Business Logic using Python to create Planning and Tracking functions.
- Used web services like Amazon Web Services (AWS) EC2, AWS S3, Auto scaling, Cloud watch and SNS.
- Implemented in Jenkins for Continuous Integration and for automating all builds and deployments and Build Jenkins jobs to create AWS infrastructure from GitHub repos containing Terraform code and Installed and Administered Jenkins CI for Maven Builds.
- Worked in NoSQL database on simple queries and writing Stored Procedures for normalization and renormalization.
- Implemented CI/CD pipeline using Jenkins, Ansible Playbooks and Ansible Tower
- Designed and developed data management system using MYSQL.
- Experience in handling REST and SOAP, API Web Services and have Knowledge of Servers like Apache Tomcat and Web Logic
- Integration of data storage solutions using Django ORM system for MongoDB.
- Used Unit Test Python library for testing many programs on python and other codes.
- Developed and Tested features of dashboard using CSS, JavaScript, Django, and Bootstrap.
- Wrote Stored Procedures in SQL and Scripts in Python for data loading.

Environment: Python 3.4, 2.7, Django 1.9/1.7, SQL, Java Script, Numpy, Linux, Shell Scripting, Mongo DB HTML, Angular JS, CSS, MySQL, CI/CD, Bootstrap, Amazon S3, AWS

Python Developer

June 2018 to Dec 2021

Client: NORTHERN TRUST

Responsibilities:

- Representation of the system in hierarchy form by defining the components, subcomponents using Python and developed set of library functions over the system based on the user needs.
- Developed tools using Python, Shell scripting, XML to automate tasks.
- Enhanced by adding Python XML SOAP request/response handlers to add accounts, modify trades and security updates.
- Build and deployed the code artefacts into the respective environments in the Confidential Azure cloud.
- Implemented RESTful Web-Services for sending and receiving the data between multiple systems.
- Developing scalable and reusable database processes and integrating them.
- Worked on SQL and PL/SQL for backend data transactions and validations.
- Installing and automation of application using configuration management tools Puppet and Chef.
- Using python NLTK tool kit to be used in smart MMI interactions.
- Supported development of Web portals, completed Database Modelling in PostgreSQL, front end support in HTML/CSS, JQuery.
- Assess the infrastructure needs for each application and deploy it on Azure platform.
- Involved in various phases of the project like Analysis, Design, Development, and Testing.
- Developed a Front-End GUI as stand-alone Python application.
- Debug application deployments on multiple levels.
- Involved in development of Web Services using SOAP for sending and getting data from the external interface in the XML format.
- Trained and documented initial deployment and Supported product stabilization / debugging at the deployment stage.
- Designed and maintained databases using Python and developed Python based API (RESTful Web Service) using FlaskSQL Alchemy and PostgreSQL.
- Used Django & Flask framework for API creation and application development.
- Used private Git for the version control.

Environment: Python 3, Django, Rest, Apache Tomcat, Azure, MS Team Foundation Server, jQuery, HTML, CSS, JSON, XML, JIRA, PyCharm.
