

Pranabesh Das
Lead Integration Engineer

M: +1-704-421-0993
Email: Pranabesh.cetb2@gmail.com

Summary:

Having more than 17 years of experience specializing in EDI technologies and integrations across diverse tools & domains, including Retail & Transportation, Healthcare, Shipping and Supply Chain Platforms. Skilled in architectural programming, design implementation, application development, and deployment. Proven ability to lead teams, manage change, drive enhancements, and deliver maintenance and support for production projects while collaborating with global MNCs.

Technical Skills:

- **EDI (Electronic Data Interchange-Middleware):** Seeburger BIC, BIS Frontend, Oracle Fusion Cloud ERP, OIC, EPICOR ERP, EDI HQ, JIRA, JSON, Open Text GX S Application Integrator 5.0, IBM ITX (or WTX), DSTX 8.1, EDI Mercator, Commerce Manager, Axway Cyclone Interchange 5.7
- **EDI Message Types:** Most of the 8-Series and 3-Series X12 Transactions and Shipping Related EDIFACT Transactions like CODECO, COARRI, COPARN, COPRAR, BAPLIE, IFTMBF, IFTMBC etc
- **Tools &Tech:** Oracle Fusion Cloud ERP, Order2Cash Architecture, Oracle Integration Cloud(OIC), EDI HQ, SPS Commerce, 1EDI Source, EPICOR ERP, 1EDISource, EDIHQ, Ascential Data stage TX 8.0, IBM Transformation Extender (ITX) or WTX (WebSphere Transformation Extender), GX S AI 5.0, IBM Sterling Integrator, GITS, Commerce Manager and WebSphere MQ 6.0, ServiceNow, Seeburger BIC MD, BIS Frontend, BIS Developer Studio, Message Tracker, EDI X12, EDIFACT, XML, JSON, SEEXML File Formats, Flat File Structures, Confluence, JIRA, ServiceNow (SNOW) Experience, SQL Server
- **Languages:** Core Java, J2EE, JSP, SharePoint
- **Networking:** FTP, SFTP, AS2, SMTP, VAN, VPNs, Firewalls

Education/Certification:

- Certified as Professional Scrum Master (PSM) from Scrum.org with Experience as Agile Coach and SCRUM Master.
- Executive MBA in International Business from Indian Institute of Foreign Trade (IIFT), Kolkata, India
- Bachelor of Technology (B. Tech) in Computer Science & Engineering, Bhubaneswar, India

Professional Experience:

Nutrisystem Inc., Philadelphia, PA (Full-Time) || July 2022 - Present || Lead Integration Engineer

Project 1: EPICOR to Oracle Cloud Migration

- Recently worked with my Integration Team in migrating the EPICOR ERP to Oracle Cloud Application with seamless integration and optimized efficiency throughout this complex migration.
- Was extensively involved in the Order-to-Cash (O2C) flow with my responsibilities spanned across all stages of the O2C process, including Order Management, Credit Management, Order Fulfillment, Order Shipping/Tracking/Updates, Invoicing n Accounts Receivables.
- Designed and implemented End-to-End EDI architecture in DEV, Test, UAT and Prod environments, including requirement gathering, business integrations and establishment of communication protocols with our 40+ Retailers.
- Ensured that all retailer transactions received through the EPICOR VAN are translated from the EDI-specific format to an Oracle-supported XML format with all the mapping specific requirements present and interfaced at Oracle ERP for both inbound and outbound data exchanges.
- Validated the interfaced transactions in Oracle Fusion ERP and provided ongoing monitoring and support until Sales Orders/Transfer Orders are created, shipped through warehouses (with tracking and updates), and invoices are generated and Account Settlement initiated.
- Managed contract negotiations, communication protocol designs, installations, patch applications, and setups etc.

Project 2 – OMS (Order Management System) with Seeburger

- Providing L1/L2 Support for maintaining and enhancing the File Transfers, Mapping changes, Configuring for FTP, SFTP, AS2 setups etc in Seeburger BIS Application.
- Setting up trading partners with EDI X12 transactions, including 850/875, 860, 940, 945, 810/880, and 820 message types. Upgrading various environments and performing various Tests like Load, Regression and Functional etc
- Designing and developing new maps using communication protocols such as AS2, FTP, and SFTP in BIS MFT Application and managed file formats like X12, Flat File, CSV, and XML.

- Managed EDI projects to meet customer, vendor, and retailer needs while collaborating with third-party EDI service providers such as SPS Commerce, TechDynamics, and 1EDISource.
- Led and coordinated testing teams for end-to-end transaction verification and production implementation with multiple retailers/trading partners, internal business units, and both onsite and offshore IT teams, ensuring detailed project planning and status tracking.

A.P. Mollar MAERSK, Charlotte, NC (Full-Time) || April 2019 – July 2022 || Lead EDI Engineer

Project – 1

Development of New Supply Chain Management (SCM) Platform:

- Worked and Led the Seeburger BIC Mappers team to develop the new SCM platform for Maersk, to manage its global supply chain business with competitive advantages such as improved efficiency, innovation, and market differentiation.
- Worked in an Agile way with IT Analysts, Architects and Platform leaders on a regular basis to understand the business specification and requirements for development of various EDI messages for the customers.
- Developed various utility maps, new partner and process maps for the messages like Purchase (and Change PO) Orders, Shipping Instructions, Carrier Booking and Confirmation messages, Control & APERAK Messages, IFTSTA, ASN etc.
- Worked with JSON structures and ANSI n EDIFACT messages. Also, XML n flat files.
- Developed many global procedures for various External n Internal tables lookups.
- Supported and maintained the maps and Frontend configurations for the existing customers.
- Trained to work on the BIS mapping designer tool from Seeburger.

Project – 2

- Led the analysis, design, mapping, and development of EDI translation maps using GXS Application Integrator tools, following Agile methodologies and participating in SCRUM ceremonies.
- Managed day-to-day operations of the Development Team, including map development, operational support, crisis management, change management, and process documentation.
- Provided strategic planning and technical input for application roadmaps, product upgrades, and related projects, ensuring alignment with organizational goals.
- Configured and enhanced EDI transactions such as 300, 301, 310, 315, 850, 855, 820, 810 (X12 standard) and CODECO, COARRI, COPARN, COPRAR, BAPLIE (EDIFACT) using Trade Guide and AMPS.
- Set up end-to-end trading partner configurations, including trading partnerships, partner-specific rules, and transaction setups, while resolving issues and implementing enhancements to existing maps.

IBM Pvt Ltd. (Full-Time) || July 2010 – March 2019 || Technical Lead & Manager-EDI Integrations

Project – 1

Client - Maersk Line(eBIS), Charlotte, USA (June 2014 to March 2019)

- Led the analysis, design, mapping, development, testing, and implementation of EDI translation maps using GXS Application Integrator tools.
- Enhanced and configured EDI maps for both inbound and outbound interfaces, including transactions like 850, 855, 820, and 810 (X12 standard), while setting up trading partner profiles using Trade Guide.
- Managed end-to-end partner configurations, including trading partnerships, partner-specific rules, and transaction setups, ensuring seamless data flow.
- Resolved high-priority tickets, provided daily operational support, and monitored inbound/outbound message flows through AMPS, addressing file failures and server outages.
- Conducted regular status meetings with leadership teams, providing updates on progress, escalations, and forecasts while maintaining effective communication and issue resolution.

Project – 2

Client - Amerisource Bergen Co. (ABC EDI), USA (August 2010 to May 2014)

As EDI offshore Team Member for Pharmaceutical Distribution company AmerisourceBergen and responsible for development and enhancement of existing EDI maps and for Production Support and timely resolution of critical production issues.

- Responsible for production support and Production Server Monitoring.
- Solved critical problems bounded with SLA which requires thorough system knowledge, teamwork and direct communication with client and their clients and suppliers.
- Worked in development and enhancement projects like EDI map developments and enhancements in Datastage TX tool.
- Configured different types of EDI transactions like 820,824,835,837,270,271,276 etc for X12 standard.
- Needed to constantly monitor incoming orders through other ordering systems like AS2, Cyclone and CSOS etc.
- Developed the communication setups for AS2, FTP n SFTP through Axway Cyclone Interchange 5.7
- Trained new team members and helped them work in development projects which involved critical change in existing functionality.

Technology: EDI Technology

Tools: Cyclone, IBM Transformation Extender (ITX) or formerly known as EDI WTX, Datastage TX, Axway Cyclone Interchange, Commerce Manager

Infosys Technologies Ltd., India (Full-Time) || January 2007 – July 2010 || Senior Software Engineer

Project – 2

May 2008 to July 2010, APL EDI, USA

Worked in the Retail sector for client APL-NOL. This is a Support cum enhancement project, proposed by Infosys which involved having a single team to take care of end-to-end EDI service which includes Helpdesk Monitoring, Production Support and Enhancements with programmer profile resources.

- Developed new maps to comply with Trading Partners requirements (850, 856,810, 852, 300, 304, IFTMIN) and full integration.
- Resolved production support issues involving EDI data flow and errors in EDI data content for ANSI X12 and EDIFACT transactions.
- Provided Level2 support for EDI Team and coordinated with interfacing teams to resolve system issues involving EDI data flow.
- Responsible for all error issues with inbound (850, 860, 940, 943, 856) and outbound (856, 943, 945, 810, 820) ANSI X12 EDI transactions and EDI EDIFACT transactions.
- Worked on Axway Cyclone Interchange 5.7 to manage the Communication Setups for different EDI transactions.

Environment: Windows, UNIX server

Technology: EDI Technology

Tools: Cyclone, IBM Sterling Integrator 5.3, Axway Cyclone Interchange, Commerce Manager

Project -1

April 2007 to May 2008, BEKINS VAN LINES, USA

This project deals with the legacy system conversion. The existing mainframe system of Bekins will be converted in to Web application. We are the team who are actually working on the Requirement elaboration and reverse engineering part. We are finding out how the current system is working and what are the business logic involve into it. We are incorporating those required business logics in optimized way in the web application so that they can reduce the maintenance cost in the new system. Beginning from the design of DLD and HLD, I have coded the use cases with the help of Mainframe team and then test it individually and then the part of integration as well as System and User Acceptance testing.

Technologies: Java, J2EE, JSP
