Professional Summary:

Senior Full Stack Java Developer with 7+ years of experience delivering secure, scalable, and cloud-native enterprise applications across banking, healthcare, and technology domains. Expert in architecting Spring Boot microservices and implementing DevSecOps pipelines on AWS/Azure/GCP, with deep experience embedding modern security frameworks (OAuth 2.1, OWASP, SAST/DAST). Proven success in transforming legacy systems into distributed, high-performance applications that enhance reliability, compliance, and operational efficiency.

Core Technical Skills

- **Languages:** Java 8–21, Python, TypeScript, JavaScript (ES6+), SQL, PL/SQL
- **Frameworks:** Spring Boot 3.x, Spring Cloud, Spring MVC, Spring Security, Hibernate, React, Angular, Node.js, Express.js, GraphQL
- **Cloud & DevOps:** AWS, Azure, GCP, Docker, Kubernetes (EKS/AKS/OpenShift), Jenkins, GitLab CI/CD, Terraform, ArgoCD
- **Security:** OAuth 2.1, JWT, SAML, OWASP, SAST/DAST, SonarQube, Fortify, Zero-Trust IAM
- **Databases & Messaging:** PostgreSQL, Oracle, MongoDB, Redis, Kafka, RabbitMQ
- **Monitoring & Testing:** JUnit, Mockito, Selenium, Postman, JMeter, Grafana, Prometheus, OpenTelemetry, Splunk

PROFESSIONAL EXPERIENCE

Full Stack Java Developer | City National Bank, Los Angeles, CA

April 2024 – Present

- Led backend modernization efforts by decomposing the monolith into distributed Spring Boot 3.x microservices, designed for horizontal scaling and resilience under high-volume workloads — achieving sub-150 ms average API latency.
- Developed RESTful and GraphQL APIs using Spring Cloud Gateway, Spring Security, and JWT, enabling secure and seamless integration between customer-facing portals and the bank's core systems.
- Implemented OAuth 2.1 authentication with AWS IAM role policies, enforcing Zero-Trust access controls and protecting sensitive endpoints across multiple cloud environments.
- Engineered event-driven workflows using Apache Kafka Streams to support real-time transaction validation, ledger synchronization, and fraud alerting — improving throughput and reliability by 35%.
- Built a DevSecOps CI/CD pipeline in Jenkins, GitLab CI, and ArgoCD, integrating SonarQube, Fortify, and OWASP ZAP for continuous vulnerability scanning and security gating.
- Containerized and deployed all services via Docker and Kubernetes (EKS) with Helm + Terraform IaC, ensuring environment consistency and automated scaling across production clusters.
- Established observability and performance telemetry using Prometheus, Grafana, and OpenTelemetry, providing end-to-end tracing of API performance, latency, and error metrics.
- Collaborated with cybersecurity teams to conduct penetration testing and remediate OWASP Top 10 vulnerabilities, maintaining PCI-DSS and ISO 27001 compliance.
- Optimized database and JVM performance, tuning SQL queries and heap configurations to improve response time by 25% and reduce compute overhead.
- Mentored junior developers and led code reviews using JUnit and Mockito frameworks to enforce testing standards and ensure secure, maintainable code delivery.
- Partnered with enterprise architects to define service design standards and best practices adopted across engineering teams.

Tech Stack: Java 17 | Spring Boot 3.x | Spring Cloud Gateway | Docker | Kubernetes (EKS) | Terraform | AWS | Jenkins | GitLab CI/CD | Kafka Streams | PostgreSQL | Prometheus | Grafana | OpenTelemetry

Full Stack Java Developer | FCB Health New York, New York, NY

December 2022 – April 2024

- Architected and developed a distributed microservices ecosystem using Spring Boot, Spring Cloud, and React, enabling secure and responsive access to patient data, claims, and appointments.
- Designed RESTful and event-driven APIs secured with Spring Security, OAuth 2.0, and JWT, ensuring full encryption of Protected Health Information (PHI) in transit and at rest.

- Implemented asynchronous data streaming with Apache Kafka and Kafka Connect for near real-time claim validation, appointment scheduling, and insurance notifications — reducing data latency by 40%.
- Developed serverless components using AWS Lambda, API Gateway, and DynamoDB, providing cost-efficient scalability and cutting infrastructure costs by 25%.
- Automated infrastructure provisioning with Terraform IaC, creating reusable templates for secure, repeatable multi-environment deployment of VPCs, EC2s, and IAM roles.
- Integrated security automation into CI/CD pipelines (Jenkins, GitLab, ArgoCD), embedding SonarQube, Fortify, and Snyk to ensure 95%+ code quality and early vulnerability detection.
- Implemented Zero-Trust policies using AWS IAM RBAC and custom JWT claims, providing fine-grained access control for multi-tenant healthcare APIs.
- Built asynchronous ingestion pipelines with Kafka, Redis, and AWS SNS/SQS, decoupling services and improving throughput by 35% under high-load traffic.
- Automated multi-environment infrastructure provisioning and deployment using Terraform IaC, Docker, and Helm charts across AWS ECS/EKS, enabling 99.9% uptime, auto-scaling, and secure, repeatable delivery pipelines.

Tech Stack: Java 17 | Spring Boot | Spring Cloud | React.js | Docker | Kubernetes (EKS/ECS) | Terraform | AWS | Jenkins | Kafka | Redis | PostgreSQL | Prometheus | Grafana

Full Stack Java Developer | North Dallas Bank and Trust, Dallas, TX

March 2021 - October 2022

- Designed and developed customer-facing banking web applications using Java 11, Spring Boot, and React.js, improving responsiveness and customer satisfaction across online services.
- Engineered RESTful APIs to connect internal banking systems with third-party payment gateways, ensuring secure, reliable, and PCI-DSS-compliant transaction processing.
- Implemented a microservices architecture with Spring Cloud and Netflix OSS, enabling modular development, better fault isolation, and simplified scaling across service components.
- Deployed and maintained applications on AWS (EC2, S3, RDS, Lambda), optimizing deployment time and production scalability for high-traffic workloads.
- Configured secure access controls using AWS IAM, VPCs, and Security Groups, aligning infrastructure design with internal IT and compliance policies.
- Developed dynamic front-end interfaces using React.js and Redux, improving UI responsiveness and achieving a smoother user experience for customer transactions.
- Built automated testing frameworks with JUnit and Mockito for unit and integration testing, maintaining high code reliability and ensuring regression-free releases.
- Optimized SQL queries and stored procedures in PostgreSQL and Oracle, reducing data retrieval latency by up to 30%.
- Established CI/CD pipelines using Jenkins and Maven to automate build, test, and deployment workflows, and collaborated in system design reviews to ensure secure, compliant delivery across environments.

Tech Stack: Java 11 | Spring Boot | Spring Cloud | React.js | Docker | Kubernetes | AWS | Jenkins | Maven | PostgreSQL | Oracle | Kafka | Git | Agile/Scrum

Full Stack Java Developer | Comerica Bank, Dallas, TX

Aug 2019 - Feb 2021

- Developed and maintained mission-critical banking modules (payments, account management, onboarding) using Java 11, Spring Boot, and Hibernate, ensuring reliability for high-volume, secure transactions.
- Refactored legacy monolithic applications into modular Spring Boot microservices, enabling faster deployments, independent scaling, and improved fault isolation.
- Built secure RESTful APIs with Spring Security, OAuth 2.0, and JWT, implementing multi-factor authentication and role-based access control to meet internal and regulatory standards.
- Integrated Apache Kafka for asynchronous communication between services, supporting event-driven processing and improving system resilience under peak transaction loads.
- Developed React.js and TypeScript front-end dashboards with Redux for state management, providing real-time transaction insights and loan processing analytics for internal teams.
- Optimized PL/SQL stored procedures and indexing strategies in Oracle, reducing query latency by 30% and improving transaction throughput.

- Automated CI/CD pipelines using Jenkins, Maven, and Docker, enabling zero-downtime deployments and consistent artifact management via Nexus repositories.
- Enhanced performance and scalability by implementing Ehcache for caching and asynchronous data loaders, cutting response times by 20%.
- Conducted automated testing with JUnit, Mockito, and Postman, validating API contracts and maintaining regression stability across microservices.

Tech Stack: Java 11 | Spring Boot | Spring Security | OAuth 2.0 | Docker | Jenkins | Kafka | React.js | TypeScript | Oracle | Ehcache | Postman | Maven | Agile/Scrum

Java Developer | Rhone Apparel, Stamford, Connecticut

September 2018- August 2019

- Designed and implemented a microservice-based architecture deployed on AWS EC2 and Elastic Beanstalk, improving scalability and deployment speed by 30%.
- Integrated MySQL databases with Hibernate/JPA, optimizing entity relationships and query performance for efficient data retrieval across product and order services.
- Implemented authentication and authorization using Spring Security and JWT tokens, securing both customer-facing and administrative APIs.
- Built asynchronous workflows for order processing and notifications using RabbitMQ and Spring Cloud Stream, enhancing throughput and reducing latency in the fulfillment pipeline.
- Collaborated with front-end teams using React and Angular, providing CORS-enabled REST endpoints and API documentation with Swagger 2.0 for seamless integration.
- Implemented CI/CD pipelines using Maven, Git, and Jenkins with automated testing (JUnit 4, Mockito), achieving 85%+ code coverage and consistent release reliability.
- Implemented performance monitoring using the ELK Stack (Elasticsearch, Logstash, Kibana) and New Relic, enabling early detection of API bottlenecks and system errors.

Tech Stack: Java 8 | Spring Boot | Hibernate | MySQL | RabbitMQ | AWS | Elastic Beanstalk | React.js | Angular | Swagger | ELK Stack | Jenkins | Git | New Relic

EDUCATION

Master of Science in Computer Science — Maharishi International University, Iowa, USA (Expected Dec 2026)

Bachelor of Science in Information Technology — University of Technology Sydney, Australia (Jul 2017)

CERTIFICATION

[Google Cloud Cybersecurity Certificate \(09/2025\)](#)

[CompTIA Security+ \(01/2024\)](#)

[ISC2 Certified in Cybersecurity \(04/2025\)](#)

[TryHackMe SAL1 – Security Analyst Level 1 \(2025\)](#)

[Oracle Cloud Infrastructure MultiCloud Architect Professional](#)

[Oracle Cloud Infrastructure Certified Architect Associate](#)
