

Prathyusha Akula

510 Chippawa St, Windsor, ON, N9C 2W3

+1 226-946-5864

prathyusha.ak.8065@gmail.com

PROFILE SUMMARY

- Around 6 years of experience in planning, designing, developing and testing complex software applications
- Strong experience in developing features using **JavaScript, Type Script, HTML, CSS, PHP, RESTAPI, Maria DB, My SQL, MongoDB**
- Strong command on modern **JavaScript, ES5, ES6, Node.js, React.js**
- Developed several **Restful Webservices** using server-side **Node.js, Express.js** and gathered expertise in **Node.js**
- Experienced in **MERN** stack development **MongoDB, Express, React and Node.js**
- Experience in developing web applications using **React.js, Angular4, Angular.js, JavaScript, AJAX, JSON, Bootstrap, HTML4/5, CSS2/3, jQuery**
- Worked on developing common utility packages using **Python, JavaScript**
- Expertise in **React.js** framework to develop the **SPA**
- Proficient in using **React.js** with libraries like **Redux, Redux-Saga, Axios** and **React Router**
- Used **React-Router** to turn application into Single Page Application
- Experience in applications using **AJAX, Object Oriented (OO) JavaScript** and **JSON**
- Contributed to the development of various **SATS** keywords that can be used across various projects
- Exposure in working with **Kubernetes** and **Docker** to implement **CI/CD**
- Designed, developed, and executed various test **automation scripts** using **Robot Framework**
- Expertise in requirement gathering, quality assurance plan and design documents
- Adaptive and capable of working under strict time lines and situations
- Collaborated across teams for various tasks which involved earning and adapting cross functional skills, deliver the projects on time and also improving teambuilding, time management skills

TECHNICALSKILLS

- **Programming Languages:** JavaScript, TypeScript, ReactJS, Node.js, Express.js, Python, PHP, HTML, CSS, VBScript, Shell Scripting, Unix
- **Database Systems:** MySQL, MongoDB, PostgreSQL
- **Testing Frameworks:** Robot framework, Mocha
- **SDLC Methodologies:** Agile-Scrum, Waterfall
- **Tools:** Git, Bitbucket, Postman, Jenkins, Kubernetes, Citrix Virtual Machines
- **Project management tools:** Jira, Qtest, Confluence
- **Operating Systems:** Windows, Unix/Linux, Ubuntu

EDUCATION

Master of Applied Computing University of Windsor, Windsor, ON	Jan 2021 – Sep 2022
--	---------------------

Bachelor of Computer Science and Engineering Vardaman College of Engineering, Telangana, India	Sep 2014 – Jun 2018
--	---------------------

ADDITIONALINFORMATION

Certifications:

- | | |
|---|----------|
| • Learning Hadoop , Linked-in learning | Jun 2021 |
| • MongoDB certificate , Linked-in learning | Apr 2021 |
| • Java-Testing with Junit , Linked-in learning | Mar 2021 |

Other:

- | | |
|--|----------|
| • Participated in “ Lowes Tech Hackathon ” | Apr 2020 |
| • Speaker at “ Grace Hopper conference-2019 ” | Nov 2019 |

WORKEXPERIANCE

Full stack developer
The Brick, Toronto, ON

July 2024-Till date

- Involved in requirements gathering and analysis of from the client
- Developed web application using **HTML, XML, CSS, SASS, JSON, JavaScript, jQuery, and Angular.js**
- Performed **DOM** manipulation using **JavaScript, jQuery and Angular.js**
- Developed mockups and prototypes using **HTML and CSS**
- Strong command of backend languages such as Python, Node.js for scalable application development.
- Skilled in building and maintaining RESTful and GraphQL APIs to facilitate seamless data exchange between frontend and backend
- Involved in developing the **Angular.js MVC** framework for a Single Page Application
- Developed Bill generation and Plan management modules using **Angular.js**
- Used **Angular.js** features such as data binding, ng-route for routing, custom filters and custom directives to meet business requirements
- Worked on **Angular.js** Controllers, Filters, Services, Templates, Events and Injectors
- Developed a standalone Micro service using **Spring boot** microservice architectural patterns
- Used **Bootstrap** components of Angular-UI like carousel, collapse, dropdown to develop a dynamic responsive Web Application
- Created **controllers** and view pages along with **Bootstrap** and **HTML5** for dynamic web application
- Used **Less.js** pre-processor to create importable and reusable style sheets, processed on server-side.
- Built prototype for various required services such as Scheduling, Logging and Notification Service using third party **Node.js** based JavaScript library
- Used **Express.js** which is fast, assertive, essential and moderate web framework of Node.js that helps manage a sever and routes
- Used **AJAX** and **JSON** to make asynchronous calls to the application server to fetch data on the fly
- Worked with **NoSQL** database **MongoDB** and worked with it to perform many different operations
- Performed Smoke and Acceptance Testing with **Selenium**
- Designed and implemented scalable, secure cloud architecture based on Amazon Web Services (**AWS**)
- Involved in configuring **AWS EC2** instances, **S3** Buckets and Cloud Formation Services based on the business requirements

Environment: HTML, XML, CSS, SASS, JSON, JavaScript, jQuery, Angular.js, Bootstrap, Node.js, RESTFUL Web services, AJAX, JSON, Node.js, Express.js, AWS, Restful API, jQuery, Angular.js, NPM, GitHub, NoSQL, MongoDB

React Full-stack developer
Nokia, Ottawa, ON, Canada

Dec 2022 – Jun 2024

Responsibilities:

- Involved in all the phases of the Software Development Life Cycle (**SDLC**) including Requirements gathering, Designing, Programming, Testing, and Documentation of various projects.
- UI development with technologies like **JavaScript, ReactJS, Angular10+, TypeScript, jQuery, Redux and ES6**
- Experienced in dealing with various kinds of data structures with **Java Script** and **JSX**
- Created React components in multiple projects to implement various elements in **React app**
- Used **React** component life cycle methods to define initial state and call functions to load data from **back-end**.
- Designed React routers to allow users able to switch different pages while entering their URLs
- Experienced in **React-Redux** to create store for data and monitored them by creating actions in **Redux**
- Applied Java Script to implement reducers to set state and actions in **React-Redux** and add middleware in **Redux** store
- Developed UI using React hooks functional components, **React-Redux, React-Router, Redux-Sagas, Material-UI components**
- Displayed thousands of commercial agriculture products via scroll baron **UI using react-window** without Compromising performance
- Combined reducers to make them able to be dispatched from one action creator in **React-Redux**
- Implemented and enhanced various **front-end** features for a web application using **YANG** and **schema forms**

- Participated in various debugging sessions with various development teams
- Designed and implemented network solutions using Java Script and Python
- Developed RESTful API's using **Node.js**, **Express.js** that can be consumed by UI
- Used **Github** and **Git** for version controlling
- Deployed **Docker** containers on server nodes with master node using **Kubernetes** by creating pods and managing on the cluster environment on **Kubernetes**
- Configuring the **Docker** containers and created **Docker** files for various environments
- Experienced in debugging and working with **Kubernetes pods** by gathering required logs and analyzing them
- Implemented and developed various generic **SATS** keywords that can be used commonly across tests for various projects using **Python**
- Developed and executed test automation scripts using **Robot Framework**
- Also used **Mocha framework** for testing
- Comfortable in working with the router configurations and **CLI's**
- Collaborated across teams in various trouble shooting, development and testing activities
- Compiled and documented the Network Procedures and **Postman** collections

Environment: JavaScript, ReactJS, Node.js, Express.js, Restful API, React-redux, JSX, Python, YANG, Robot Framework, Mocha, Kubernetes, Postman, Git, Jira

Full-stack Developer
Nokia, Ottawa, ON, Canada

Jan 2022 – Sep 2022

Responsibilities:

- Developed new features for the 'Network Endpoint Security' application that detect malware in the network using **JavaScript**, **PHP**, **HTML**, **CSS** in an **agile** methodology
- Working knowledge of developing UI pages from Scratch using **HTML5**, **CSS3**, **JavaScript**, **Angular**, **Angular Material**, **React JS**, **Vue.js**, **Ajax**, **Webpack**, and **jQuery**.
- Build Web Apps with **ReactJS** and **Flux**. Structured the **JavaScript** code using **Angular10+** and **Angular Material**
- Strong working knowledge in developing **Restful** webservices and **Micro Services** using **Golang**
- Experience in building isomorphic applications using **ReactJS** and **Redux with GraphQL** and **Node.js** on the server side
- Involved in developing and implementing Back-end web application using **Node.js** and **PHP**
- Created detailed **AWS** Security Groups, which behaved as virtual fire walls that controlled the traffic and allowed to reach one or more **AWS EC2** instances and deployed applications on AWS by using Elastic Beanstalk
- Extensively worked on the **CI/CD** tools such as **Jenkins**, **Git**, **Gradle**, and **Maven** and created work flows in Jenkins
- Trouble shooting any operational issues in the **CI/CD** pipeline
- Relevant experience in web application using **PHP- Symfony2**, **Laravel**, **CakePHP** and **Zend**
- Analyzed and developed **test scripts** to test and trouble shoot the application features
- Experience with Test Driven Development using **PHP Unit**, **Simple Test** and **Codeception**
- Built data visualizations to monitor the server load, web server speed, data processing, and more using **D3JS**, **Backbone** and **jQuery**
- Experience in working with **GraphQL** queries and using the Apollo **GraphQL** library
- Worked in a **Kubernetes** environment mostly on deploying **Kubernetes clusters**, containers.
- Exposure to continuous integration pipe-lines using **Jenkins**

Environment: JavaScript, Angular Material, React, Redux, Vue.js, Ajax, Webpack, jQuery, PHP, HTML, CSS, MySQL, MariaDB, Kubernetes, Jenkins, Git, Jira, AWS

Full-stack developer
Lowes Services India Pvt Ltd., Bangalore, India

Aug 2018 – Mar 2021

Responsibilities:

- Used **React.js** for client-side view rendering services, typically used various predefined **Redux libraries**
- Configured **React-Redux** for state management and **React-Router** for programmatic navigation
- Implemented Store-Redux for holding the whole state tree of application and Reducer-Redux for describing actions
- Used **AJAX** to request data from back-end based on user interface input and post updated data to backend

- Used **Web pack module bundler** accompanying **React.js**
- Implemented Spring Boot to create **CRUD** operations in the backend for our React-frontend application
- Implemented **JSON** web tokens for authentication and authorization security configurations using **Node.js** and integrated **Node.js** with **Express.js** to communicate with database for CRUD operations on the data repository
- Developed the web application based on the **Node.js** microservices architecture using Express and MongoDB
- Extensive experience in designing **MongoDB** multi-shared cluster and monitoring with MMS
- Created **Docker images** from **Docker file** and handled multiple images by storing them in containers to deploy
- Written Kubernetes deployment and service files for the Docker images
- Deployed docker containers on server nodes with master node using Kubernetes by **creating pods** and **managing the cluster environment on Kubernetes**
- Used Junit along with **Mockito** to perform unit testing for a **RESTful** web application
- Used **Gradle build tool** to deploy the application on the web servers i.e. **JBoss**
- Worked with **Jenkins** Continuous Integration and Continuous Deployment (**CI/CD**)
- Engineered **Splunk** to build, configure and maintain heterogeneous environments and in-depth
- Knowledge of log analysis generated by various systems including security products and worked on setup of various dashboards, reports and alerts in **Splunk**
- Employed the **Single Sign On (SSO)** authentication using Site Minder for logging to the application from Different websites
- Used Azure Resource Manager (ARM) to deploy, update, or delete all the resources in a single, coordinated operation
- Defined set of resources and specifying deployment parameters to **Azure Resource Manager (ARM)** templates to create resource group for Dev/QA/UAT/Prod environments
- Used **Azure Functions** to integrate applications and run backend processes according to schedules without provisioning/managing servers
- Worked with **Terraform Templates** to automate the **Azure Iaas virtual machines using terraform** modules And deployed **virtual machine** scale sets in production environments

Environment: React JS, Node.js, Express.js, HTML5, CSS3-SASS and LESS, AJAX, Angular 5.0, Single Sign On (SSO), Microsoft Azure, Logic Apps, Storage Accounts, MongoDB3.5, Maven, JIRA, Micro Services, Bitbucket, Jenkins
