SUMMARY

Java Developer with 4 years of experience, I've worked on building and maintaining scalable backend systems using Java, Spring Boot, and Hibernate. I specialize in developing RESTful APIs and integrating cloud solutions with AWS and GCP, which has helped improve system performance and streamline data flow. My focus is always on optimizing processes and delivering high-quality solutions, even under tight deadlines. I'm excited to bring my Java development skills to a team where I can continue to innovate and help drive success in a fast-paced environment.

SKILLS

Methodology: SDLC, Agile, Waterfall, Object Oriented Programming

Programming Languages: Java, Kotlin, Python, C++, PL/SQL

Frameworks: Spring Boot, ReactJs, AngularJs, .Net, , Flask, Django, RxJs

Web Technologies: HTML, CSS, JavaScript, GraphQL, TypeScript, jQuery, Bootstrap

Databases: Oracle, MySQL, PostgreSQL, MongoDB

Version Control & Other Tools: Git, Gitlab, Bit Bucket, Maven, Gradle, Apache Kafka

Cloud Platforms and DevOps: AWS, Docker, Jenkins, Kubernetes

IDES: IntelliJ IDEA, Eclipse, Visual Studio Code

Testing and Logging Tools: Junit, Mockito, Selenium, TestNG, Log4J, Splunk

Operating System: Windows, Linux, Mac

EXPERIENCE

MoneyGram, TX

Jan 2024 - Present

Java Developer

- Contributed to the development and implementation of product eligibility calculations for **Default Loan Services** using **Java** and **Spring Boot**, improving the accuracy of loan recommendations based on customer financial profiles and tailoring solutions more effectively.
- Reconstructed a cloud architecture for the data retention workflow, optimizing **AWS SQS (Simple Queue Service)** processing times, which resulted in an **80% reduction** in messages stuck in the dead letter queue and improved cold start performance.
- Developed responsive frontend interfaces using **React.js**, **TypeScript**, and **Redux**, enabling underwriters to dynamically modify product configurations, improving user experience and boosting team productivity.
- Migrated a legacy application to **Java**, streamlining the configuration of eligibility calculations and simplifying the process of configuring default products more efficiently.
- Integrated **Amplitude** into frontend applications to track user sessions and interactions, allowing for quicker identification of issues by recording user actions (clicks, triggered actions) and providing actionable insights into user flow, making troubleshooting more efficient.
- Worked with **JavaFX** and **Spring Boot** to build dynamic, interactive web applications, leveraging **Java** on the server-side for seamless data handling, improving responsiveness and efficiency across the platform.
- Enhanced database performance through **Hibernate** and **JPA** with **SQL Server** and **MySQL**, optimizing queries and reducing latency in high-traffic workflows.
- Implemented **role-based access control (RBAC)** and secure authentication using **JWT** and **OAuth2** in **Spring Security**, ensuring robust data protection across microservices and sensitive workflows.
- Maintained high-quality code by developing comprehensive unit and integration tests using **JUnit**, **Mockito**, and **TestNG**, ensuring early detection and resolution of issues in the development cycle.
- Led the adoption of cloud-native infrastructure with **AWS (Lambda, S3, ECS)**, automating **95% of deployment pipelines** via **Jenkins** and **GitHub Actions**, reducing manual overhead and improving deployment efficiency.

Infosys Limited, India

Java Developer

Jan 2021 - Jan 2023

- Designed and implemented event-driven modules in **Java** for card member selection, building targeted systems that aligned with business requirements and presented real-time results to clients.
- Reduced database calls by designing stored procedures to execute and extract information from the database.
- Enhanced event processing efficiency by **30%** by implementing multithreaded file parsing and task scheduling in **Java** using **Quartz scheduler** and custom scheduling mechanisms, reducing overall processing time by **40%**.
- Developed a user-friendly **JavaFX** and **Swing** interface for credit evaluation, improving the efficiency of FICO score updates and providing seamless interactions for end-users.
- Utilized **Java Stream API** to pipeline data modifications, transforming large datasets efficiently and applying complex transformations, filters, and aggregations, improving data processing speed by **35%**.
- Collaborated with stakeholders to translate business needs into **Java** application features, ensuring accurate credit transfer logic and alignment with regulatory compliance requirements.
- Migrated legacy **SOAP-based integrations** to modern **RESTful APIs** using **Spring Boot** and **JAX-RS**, improving performance, reducing overhead, and ensuring smooth system interoperability across platforms.
- Developed responsive dashboards with **JavaFX** and **Swing**, integrating them with **Spring Boot** REST APIs to visualize real-time credit evaluation data and enhance client-facing reporting capabilities.
- Managed SQL databases by building optimized query execution layers in **Java** using **JPA**, **Hibernate**, **Spring Data**, and **LINQ**, ensuring **99% data accuracy** in financial transactions and enhancing the performance of complex queries.

EDUCATION

Wayne State University

Jan 2023 - Dec 2024

MS, Computer Science

• **GPA:** 3.87/4.00

Dr. Ambedkar Institute of Technology

Aug 2016 – Aug 2020

B.E, Engineering

• **GPA:** 3.98/4.00

PROJECTS

The General AI-Chatbot | Python, OpenAI, Streamlit, ChromaDB

- Proposed and spearheaded the development of "The General," an AI-powered chatbot designed to identify potential causes of production issues by analyzing deployment information, user stories, pull requests, and ServiceNow change requests.
- Successfully delivered a functional prototype within a week during Hackweek and showcased 25% reduction in manual interventions in identifying the push related to the prod issues. Organized team meetings, realigned priorities, and assigned actionable tasks to ensure efficient collaboration.
- Enabled the successful delivery of a production-ready tool, with plans for internal deployment to enhance operational workflows and issue resolution efficiency.

Face Recognition as a Service | AWS, EC2, Python, JavaScript

- Developed an attendance system using facial recognition to automate the process, enhancing operational efficiency and accuracy in tracking employee presence ensuring a seamless user experience and efficient data handling.
- Leveraged AWS EC2 to enhance the facial recognition-based attendance system, achieving scalable and dependable real-time tracking tailored to various organizational requirements.

Wood Wizard | Java, MySQL, HTTP Servlets, JSP

- Developed a Java-based web application using JSP, MySQL, and Apache Tomcat, streamlining the tree removal request process and improving service delivery speed by 30%.
- Implemented role-based access control, allowing users to submit detailed requests with images and location data, reducing request ambiguity by 40%.

Care Pro | React, Node.js, Express, MongoDB, JWT, Redux, Material-UI

- A comprehensive healthcare management web application designed to streamline clinic operations and enhance patient care. Developed with modern web technologies, Care Pro enables efficient appointment scheduling, patient record management, and staff coordination.
- Optimized user experience through intuitive dashboards for healthcare professionals, resulting in a 20% increase in task completion speed and a 15% reduction in operational errors.
