

RAMYASRI PUNETI

Full Stack Java Developer

📍 New Jersey, USA 📞 +1 (901) 801-0952 ✉️ ramyasripuneti44@gmail.com 🔗 LinkedIn

SUMMARY

Full Stack Java Developer with 5+ years of experience building scalable, cloud-native applications across banking, healthcare, and hospitality domains. Proficient in Java 17, Spring Boot, Microservices, React, Angular, and AWS to design and deliver high-performance web solutions. Skilled in developing RESTful APIs, automating CI/CD pipelines, and deploying containerized applications using Docker and Kubernetes. Experienced in Agile/Scrum collaboration, cross-functional problem-solving, and optimizing application performance and security. Passionate about applying Generative AI and data-driven solutions to enhance user experience, automate workflows, and deliver measurable business impact.

TECHNICAL SKILLS

Programming Languages

Java 17, J2EE

APIs & Integrations

RESTful APIs, GraphQL, gRPC, SOAP, OpenAPI (Swagger), Postman

Build & DevOps Tools

Maven, Gradle, Jenkins, GitHub Actions, SonarQube

Development Practices

Agile (Scrum), CI/CD Pipelines, Test-Driven Development (TDD), Cloud-Native Development

Frameworks & Libraries

Spring Boot 3.x, Spring Cloud, Spring Security, Hibernate, Angular, React

Databases & Persistence

PostgreSQL, Oracle, MySQL, MongoDB, Redis

Testing Frameworks

JUnit 5, Mockito, Selenium, Cucumber (BDD)

Frontend Technologies

HTML5, CSS3, TypeScript, JavaScript, Bootstrap 5, jQuery, Node.js

Cloud & Microservices

AWS (ECS, Lambda, CloudWatch, EC2, S3, RDS, Elastic Beanstalk), Docker, Kubernetes, Apache Kafka, ActiveMQ, Terraform, Helm, Spring Cloud, OpenTelemetry

Security & Authentication

OAuth 2.0, JWT, OpenID Connect

PROFESSIONAL EXPERIENCE

Full Stack Java Developer, TD Bank

Apr 2024 – Present | USA

- Architected and created scalable Spring Boot microservices and RESTful APIs, processing over 120K financial transactions daily and improving overall system scalability and response time by 35%.
- Enhanced the data persistence layer using Hibernate ORM and refined PostgreSQL queries, significantly boosting backend performance and reliability for large-scale financial datasets.
- Implemented robust security protocols with OAuth 2.0 and JWT-based authentication, ensuring secure and role-based access control across multiple banking modules and services.
- Orchestrated AWS Lambda functions and Dockerized services into automated CI/CD pipelines, streamlining deployment processes and reducing release cycles by 40% while enhancing operational efficiency.
- Constructed dynamic React.js components for internal banking dashboards, improving user interactivity, data visualization, and customer service resolution time by 25%.

Full Stack Java Developer, Hilton

Sep 2023 – Mar 2024 | USA

- Engineered and deployed Spring Boot REST APIs supporting guest management and booking workflows, streamlining data flow across hospitality systems and improving processing efficiency by 30%.
- Implemented AWS-based infrastructure using EC2, S3, and RDS with automated scaling and monitoring via CloudWatch, ensuring high availability and reliability during peak booking periods.
- Built and optimized Angular 14 front-end interfaces connected to microservices, enhancing user experience, responsiveness, and engagement for both customers and hotel staff.

Java Developer, Cognizant

Jul 2021 – Aug 2023 | India

- Built and maintained Spring Boot and Spring Cloud microservices supporting modular deployment, high fault tolerance, and seamless scaling across distributed enterprise systems.
- Implemented event-driven architectures leveraging Apache Kafka and ActiveMQ, processing 50K+ asynchronous messages per day to ensure real-time synchronization, data consistency, and high system resilience under heavy transaction loads.
- Optimized MySQL and Oracle databases through advanced indexing, caching strategies, and schema tuning, improving data retrieval speed by 30% and significantly enhancing backend performance and application responsiveness.
- Applied Test-Driven Development (TDD) methodologies using JUnit 5 and Mockito, strengthening code reliability, improving test coverage, and reducing regression defects by 25% through continuous validation and automation.
- Engineered RESTful APIs integrated with React.js dashboards, enabling seamless backend-frontend data exchange for 200+ concurrent users and enhancing real-time accessibility and visualization for business teams.
- Automated build and deployment pipelines with Maven, Jenkins, and GitHub Actions, streamlining integrations, accelerating releases, and ensuring consistent environments across development, staging, and production.

Java Developer, HSBC

Apr 2020 – Jun 2021 | India

- Designed and delivered enterprise-grade web applications with Spring MVC and RESTful APIs, streamlining financial workflows and improving operational efficiency across integrated banking modules.
- Developed and optimized backend modules leveraging Spring Boot, Hibernate, and MySQL, improving query execution speed and reducing database response time by 28% for high-volume, data-intensive banking applications.
- Architected and supported SOAP and REST APIs using JAX-RS and JAX-WS, ensuring seamless interoperability between legacy enterprise systems and newly developed microservices-based architectures.
- Deployed and managed applications on AWS EC2 and Elastic Beanstalk, integrating Amazon S3 for secure file storage and automating infrastructure provisioning to reduce deployment time by 20% and enhance release reliability.
- Engineered and enhanced dynamic front-end interfaces using Angular, Bootstrap, and JavaScript, improving usability, responsiveness, and overall client satisfaction scores by 20% across internal and customer-facing applications.

EDUCATION

Master of Science – Data Science,
University of Memphis

Aug 2023 – May 2025 | USA

Bachelor of Engineering – Electronics and Communication Engineering,
Anna University, Chennai

Sep 2017 – May 2021 | India

PROJECTS

IntelliBank – AI-Driven Transaction Analytics System

Technologies: Spring Boot, React.js, AWS Lambda, OpenAI API, PostgreSQL, LangChain

- Designed and developed an AI-powered financial analytics platform using OpenAI API and LangChain to detect anomalies, analyze spending trends, and generate personalized summaries for retail banking customers.
- Delivered Spring Boot microservices to process over 100K+ financial transactions daily, integrated with interactive React.js dashboards for real-time insights and visualization.
- Deployed serverless pipelines on AWS Lambda via Terraform, cutting infrastructure overhead and operational costs by 40%.
- Enhanced customer engagement by integrating LLM-driven recommendations, enabling proactive insights, behavioral pattern detection, and personalized financial guidance.

SmartStay – AI-Powered Hospitality Recommendation Platform

Technologies: Angular 14, Spring Boot, Python, AWS, MongoDB, OpenAI API

- Created a Generative AI-based recommendation engine using OpenAI embeddings and Python scripts to suggest room upgrades, dynamic pricing, and personalized offers.
- Built RESTful Spring Boot APIs and Angular front-end modules for guest booking and property management, seamlessly integrated with AWS EC2 and MongoDB Atlas.
- Orchestrated JWT-secured microservices for authentication and personalized workflows across distributed services.
- Improved retention and upselling by 18% through AI-driven personalization and contextual recommendations.

CERTIFICATIONS

AWS Certified Solutions Architect — Associate

Oracle Certified Professional: Java SE 17 Developer
