

Rajesh Movva

510 362 1236, rajeshmovva45@gmail.com

Profile Summary:

- Around 6 years of experience in analysis, design, development, implementation, and maintenance of applications using modern Java technologies such as Core Java, J2EE, Spring Boot, Spring MVC, Spring Data JPA, RESTful APIs, multi-threading, and Hibernate, with a strong understanding of SDLC concepts.
- Hands-on experience on **AWS Lambda, IOT, S3, Cognito, SNS, SQS, SES, CloudWatch**, and CodeCommit.
- Extensive experience in building Microservice and Event-Driven architecture applications using Spring Boot and REST APIs.
- Expertise in Data Structures, Design Patterns, SOLID principles, and both Object-oriented and Aspect-oriented development.
- Expertise with using **Oracle, SQL Server, MySQL** databases and writing SQL and PL/SQL queries.
- Experience in using Web/Application servers like **WebLogic, JBoss, Glassfish** and **Tomcat**.
- Well experienced in functional and technical systems analysis & design, system architectural design, presentation, process interfaces design, process flow design, and system impact analysis and design documentation and presentation.
- Experience in working on **MVC** pattern using AngularJS, creating user interface and single page web application.
- Experience in **JVM Performance Tuning**: Garbage Collector and Heap Analysis, Thread dumps, Heap dumps, Memory Leaks, Connection Leaks, Core Dump, Profiling, Refactoring.
- Experienced in complex data modeling using NOSQL databases MongoDB, Cassandra, Neo4J, and relational databases like MySQL, PostgreSQL, Oracle, and in-memory databases like Redis and H2 DB.
- Proficient in Java Profilers like **VisualVM, Eclipse Memory Analyzer**, and Spring Actuator for fixing memory leaks.
- Proven experience in developing multi-threaded applications using the Java Concurrency framework.
- Experience in client-side scripting Technologies such as HTML, JavaScript, CSS, jQuery, and Angular.
- Implemented Single Sign-On (**SSO**) using **OKTA** and **SAML** protocols.
- Experience with container orchestration systems such as **AWS EKS** or Kubernetes.
- Expertise in the Angular framework and its ability to create simple and scalable code for SPA.
- Experienced in testing Angular applications using Jasmine and Karma.
- Expertise in **JUNIT** testing using Junit 5, Mockito, PowerMockito, Cucumber, and integration testing.
- Proficient in all phases of the Software Development Life Cycle (SDLC) including Requirements gathering, Analysis, Design, Reviews, Coding, Unit, and Integration Testing.
- Excellent work ethics, analytical, and problem-solving skills.

Technical Skills

- **Languages**: Java, Python
- **Frameworks**: Spring Boot 3, Spring Cloud Data Flow, Spring Data, Spring MVC, Spring Security, Spring Batch, Spring WebFlux, Spring AOP, Spring JDBC, Hibernate, Node.JS, Quartz Scheduler, Spring Thymeleaf, Spring Actuator, Grafana, Swagger
- **Databases**: MongoDB, MySQL, PostgreSQL, Oracle, Cassandra, Neo4j, Redis, and H2
- **Security Layers**: SAML 2.0, SSO, AWS Cognito, Service Mesh, Apigee
- **JVM Profiling**: VisualVM, Eclipse Memory Analyzer
- **Messaging Queue**: Kafka, Rabbit MQ
- **AWS Services**: Lambda, S3, IAM, SES, SNS, SQS, Cognito, IOT (MQTT), CloudWatch, RDS, Secrets Manager
- **Client-Side Technologies**: Angular 12, HTML 5, CSS 3, JavaScript, Bootstrap
- **IDE Tools**: Eclipse, STS, IntelliJ, Visual Studio
- **Testing Tools**: JUnit 5, Mockito, TestNG, Sonar, Cucumber, JMeter, Maven

- **Container Orchestration:** Docker, Kubernetes, AWS ECS
- **Cloud Services:** AWS, Azure, GCP
- **Version Control:** Git, SVN

Professional Experience

Travelport, Denver, CO
Senior Software Engineer

Nov 2022 - Present

Responsibilities:

- Developed overall new layout of the new application.
- Involved in all the phases of the application changes - analysis, design, development, testing and deployment.
- Developed User Interface using the **HTML, Bootstrap, CSS, JavaScript, and AngularJS**.
- Used spring framework features like **Spring IOC, Spring AOP and Spring Batch**.
- Spring configuration files are created for dependency injection.
- Designed and deployed XML files for Dispatcher Servlets, Application Context and Controllers to implement the Inversion of Control (**IOC**) module in spring.
- Developing micro services in cloud environment.
- Created AWS S3buckets, performed folder management in each bucket, Managed cloud trail logs and objects within each bucket.
- Developed new user -facing features using **React.JS**.
- Used Cloud formation templates (**CFT**) to find the resources that needed for the formation of cloud formation stacks
- Used **NOSQL** database Amazon dynamo DB to store data of reporting Application.
- Used Amazon Cloud Watch to monitor **AWS** services and Amazon Cloud Watch logs to monitor application.
- Implemented Object-relation mapping in the persistence layer using hibernate (ORM) framework. Extensively used DAO patterns, including mapping DAO objects, configure file and classes to interact with database.
- Developing Web pages by using HTML5, CSS3 with LESS, Angular JS and Angular UI Bootstrap.
- Developed **Java API** to interact with the **Amazon SQS** used in sending bulk emails.
- Generated **JSON** format data packets from middle-tire controller to front-end using Jackson JSON API.
- Used **JSON** for data exchange between browser and server. Used **JSR353** for processing and manipulating **JSON** objects.
- Worked on AWS for storage & content delivery and application deployment services.
- Configured AWS Identity Access Management (IAM) Group and users for improved login authentication.
- Created RESTful API specifications with OpenAPI, defining endpoints, parameters, request/response, authentication, and managed the API lifecycle using Apigee.
- Established monitoring and logging with AWS **CloudWatch** for Lambda functions, API Gateway, and other services.
- Worked on Governance multi-approval hierarchy process, involved in redesigning APIs, modifying Angular components to support server-side pagination, searching, and sorting.
- Utilized Angular services to capture application metadata from the Governance service, optimizing onboarding and governance workflows.
- Used Jenkins for continuous integration (CI/CD) in which all development work is integrated and involved in deploying the application using Docker to AWS environment
- Modeled **JSON** data from database and coded request handlers for parsing and sending relevant data to client (browser) side.
- Developed web services using **JAX-WS** to interact with legacy applications (backend processes).
- Used **Apache SVN** for repository management and **Ant** for build management.
- Updated database scripts to accommodate changes due to UI overhaul (for both **Oracle** and **PostgreSQL**).
- Involved in writing SQL stored procedures on **Oracle** and **PostgreSQL**.
- Developed interactive web application using **Node.js** a pure java script application frame work.

- Integrated Node.js backend services with RESTful APIs to handle data processing and retrieval, ensuring seamless communication between the server and front-end applications.
- Selecting the appropriate **AWS** service based on compute, data, or security requirements.
- Integration of Amazon Web Services (AWS) with other applications infrastructure.
- Experience working with **Docker** to improve our (CD) Continuous Delivery framework to streamline releases
- Used **JIRA** for defect management and to keep track of bugs and issues.
- Built application using **MAVEN** and used **Log4J** to generate log files for the application.
- Extensively Implemented Spring Boot, dependency Injection (**DI**) and aspect-oriented programming (**AOP**) features along with hibernate.
- JUnit/Mockito Frameworks were used for performing unit & integration testing by writing test cases.
- Used Client side **MVC** frameworks like **Angular JS** Single Page Application developments.

Environment: Java/J2EE, Spring 3.2.5, Hibernate 4.0, Struts 2.3.3, EJB 3, Windows (development), RHEL 5 (deployment -JBoss), WebSphere 8, JBoss EAP 5, Bootstrap, Java Script, AngularJS, Node Js, Oracle 11g, PostgreSQL9, UML, SVN, AJAX, ExtJs 3.3, JSR 353, JNDI, JAX-WS, Ant, AWS (Amazon Dynamo DB, Amazon SQS, Amazon Cloud Watch, Amazon Lambda), Agile Scrum.

TCS, India
Full Stack Developer

May 2021 – July 2022

Responsibilities:

- Involved in the full lifecycle of software design process of other projects, including prototyping, proof of concepts, design, interface implementation, testing and maintenance.
- Involved in the agile process, Sprints, and daily Scrums to discuss the development of the application.
- Involved in the extensive usage of HTML/HTML5, CSS, JQuery, JavaScript, and Ajax for client-side development and validations.
- Designed and developed a new microservice from inception to deployment, focusing on the Air Compliance module.
- Engineered an event-driven notification service to deliver real-time notifications to users by consuming Kafka messages generated by ETL jobs.
- Worked on AWS Code Deploy to trigger various AWS lambda instances and test various components of the application.
- Configured the Spring framework for entire business logic layer
- Interacted with java controllers (jQuery, Ajax, and JSON to write/read data from backend systems).
- Created Statistical Reports in Jasper using XLS sheet as Data Source and Decision reports for viewing the data using MySQL database as data source.
- Developed the User Interface using Swing, UI components in JSP and HTML/HTML5.
- Utilized various jQuery plugins to build Rich Internet Application (RIA) to make it look more intuitive.
- Database schema design development and coding of DDL and DML statements, functions. Extensive Knowledge of database like Oracle, designing the database and coding of SQL, PL/SQL, Triggers, and Views.
- Developed programs for accessing the database using JDBC thin driver to execute queries, prepared statements, Stored Procedures and to manipulate the data in the database.
- Bug fixes for the issues observed in the stage environment, involved in database design and creation.
- Used Firebug for application webpage troubleshooting and Eclipse debugger for the bug fixes.
- Maintained, enhanced, and recommended solutions that best suit business and technology needs from UI standpoint.
- Leveraged AWS CloudFormation for infrastructure as code, ensuring consistent and repeatable deployments.
- Developed and integrated a Redis module for centralized static data management across multiple microservices.
- Established SSL certificates using AWS Certificate Manager for secure and reliable web traffic management
- Implemented seamless user authentication and authorization by integrating AWS Cognito into the application.

- Performance tuning of MongoDB queries and indexes to ensure optimal performance.
- Used Micro service architecture with Spring Boot for developing microservices which communicate using REST and Kafka.
- Implemented Angular reusable components to use it for displaying different module tabular data.

Environment: Java 8/11, Micro Services, Spring, Spring Boot, AWS, Lambda, Apache Kafka, MongoDB, Redis, Angular 12, HTML, CSS3, Typescript, JavaScript, REST, Spring WebFlux/AOP/Security/Transactions/Data JPA, Swagger, Mockito, H2, Docker, Kubernetes, Jenkins, SonarQube, JIRA, Maven, GitHub.

TrustHub, India
Full Stack Developer

Jan 2019 - April 2021

Responsibilities:

- Involved in driving efforts around all cycles of the project life cycle including planning, architecture, design, development, testing, and support.
- MongoDB data modeling for storing unstructured workflow data.
- Led the full lifecycle development of the Rights Management service module, taking ownership from inception to delivery.
- Developed responsive web pages for rights management service using Angular.
- Orchestrated Quartz scheduler jobs to automate various assessments and reports generation tasks.
- Designed MySQL schema and created the required tables, indexes, and constraints.
- Used Micro service architecture with Spring Boot for developing microservices.
- Designed and developed common utilities for JSON-Java Objects using Jackson Libraries.
- Implemented Authentication & Authorized Rest APIs with Spring Security.
- Designed and developed an Identity management solution with provision for SAML integration with an external Identity Provider.

Environment: Java 8, Micro Services, Spring Boot, MySQL, MongoDB, Neo4J, Redis, Angular 2.0, HTML, CSS3, Typescript, JavaScript, Docker, REST, Spring MVC/AOP/Security/Transactions/Data/Thymeleaf, Spring Batch, Swagger, SAML, Jenkins, Mockito, SonarQube, JIRA, Maven, GIT.

Education:

Masters in Computer Science USA
