

Rama Chaitanya Gollapudi

Education

- Bachelor of Technology (B.Tech.) from Jawaharlal Nehru Technological University Kakinada, India.

Summary of Qualifications

- 11+ years of professional experience in software development.
- Strong experience in designing and developing User Interface (UI) applications and micro front end applications using Angular 18, HTML5, CSS3, TypeScript, JavaScript, RxJs, and NgRx.
- Good working experience on J2EE, Java, Spring Framework, Spring Boot, Struts, JDBC, Log 4J, Web Services (JAX-WS, JAX-RS), SQL, PL/SQL, JMS, JSF, JSP, Maven, XML, FTL, Soap UI, Web Sphere, Apache Tomcat, Eclipse, STS, Oracle, SQL Server, SAP Crystal Reports.
- Good experience in designing android native screens using Android, Gradle build and Android Studio.
- Strong experience in designing and working with 3-tier architecture (UI, Business Logic Layer and Data Access Layer).
- Experience with Angular build tools like web pack and gulp for creating optimized production builds.
- Experience with Version Control Systems like Subversion (SVN), RTC and Bitbucket.
- Good experience in monitoring and scheduling batch jobs using workload automation tools like Control-M and Active Batch.
- Experience with automated UI testing tools like Jasmine, Karma, Protractor and worked in TDD environment.
- Experience in writing JUnit and android instrumentation test cases for android code base for Sonar Coverage.
- Expertise in debugging and troubleshooting code using Developer tools.
- Effective working both independently and as a team member and/or a team leader.
- Good understanding of the emerging technologies in mobility.
- Hands on experience on various methodologies like Agile, Scrum, Sprint, and Waterfall.
- Excellent Technical, Communication, Analytical and Logical skills coupled with self-confidence.
- Extensive involvement in all phases of development life cycle, which includes analysis, design, development testing and implementation.
- Good experience in both Development and Prod support.
- Received 'Spot Award' from Williams for designing and implementing automated bulk report migration between environments which drastically reduces time and minimizes human error And 'Champion Award' for designing and implementing the blue skies project.
- Received 'Star of the Leaner Group', 'On the Spot' and 'Star of the Quarter' awards from TCS for outstanding contribution to the organization.

Technical Experience

Languages & API	Java 8, J2EE, JDBC, Servlets, SQL, PL/SQL
Web Technologies	JavaScript, TypeScript, HTML5, CSS3, XML, FTL, Java Server Faces (JSF), Java Server Pages (JSP), AJAX, jQuery, Web Services (JAX-WS, JAX-RS), Unix Commands, SOAP, GraphQL
Frameworks	Angular, Android, Spring, Spring MVC, Spring Boot, Struts, Log4J, JUnit, JPA, Hibernate

Databases	Oracle, SQL Server
Application Servers	IBM Web sphere, Apache Tomcat
Web Servers	Apache Web Servers
Source Code Control	RTC, Clear Case, SVN, Bitbucket, GitHub
Operating System	Windows, Unix, Linux
Development and Build Tools	Eclipse, STS, Visual Studio, Android Studio, Putty, WinSCP, Soap UI, Maven, HP Quality center, Perfecto Mobile based cloud, Jenkins, Microsoft Azure, Protractor, Gradle, npm, Angular CLI, Git, JIRA, FileZilla, Postman, SQL Navigator, Nx, SQL Developer, Control – M and Active Batch workload automation, Crystal Reports

Professional Experience

SCHLUMBERGER - Front End Software Engineer

Nov 2022 – Mar 2025

1430 Enclave Pkwy, Houston, TX 77077

Description: The Schlumberger's Directional Drilling Advisor is an automated system that helps to facilitate the analytical tasks that traditional directional driller would take while steering and executing the well trajectory. This system monitors the environment, captures real time data from surface and downhole and determines the current and projected position of the wellbore. It supports motors and at bit rotary steerable systems regardless of tool size or hole size or bottom hole assembly type. The Directional Drilling Advisor is part of the Autonomous Directional Drilling program that provides Schlumberger customers with an autonomous directional drilling system that can drill all their wells regardless of the field, rig or trajectory in the most efficient and consistent manner possible.

Responsibilities:

- Develop program logic for micro front end applications, coding, testing, debugging, documenting, implementing, and maintaining software application.
- Developed interactive data visualizations using D3.js and SVG to render charts, including 2D plots and cylindrical views.
- Integrated Microsoft SignalR to stream and display real-time data, ensuring seamless live updates.
- Collaborate with business analysts, UX designer and cross functional teams to collect requirements and provide estimates.
- Partner with the project manager, team lead, and SME's to prioritize user stories and allocate them to front-end developers.
- Used Angular 18 and Angular material components in creating the application modules.
- Writing Jasmine unit tests using Karma to verify Angular modules and JavaScript utility routines.

Environment: Angular 18, TypeScript, HTML5, CSS3, SCSS, JavaScript, Visual Studio, Unix, Linux, Putty, WinSCP, Git, Microsoft Azure, RxJs, NgRx, Nx, Microsoft SignalR, D3.js, GeoToolkit, Cucumber-JS, Jasmine, Karm, Micro Frontends.

WILLIAMS WPC-I LLC - Full Stack Developer

 May 2019 – Nov 2022

 2800 Post Oak Blvd, Houston, TX 77056

Description: The Williams Companies, Inc. is an energy company, and its core business is natural gas processing and transportation. 1Line Portal is a commercial application which manages gas transportation. 1Line portal allows customers to monitor their contracts and transactions, transfer their allocation and nominations, keep track of their billing, update their contact details and many more functionalities in a secure way. Worked on Contract and Common Gas Accounting modules.

Responsibilities:

- Develop program logic for new applications, coding, testing, debugging, documenting, implementing, and maintaining software application.
- Remediate application system issues through appropriate trouble shooting, incident, change and problem management standards using Ticket Management system.
- Use best practices and knowledge of internal/external business issues to improve products, services, and processes.
- Provide application software development services or technical support.
- Work with the defined business and technical requirements to deliver software solutions.
- Develop UI layouts and front-end screens for web application.
- Conversion of legacy web application to newly redesign pages using Angular and Micro Services and at the same time supporting legacy application for bug fixes and enhancements.
- Work in the Agile development environment with frequently changing requirements and actively participated in Scrum meetings and review.
- Used Angular 8 and Angular material components in creating the application modules.
- Writing Jasmine unit tests using Karma to verify Angular modules and JavaScript utility routines.
- Used Gulp and web pack for creating production ready builds.
- Monitor and schedule the batch jobs using Control-M and Active Batch workload automation tools.
- Design and create internal and external reports using SAP Crystal Reports tool.

Environment: Java, Angular 8, JSF, Spring Boot, SQL, TypeScript, HTML5, CSS3, SCSS, jQuery, JavaScript, SQL Developer, Eclipse, Visual Studio, Spring Tool Suite, Soap UI, Hudson, Unix, Linux, Maven, Gradle, Putty, WinSCP, Bitbucket, Git, JIRA, Jenkins, Microsoft Azure, Control-M and Active Batch workload automation, Crystal Reports.

TATA CONSULTANCY SERVICES LIMITED - Full Stack Developer

 May 2017 – May 2019

 6460 Las Colinas Blvd, Irving, TX 75039

Description: CITI Technology services is a leading global financial services company. Worked on complete UI redesign of online CITI banking portal using Angular framework and Next Gen Architecture. CITI banking online portal allows customers to monitor their accounts and transactions, pay bills, transfer funds, keep track of their pending transactions, update their contact details and many more

functionalities in a secure way. Worked on Contact Us, Paperless and Statements and Manage Alerts modules to complete redesign using angular framework.

Responsibilities:

- Involving in Requirement Analysis, Design, Development and Testing phases.
- Building low level and high-level design documents from the business requirements.
- Developing UI layouts and front-end screens for web application.
- Conversion of legacy web application to newly redesign pages using Angular and Micro Services.
- Working in the Agile development environment with frequently changing requirements and actively participated in Scrum meetings and review.
- Used Angular JS 2/4/5/7 in creating the application modules.
- Writing Jasmine unit tests using Karma to verify Angular modules and JavaScript utility routines.
- Used Gulp and web pack for creating production ready builds.
- Integrating jQuery package provided by CITI vendor in our Alerts angular module to get Inbox Notifications.
- Developing android native screens for alerts feature for Android Mobile Application.
- Migrating from Google Cloud Messaging to Firebase to sending push notifications to the device for registered customers.
- Writing JUnit and android instrumentation test cased for android code for Sonar Coverage.

Environment: Angular 2/4/5/7, Android, TypeScript, HTML5, CSS3, SCSS, jQuery, SQL Developer, Eclipse, Visual Studio, Spring Tool Suite, Soap UI, Jenkins, Maven, Gradle, Android Studio, Putty, WinSCP, Bitbucket, Git, JIRA, Jenkins.

TATA CONSULTANCY SERVICES LIMITED - Full Stack Developer

 Mar 2016 – May 2017

 Chennai, India, 603103

Description: In Global Mobile CITI downloadable app, End-To-End Encryption refers to the mechanism of encrypting the data (typically on sign-on form data) on the device using a shared session key, passing it to the Global Mobile server and the server decrypting the data using the corresponding shared session key where the session key is established per sign-on and extracted using asymmetric key encryption scheme. There are two levels of encryption involved – Private and Public key encryption, AES256 key encryption. E2E is based on single key asymmetric encryption.

Responsibilities:

- Involved in Requirement Analysis, Design, Development and Testing phases.
- Implemented AES256 key encryption and Private-Public key encryption.
- Developed the server side and client-side business logic including encryption and decryption logic.
- Analyzed requirements and provided the functional and system impact.
- Created HLD and DLD as per requirements and design.
- Developed simulated logic to support lower environment and local development.

- Provided continuous support in all environments for technical and environmental issues.
- Configured and customized logs using Log4J to help debugging of application related errors.
- Store, retrieve and manipulate data for analysis of system capabilities and requirements.

Environment: Java / J2EE, Spring, Struts, JSP, ASDP (CITI developed framework), Web Services, JavaScript, jQuery, XML, SQL Developer, Eclipse, Spring Tool Suite, IBM WebSphere, Soap UI, Jenkins, Maven, Putty, WinSCP.

TATA CONSULTANCY SERVICES LIMITED - Full Stack Developer

July 2014 – Feb 2016

Chennai, India, 603103

Description: Global Mobile is a mobile banking application which supports both Android and iOS and different mobile browsers. It helps Citi banking customers to manage their account details, Payments, notifying them with Push Notifications, checking the account details in offline mode, redeems the reward points, changing their contact details and many more functionalities to the customer. This project aims at bringing all the mobile applications together on a single platform, thus enabling easy maintenance.

Responsibilities:

- Worked as a full stack developer to develop the code which is intended to deploy 20 markets with single code base.
- Involved in the High-level design and documentation.
- Involved in design discussions with various country back-end systems to design the schema globally.
- Had been involved in Performance improvements for the product and provided solutions to improve the same.
- Had improved the productivity of the project by writing interfaces and re-usable modules.
- Defect fixing and tracking.
- Documented Unit Test Packages and executed them during development.

Environment: Java / J2EE, Spring, Struts, JSP, ASDP (CITI developed framework), Web Services, JavaScript, Modular JS, HTML, CSS, jQuery, JSON, XML, SQL Developer, Eclipse, Spring Tool Suite, IBM WebSphere, Soap UI, Jenkins, Maven, Putty, WinSCP.

TATA CONSULTANCY SERVICES LIMITED - Java Developer

July 2013 – June 2014

Chennai, India, 603103

Description: Global Tablet is a first hybrid app in banking domain which was intended for 16 markets with single code base. It is developed in HTML5 tech stack and integrated with phone gap to create a hybrid application. The product has been successfully deployed in App store and has got good reviews and ratings.

Environment: Java / J2EE, Spring, Struts, JSP, ASDP (CITI developed framework), Web Services, JSON, XML, SQL Developer, Eclipse, Spring Tool Suite, IBM WebSphere, Soap UI, Jenkins, Maven, Putty, WinSCP.
