

Ramya Porandla

Software Engineer

ramyaporandla0511@gmail.com | +1 (414) 459-9390 | Bridgeport, CT | <http://linkedin.com/in/ramya-porandla-36aa552a6>

SUMMARY

Software Engineer with 3+ years of experience architecting and developing scalable, high-performance systems. Proficient in Java, Python, and microservices architecture, with a proven track record in API design, database optimization, and cloud-native deployment on AWS. Adept at translating complex requirements into robust backend solutions that emphasize reliability, maintainability, and efficiency. Committed to engineering excellence through clean code principles, automation, and performance-driven design.

PROFESSIONAL EXPERIENCE

Software Engineer, UnitedHealth Group | CT

Dec 2024 – Present

- Architected and deployed scalable microservices using Spring Boot, Java, and AWS ECS, improving data throughput for healthcare systems managing over 10 million patient records while ensuring HIPAA-compliant data security.
- Engineered RESTful APIs enabling interoperability between internal and partner systems, achieving 99.9% uptime and improving interdepartmental data exchange accuracy across distributed healthcare platforms.
- Optimized backend service performance through code profiling and resource tuning, reducing latency by 30% and enhancing throughput for high-traffic workloads handling millions of concurrent requests.
- Codified infrastructure automation using Terraform and AWS CloudFormation, reducing environment setup time by 45% and ensuring configuration consistency across multiple deployment stages.
- Integrated Prometheus and Grafana dashboards for live observability, decreasing mean time to detect and resolve incidents by 25% during production outages through proactive monitoring and alerting.
- Partnered with DevOps teams to refine CI/CD pipelines using GitHub Actions and Jenkins, achieving zero-downtime deployments and cutting overall release cycle time.
- Performed peer code reviews, established unit test frameworks with JUnit, and maintained coding standards, improving maintainability and reducing defect rates by 20% during continuous integration phases.

Software Engineer, MassMutual IT Global Business Services | India

Jun 2022 – Dec 2023

- Developed and maintained microservices with Java, Spring Boot, and PostgreSQL, enhancing transaction reliability and boosting system performance for core insurance and financial operations.
- Modernized legacy monoliths by decomposing them into modular microservices, cutting AWS EC2 costs by 25% and increasing horizontal scalability across multiple distributed services.
- Designed and integrated REST APIs supporting policy management workflows, synchronizing customer, claim, and underwriting modules while reducing data inconsistency incidents by 30%.
- Implemented automated CI/CD workflows using Jenkins and Docker, enabling consistent testing, version control, and deployment across environments, reducing manual intervention.
- Enhanced database responsiveness through SQL optimization, Redis caching, and profiling, improving query performance by 35% under high-volume transaction processing conditions.
- Coordinated with business analysts to transform complex insurance logic into automated backend workflows, ensuring 100% compliance and accuracy in policy rule execution.
- Executed unit, integration, and load tests using JUnit, Postman, and JMeter, achieving 98% code coverage and guaranteeing release stability across multiple product iterations.

Java Developer, Sage Softtech | India

Jan 2021 – May 2022

- Built and deployed enterprise-grade web applications using Java, Spring MVC, and Hibernate, supporting financial and retail clients with fault-tolerant and high-availability backend architectures.
- Created RESTful APIs for seamless communication with third-party platforms, improving system modularity and reducing data exchange latency by 25% across client ecosystems.
- Designed optimized MySQL schemas, indexes, and stored procedures to enhance query efficiency, reducing average database response times by 30% under concurrent access loads.
- Developed reusable authentication, logging, and configuration modules, cutting redundant development time by 35% across multiple enterprise software projects.
- Orchestrated automated build and deployment pipelines using Docker and Maven, accelerating environment setup time by 40% and minimizing human error in the release process.
- Partnered with frontend developers to integrate APIs with UI components, achieving seamless data synchronization and improving user-facing application response time by 20%.
- Led code reviews, managed Git version control, and contributed to Agile sprints, improving sprint velocity by 15% and ensuring continuous delivery of production-ready features.

SKILLS

Programming Languages: Java, Python, JavaScript (Node.js), Go, SQL, NoSQL
Frameworks & Technologies: Spring Boot, Django, Flask, Express.js, FastAPI, RESTful APIs, GraphQL, Microservices Architecture
Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CI/CD Pipeline
Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Cassandra
AI & Automation Tools: OpenAI API, LangChain, TensorFlow, Hugging Face Transformers, AWS SageMaker, ChatGPT, Azure AI Services
Testing & Monitoring: JUnit, PyTest, Postman, Selenium, Prometheus, Grafana, ELK Stack
Development Practices: Object-Oriented Design, System Design, API Integration, Performance Optimization, Agile/Scrum
Collaboration & Version Control: Git, GitHub, GitLab, Bitbucket, Jira, Confluence

EDUCATION

Sacred heart University | Fairfield, CT

Jan 2024 – May 2025

Masters of Science in Computer Science
