Summary:

- 4 years of IT Experience in Database Design, BI-Development of Microsoft SQL Server 2019/2016, Snowflake, Azure SQL DB, Azure Data Lake Store, Azure Data Factory, DBT on various development, test, and production environments in various business domains.
- Experience in writing T-SQL (DDL, DML and DCL) scripts in all MS SQL server environments.
- Proficient in creating Triggers, Tables, Stored Procedures, Functions, Views, Indexes, Dynamic SQL, joins, Cursors, CTE and Constraints in T-SQL to facilitate data consistency in MS SQL Server 2019/2016.
- Highly proficient in Tuning SQL queries and improving the query performance.
- Experience in optimization and performance tuning using SQL profiler, Index tuning wizard, Performance Monitor and Execution plan.
- Worked on Data Factory to load data from Data Lake to Azure SQL Data Warehouse and Azure SQL.
- Recreating existing application logic and functionality in the Azure Data Lake, Data Factory, SQL Database and SQL data warehouse environment.
- Worked on Data Lake Analytics (Azure Data bricks) to transform data as needed and build a tabular model in Azure Analysis Services and automated the refresh of tabular models using Azure Run books, Azure automation account and Azure Functions.
- Design and implement end-to-end data solutions (storage, integration, processing, and visualization) in Azure.
- Generated SSIS packages to Extract, Transform and Load (ETL) data from Excel, Database, XML File and Flat file source by using different SSIS transformations such as Lookup, Derived Columns, Condition Split, Aggregate, Pivot Transformation, and Slowly Changing Dimension, Merge Join and Union all.
- Experience in Virtual Warehouse, Performance tuning Snow SQL queries.
- Good knowledge on HVR Replication, replicated more than 400 tables from on-prem to snowflake.
- Used For-Each Loop Container, Sequence Container, Script task, Expressions, execute SQL task, Variables, send Mail Task, Package Execution task to achieve business needs.
- Expert in Creating and managing roles for security in SSRS reports.
- Expertise in using Microsoft Reporting Service (SSRS) with Report authoring, Report management, Report delivery and Report security.
- Ability to define and develop Report Structure with data definition, report layout and report definition language.
- Strong ability in defining query for generating drill through, drill down reports, canned and cache reports with drop down menu option, sorting the data, defining subtotals and creating report layouts using SSRS 2016/2014.
- Experience in developing Custom Reports and different types of Tabular Reports, Matrix Reports, Ad hoc reports, Conditional, List items, Charts, Sub reports and distributed reports in multiple formats using SQL Server Reporting Services (SSRS) in Business intelligence development studio (BIDS).
- Expert in Publishing and Sharing Workbooks, Data Sources with User Filter to Tableau Server, Setting Schedules for the extracted reports, Authorization and Permissions, incremental refresh extracts and updating server data that are using extracts.
- Worked on numerous dashboards in Tableau Desktop based on the data collected from different locations by importing and blending data from MS Excel and CSV files along with SQL Server Database.
- Deployed and managed containerized applications with Docker and Kubernetes, enhancing scalability, fault tolerance, and deployment efficiency for data-intensive applications.

- Strong knowledge in Power BI on how to import, shape, and transform data for business intelligence (BI), Visualize data, author reports, schedule systematized refresh of reports and create and share dashboards based on reports in Power BI desktop.
- Good Knowledge and experience on Power BI Gateways (Personal and Enterprise gateways).

Technical Skills:

Cloud Platforms: Azure (Synapse, ADF, Data Lake, Databricks), AWS (Lambda, Redshift, S3)

Databases: Snowflake, SQL Server, MySQL, Oracle

ETL & Data Processing: SSIS, Airflow, Informatica, Talend

Big Data & Analytics: Apache Spark, PySpark, Hadoop, HVR Replication

Programming: Python, SQL, Scala, Shell Scripting

Data Visualization: Power BI, Tableau, SSRS

Professional Experience:

Data Engineer

Hartford Steam Boiler- Hartford, CT.

May 2023 - Present

Roles and Responsibilities:

- Designed and implemented data models using Snowflake, including schema, tables, and views, improving query response time by 40%.
- Developed ETL pipelines using Python to extract, transform, and load data into Snowflake, reducing processing time by 30%.
- Developed complex SQL queries for data retrieval, aggregation, and transformation.
- Optimized query performance using indexing, partitioning, and other database tuning techniques.
- Developed Power BI and Tableau dashboards to visualize data and provide real-time insights to 20+ stakeholders, improving decision-making efficiency.
- Participated in training sessions for business and technical users on Snowflake, Python, SQL, Power BI, and Tableau.
- Developed and maintained technical documentation for Snowflake database, ETL pipelines, and data governance.
- Worked with Snowflake support to resolve technical issues and implement best practices.
- Improved ETL pipeline performance using parallel processing and other optimization techniques.
- Worked with business team to define KPIs and other performance metrics for data visualization.
- Analyzed data using statistical techniques and machine learning algorithms to identify trends and insights. Worked with third-party data providers to integrate external data into Snowflake.
- Developed and preserved data dictionaries and metadata repositories to enable data lineage tracking and planned and applied data retention policies to optimize storage costs.
- Collaborated with data architects and other technical teams to develop data integration strategies.
- Developed a scalable and secure data warehouse solution on AWS cloud using Snowflake, including database design, administration, and optimization.
- Designed and developed ETL/ELT pipelines using Informatica, Talend, and Snowflake to extract data from various sources such as Salesforce, Marketo, and HubSpot, transform and load it into Snowflake Data Warehouse.
- Computerized data ingestion using Snow pipe to enable near-real-time data processing.
- Developed Tableau visualizations to provide insights into key business metrics and enable data-driven decision making.
- Enforced Snowflake features such as user management, role-based access control, and data sharing and executed data security and access controls using Snowflake's security features.
- Conducted capacity planning and scalability assessments for Snowflake Data Warehouse.

- Worked with Data Scientists to enable analytics and machine learning on Snowflake data warehouse.
- Conducted performance tuning and optimization of Snowflake database and ETL/ELT processes and executed best practices for data governance, data quality, and data security.
- Developed and upheld automated ETL/ELT processes using Python, Airflow, and AWS Lambda.

Project Environment: AWS Lambda, AWS Glue, Redshift, Kinesis, CloudWatch, IAM, Snowflake SQL queries, SQL, DynamoDB, Sqoop, MYSQL, Apache Spark, ETL Data Pipelines, RDBMS, Hadoop, HDFS, YARN, MapReduce, Docker, Kubernetes, Python, Airflow, PySpark, Terraform, Ambari, Power BI, and Tableau, Bitbucket, Git, Jira.

Data Engineer

Centene Corporation , Saint Louis, MO

June 2021 to April 2023

Roles and Responsibilities:

- Designed database, data modeling, and managed using Erwin tool, optimizing database structure and reducing query execution time by 40%.
- Document business requirements, design specifications and operational manuals for custom and ETL data loads.
- Analyze user's requests and provide full production support related to reporting and data-oriented applications.
- Solve planned as well as ad-hoc production problems related to very high-volume data transformation, very large database design, performance optimization and reporting.
- Invested time & effort in continuously learning the latest technologies related to Data Management and BI applications, improving workflow efficiency by 20% through best practices adoption.
- Designed and implemented a data security plan, ensuring 100% adherence to enterprise security guidelines and reducing unauthorized data access incidents to zero.
- Analyze data access and modification requirements to ensure efficient SQL and optimal database design and code Review, Performance Tuning the Processes built
- Responsible for developing and maintaining formal documentation that describes the data and data structures, as well as implementing version control.
- Responsible for managing BI environment, which includes Business model, Data Model, Data sources, ETL tools, target data warehouse, Data marts, OLAP analysis and Reporting tools.
- Executed OLAP Cubes, Facts, and Dimensions for providing summarized and aggregate views of large sets of data and used Multi-Dimensional Expression (MDX) to access them.
- Initiated business critical KPIs using SQL Server Analysis Services (SSAS) representing aggregations in several different ways - hierarchically and using custom groupings that the company will use to analyze performance.
- Developed Custom Functions, Manual Running Totals and Complex Formulas for reports.
- Used calculations, sorts, filters and sections to enhance data presentation in reports. Established many Cascaded parameters in the reports using SQL SSRS.
- Create common, optimized data sources that allow data analysts and teachers/leaders on campuses to have a real time entry try point for data analysis.

Project Environment: Azure, Microsoft .NET, MS SQL Server 2017/2014/2008, SSIS, SSRS, T-SQL, Visual studio 2013, MSBI tools, VSTS, Service Now, Microsoft Office, Erwin.

Certification: AWS Certified Data Engineer – Associate

Education: Master's (COMPUTER SCIENCE) – UNIVERSITY OF MISSOURI-KANSAS CITY
