

RAVI BANDARI

AWS DevOps Engineer

San Jose, CA (Open to relocation) | M: (901) 231-5083 | E: ravi.b@jobmailoffer.com | [LinkedIn](#)

SUMMARY:

AWS DevOps Engineer with 5+ years of experience automating and optimizing cloud infrastructure on AWS. Expertise in Infrastructure as Code (IaC) using Terraform, Ansible, and AWS CloudFormation, as well as containerization and orchestration with Docker and Kubernetes. Proven expertise in reducing provisioning time, eliminating manual interventions through **CloudFormation, Lambda and CI/CD pipelines** via **Jenkins, GitLab CI/CD, and AWS CodePipeline**. Skilled in database optimization (**SQL/NoSQL**), network performance tuning (**VPC Peering, Route 53**), and proactive monitoring with **Prometheus, Grafana, Datadog, and New Relic**. Adept in **Agile/Scrum** delivery, cross-functional collaboration, and implementing **cost optimization** and **security best practices** aligned with **AWS Well-Architected Framework**.

SKILLS:

Cloud Platforms & Services: AWS Lambda, AWS Systems Manager, AWS OpsWorks, AWS Config, AWS SNS, SQS, AWS Fargate, AWS S3, AWS Elastic Beanstalk, AWS WAF, AWS Guard Duty, Security Hub, Azure Fundamentals

Programming Languages: Python, Java, JavaScript, C, Ruby, Shell scripting, Bash, TypeScript, Node.js

Containers & Orchestration: Docker, Kubernetes, Amazon ECS, Amazon EKS, Istio, Helm, Kustomize

Version Control & CI/CD: Git, GitHub, AWS CodePipeline, AWS CodeBuild, AWS CodeDeploy, GitLab CI/CD, Jenkins

Monitoring & Logging: AWS CloudWatch, AWS X-Ray, Amazon OpenSearch, Prometheus, Grafana, New Relic, Data Dog, ELK Stack (Elasticsearch, Logstash, Kibana)

Automation tools: Terraform, Ansible, CloudFormation

Network Skills: DNS, TCP/IP, HTTP, CDN, VPC Peering, Splunk, Route 53, AWS Direct Connect, Load Balancers (ALB, NLB)

Databases: SQL, NoSQL, Postgre SQL, Amazon RDS, Amazon DynamoDB, Amazon Redshift

Operating Systems: Windows, Linux (CentOS, Ubuntu)

Methodologies: Agile, Scrum, familiarity with Scaled Agile Framework (SAFe) practices.

Other skills: VMware Vsphere, VMware ESXi, Kafka, Jira, Confluence, Incident Management, On-Call Support

EXPERIENCE:

DXC Technology | AWS DevOps Engineer

June 2023 - Current

- Streamlined infrastructure provisioning by 40% using **AWS CloudFormation, Terraform, and Ansible**, improving infrastructure consistency and reducing manual configuration errors across environments.
- Reduced manual intervention in deployment processes by 25% through automation with **AWS Lambda** and **AWS Systems Manager**.
- Defined **SLOs** for API latency (less than 200 ms) and uptime (99.95%), monitored **SLIs** using Prometheus, Grafana, and Datadog, and optimized AWS Auto Scaling to maintain **99.9% SLA** compliance, cutting downtime by **40%**.
- Migrated legacy services to **Kubernetes**, implementing **Helm** and **Kustomize** for standardized deployments, building self-service automation scripts in **Python** and **Bash**, and documenting runbooks, reducing deployment time by **35%** and configuration errors by **40%**.
- Led cross-functional initiatives** to strengthen AWS security by refining **IAM policies**, enforcing **RBAC**, enabling encryption, and automating compliance checks, reducing security incidents by **30%**.
- Boosted database query performance by 25% and lowered latency by optimizing **Amazon RDS**.
- Implemented CI/CD pipelines using **Jenkins** and **GitLab CI/CD**, reducing deployment times by 40% and ensuring smooth, automated containerized application deployments.
- Utilized **JIRA** to manage tasks, track project progress and **Confluence** to document changes for team collaboration.
- Integrated **Prometheus, Grafana, and New Relic** for real-time monitoring and alerting, improving system uptime by 25% and reducing incidents through proactive monitoring.
- Analyzed application and infrastructure logs using **AWS OpenSearch**, reducing incident resolution time by 30%.

Tata Consultancy Services, India | Cloud DevOps Engineer

Jan 2021 – Aug 2022

- Automated application deployments using **AWS Lambda** and **Ansible**, decreasing manual intervention by 30% and enhancing efficiency by 25%.
- Managed cloud infrastructure using **AWS CloudFormation** and **Terraform**, reducing provisioning time by 35%.
- Conducted **cost optimization** initiatives using AWS Cost Explorer, Trusted Advisor, and rightsizing recommendations, reducing monthly spend by 18%.
- Automated routine tasks (log parsing, file management, system monitoring) and AWS operations (instance management, backups) by developing **Python** and **Bash** scripts, reducing manual effort and improving efficiency by **45%**.
- Optimized **AWS EC2** and configured **Auto Scaling** to maintain **99.9% uptime** during peak traffic.
- Containerized applications with **Docker** and orchestrated services using **Kubernetes**, reducing deployment downtime by 30% and boosting deployment frequency by 20%.
- Enhanced database performance by 20% by optimizing **SQL** and **NoSQL** workloads on **Amazon RDS**.
- Orchestrated the setup of **DNS** and **TCP/IP configurations** alongside **AWS Direct Connect**, achieving a 15% reduction in network latency and faster data transfers.
- Improved network performance by 15% and cut latency across regions with **AWS VPC Peering** and **Amazon Route 53**.
- Maintained and optimized **Windows and Linux servers** (CentOS, Ubuntu) by implementing performance tuning, patch management, and security hardening measures to ensure high availability and compliance with security standards.
- Engaged in source code management, including branch creation, utilizing **Git** and **GitHub**.
- Troubleshoot issues by analyzing logs with **ELK Stack (Elasticsearch, Logstash, Kibana)**, improving system reliability.

Infinite InfoLab | Cloud Engineer

July 2019 – Jan 2021

- Assisted in designing and implementing **hybrid cloud solutions** across AWS and Azure, enabling applications to securely integrate with on-prem systems.
- Supported **lift-and-shift migrations** from on-premises to AWS, validating data integrity, performing cut-over testing, and troubleshooting post-migration issues.
- Implemented **backup and disaster recovery strategies** using Amazon S3 lifecycle policies, EBS snapshots, and AWS Backup, improving recovery time objectives (RTO) by **20%**.

- Monitored infrastructure using CloudWatch, Azure Monitor, and custom scripts, helping reduce incident detection times by 15%.
- Assisted in configuring **load balancers (ALB, NLB)** and scaling policies, improving system availability during high-traffic periods.
- Collaborated with development, QA and Operations teams in Agile environments to deliver high quality software.

EDUCATION:

Master of Science in Computer Science - CGPA – 3.7/4
University of Alabama at Birmingham, Birmingham, AL

Aug 2022 – Dec 2023

CERTIFICATIONS:

Cybersecurity Certificate – The University of Alabama at Birmingham
AWS Certified Solutions Architect associate
