PROFESSIONAL EXPERIENCE

Senior Software Engineer

SiteZeus 06/2023 - 02/2025 Tampa, FL, United States

- Engineered and maintained dynamic web applications using Angular and React for the front end and .NET Core for the back end, ensuring seamless integration and performance optimization across complex modules.
- Designed and implemented high-efficiency indexing strategies and query optimizations with RavenDB, enhancing data retrieval speed and reliability in distributed systems.
- Utilized LinqPad for deep-level query profiling and debugging across MSSQL and RavenDB environments, improving database responsiveness and developer productivity.
- Orchestrated microservice deployments with Docker and Traefik, enabling scalable and resilient architectures tailored for high-availability scenarios.
- Integrated Keycloak into multi-tenant systems to enforce fine-grained access control and authentication, strengthening application security protocols.
- Maintained robust CI/CD pipelines via Azure DevOps, automating build, test, and deployment workflows to ensure smooth and frequent releases.
- Collaborated on code versioning through Azure Git, conducting thorough code reviews to maintain high engineering standards and improve cross-team code quality.
- Integrated Zeus-GPT to power intelligent features within Synuma, optimizing client prompt responses and driving adoption of AI-powered business tools.

Senior Software Engineer

Florida Blue 04/2020 - 05/2023 Dallas, TX, United States

- Led the design and development of a HIPAA-compliant patient management system using React, Next.js, C#, and .NET Core, enhancing workflows for appointment scheduling and medical record tracking.
- Built a customizable electronic health record (EHR) platform using React, Redux, and Node.js, enabling seamless data management across a network of clinics with varied operational needs.
- Transformed legacy monolithic systems into microservices architecture using Docker and Kubernetes, improving modularity, deployment agility, and system scalability.
- Applied performance tuning to SQL Server, optimizing complex report queries and accelerating critical business reporting pipelines.
- Integrated a machine learning-based risk assessment engine into React frontends, supporting personalized insurance recommendations based on health data analysis.
- Utilized Azure Active Directory for implementing secure, role-based access control and single sign-on across enterprise healthcare applications.
- Managed CI/CD workflows using Azure DevOps, automating build, test, and release pipelines to support continuous delivery of healthcare applications.
- Developed a serverless backend architecture using AWS Lambda and API Gateway to support real-time data access for mobile healthcare solutions, reducing infrastructure complexity.

SUMMARY

Seasoned full-stack developer with 9+ years of expertise in C#, ASP.NET, React, and Angular.

Proven track record in delivering 50+ high-quality, scalable web applications that meet both business goals and user needs.

Skilled in building and maintaining robust microservices using RESTful APIs and GraphQL, as well as leveraging cloud platforms like Azure and AWS to enhance application performance.

Passionate about utilizing technical expertise to drive innovation and consistently exceed project expectations.

SKILLS

C# .Net .Net Core C/C++

Web API PHP LINQ

Entity Framework T-SQL Blazor

Razor Terraform Node.js Java

Python MySQL MSSQL VB.NET

SQL Server PostgreSQL MongoDB

Azure Azure DevOps AWS XUnit

Apache Kafka RabbitMQ RESTful API

gRPC GraphQL

Git SVN Jira Agile/Scrum

Github/Gitlab CI/CD TDD Docker

Kubernetes Jenkins

React Vue.js Angular AngularJS

JavaScript ES6+ Webpack

TypeScript Next.js Nuxt.js Redux

Ngrx Jest Cypress Mocha Vite

WebSocket jQuery

Full Stack Developer

Caption Care

📅 04/2018 - 05/2020 📍 San Mateo, CA, United States

- Developed full-stack web applications supporting AI-guided ultrasound systems using .NET, Python, and Angular, focusing on user-friendly interfaces and reliable backend services.
- Built RESTful APIs with ASP.NET to connect frontend Angular components with backend logic, ensuring efficient and secure data flow across the system.
- Implemented AI algorithms using Python and integrated them into backend services, enabling real-time ultrasound guidance features powered by machine learning models.
- Applied Angular's modular architecture to develop and maintain reusable components, improving code scalability and development efficiency.
- Wrote and maintained unit tests using NUnit for .NET and Jasmine for Angular, ensuring stable releases and early bug detection across both front and back end.
- Collaborated on the development of an event-driven system using RabbitMQ to manage background processing tasks and asynchronous workflows.
- Leveraged AWS services for secure hosting and infrastructure management, using Python scripts for automation and deploying scalable cloud-based solutions.
- Integrated CI/CD pipelines using AWS CodePipeline and CodeBuild, supporting continuous integration and reducing manual intervention in deployment processes.

Web Developer

📅 06/2016 - 03/2018 📍 Houston, TX, United States

- Contributed to the development of internal web applications using ASP.NET MVC and JavaScript, supporting dynamic form creation, input validation, and data rendering tasks.
- Assisted in building responsive UI components with HTML, CSS, and Bootstrap, ensuring layouts adapted well across various devices and browsers.
- Participated in integrating front-end components with ASP.NET backend logic, collaborating closely with senior developers to connect views and controllers.
- Used jQuery to implement interactive features and improve the usability of existing pages, enhancing overall user experience in financial workflows.
- Converted UI designs from Figma and Adobe XD into functional, pixel-accurate web pages, aligning with company branding and UX guidelines.
- Supported bug resolution efforts by testing interfaces, identifying layout or script issues, and submitting fixes under team supervision.
- Wrote simple SQL queries to retrieve and display data within web forms, gaining foundational experience in database interaction and reporting.
- Followed version control workflows using Git, contributing to pull requests and participating in regular code reviews to improve code clarity and structure.

Mentored cross-functional teams

Promoting clean code principles, and leading code reviews that elevated overall engineering standards and junior developer growth.

Revamped the real-time analytics pipeline

Implemented the real-time analytics pipeline with Apache Kafka, increasing data processing speed by 40% and enabling near-instant reporting for high-frequency trading clients.

HIPAA Compliance in Healthcare IT

Ensured HIPAA compliance in healthcare IT systems by implementing secure data encryption, access controls, and regular audits, safeguarding patient information and meeting regulatory requirements.

Bachelor's Degree in Computer Science

University of Texas at Austin

📅 09/2012 - 05/2016
