EDUCATION

Rice University

Master of Computer Science (Specialization: Artificial Intelligence), GPA: 3.75

Houston, TX

Expected Dec 2025

Relevant Coursework: Artificial Intelligence, Deep Learning for Vision and Language, Reinforcement Learning

Trinity University

Bachelor of Science in Computer Science and Mathematics, GPA: 3.9

San Antonio, TX

Aug. 2020 – May 2024

Relevant Coursework: Artificial Intelligence

CERTIFICATES

- Generative AI Fundamentals – Databricks (Issued Sept 2025)

EXPERIENCE

AI Scientific Support Intern

Jun 2025 – Present

Office of Information Technology (OIT), Rice University

Houston, TX

- Benchmarked MLPerf training and inference on the newly built Nvidia H100/H200 GPU cluster for AI research.
- Conducted scalability tests on multi-GPU and performance comparisons among V100, A40, L40S, H100 and H200 GPUs with various AI applications.
- Built an AI-driven feedback system using Vision-Language Models (VLMs) and Large Language Models (LLMs) to analyze graphic design elements
 - * Designed evaluation metrics for design principles such as hierarchy, balance, and color contrast
 - * Implemented an interactive feedback loop via LLM-generated user prompts and visual analysis using VLMs
 - * Evaluated performance using Mean Absolute Error (MAE) against expert-rated annotations
- Developed a Convolutional Neural Network using TensorFlow to classify digital images as satirical or non-satirical
 - * Applied k-fold cross-validation and image augmentation to improve model robustness, achieving 90.21% accuracy
 - * Compared model performance with existing approaches from literature using benchmark datasets

Teaching Assistant

Aug 2025 – Present

Rice University

Houston, TX

- Supported instruction for graduate-level coursework on models and tools for data science.
- Held office hours to assist students with data science methodologies, coding assignments, and applied machine learning projects.
- Assisted in grading, providing structured feedback on projects and written assignments.
- Collaborated with the course instructor to refine materials and improve student outcomes.

Network Services Intern

Jun 2025 – Aug 2025

Office of Information Technology (OIT), Rice University

Houston, TX

- Deployed PoE-powered Raspberry Pi 5 network monitoring devices in campus network closets following detailed SOP, including hardware assembly, VLAN/gateway data collection, Infoblox IP reservations, and switch trunk port configuration.
- Configured Raspberry Pi OS with SSH, VNC, VLAN interfaces, static routes, LLDP, and SNMP services; integrated Microsoft Defender for Endpoint and Tenable Nessus Agent for security and compliance.
- Provisioned devices in Nectus for multi-VLAN monitoring, creating IPv4 monitors, assigning SNMP device categories, and linking to appropriate campus sites for ongoing network health tracking.
- Shadowed senior network technician to learn and support day-to-day operations in enterprise network infrastructure.
- Assisted with on-site hardware installations, including Ethernet port activations, wireless access point setups, and VoIP phone configurations.
- Gained hands-on experience configuring and troubleshooting campus-wide Wi-Fi networks and physical network connections.

- Supported inventory management and cable tracing tasks across academic and administrative buildings.

Technology Transfer Intern

May 2025 – Jul 2025

Office of Research – Technology Transfer Office, Rice University

Houston, TX

- Supported commercialization of Rice-developed technologies by assisting faculty, staff, and students through the process from invention disclosure to market readiness.
- Evaluated invention disclosures for sponsor obligations, public disclosure impacts, and initial patentability; conducted ongoing market analysis and patentability reviews.
- Created marketing summaries and industry outreach materials to attract potential licensees; collaborated with licensing and IP teams on patent strategy and industry contracts.

Data Analytics Intern

May 2024 – Aug 2024

Repsol Services Company

Houston, TX

- Analyzed data about oil and gas companies and wells, focusing on the locations and history leases and bids
- Assisted geologists using Microsoft Power BI and Python to enhance their understanding of the data and to answer their related questions

Applied Math Intern on “Sensitivity Analysis of Optimal Control Problems”

May 2023 – Aug 2023

NSF REU summer program at North Carolina State University (NCU)

Raleigh, NC

- Solved a system of ordinary differential equations to get the optimal path for a space shuttle re-entry trajectory
- Implemented approximations for midflight parameters for getting a re-optimized path using MATLAB

Cybersecurity Intern on “Data Driven Security”

Jun 2022 – Aug 2022

NSF REU summer program at Boise State University (BSU)

Boise, ID

- Analyzed attack sequencing with the ATT&CK ontology to create relationships between attack techniques with Python, Networkx, and Google Colab
- Coded a Graph Neural Network to predict if an attack is real or just noise

Data Science Intern on “Data Analytics and Information Retrieval”

Jun 2021 – Aug 2021

NSF Research Experiences for Undergraduates at University of North Texas (UNT)

Denton, TX

- Analyzed intrusion detection datasets using Machine Learning Classification with Python scikit-learn and Google Colab
- Coded three different algorithms (Gaussian Naive Bayes, Gradient Boosting Tree, and Logistic Regression) on the data and compared the results

Research Computing Intern

Jun 2019 – Aug 2019

Rice University, School of Engineering

Houston, TX

- Analyzed hurricane graphs from 1976-2005 for patterns by clustering data
- Used current hurricane data to predict future hurricane frequency and wind patterns in Houston using MATLAB
- Parallelized processing of MATLAB codes on High Performance Computing (HPC) clusters

CONFERENCES, PRESENTATIONS, AND PAPERS

- Poster Presenter (Using Singular Value Decomposition to Compare Fluid Flows from Different Bacterial Models), Math for All, April 6-8, 2024; New Orleans, LA
- Student Volunteer, PEARC22, July 10-14, 2022; Boston, MA
- Ngan Tran, Haihua Chen, Janet Jiang, Jay Bhuyan, Junhua Ding. Effect of Class Imbalance on the Performance of Machine Learning-based Network Intrusion Detection [J]. Int J Performability Eng, 2021, 17(9): 741-755.

SKILLS

Programming Languages: Java, Scala, C/C++/C#, Python, Conda

Research Computing and Data Science: MATLAB, MPI, Parallel Computing, Machine Learning, Singularity/Apptainer

Operating Systems: Linux, iOS, macOS, Windows

Cybersecurity: Intrusion Detection, AI-based Techniques, Attack Pattern Analysis

Applications: Microsoft Office (Word, Excel, PowerPoint, Power BI), Autodesk Inventor, Autodesk Fusion 360, Google Colab, Latex, Cocalc, Github
