

PROFESSIONAL SUMMARY

Full Stack Java Developer with 5+ years of experience in designing, developing, and deploying scalable enterprise applications. Proficient in **Java, Spring Boot, React.js, and RESTful APIs**, with strong expertise in **PostgreSQL, Oracle, SQL Server, and AWS Cloud services**. Skilled in **microservices architecture, CI/CD pipelines, automated testing, and cloud-native deployments**. Adept at optimizing application performance, ensuring security compliance, and collaborating in Agile/Scrum teams to deliver high-quality business solutions.

TECHNICAL SKILLS

Programming Languages	Java, JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frameworks & Libraries	Spring Boot, React.js, Node.js, Express.js, Hibernate, JUnit, Mockito
Databases	PostgreSQL, Oracle, SQL Server, MySQL
Cloud & DevOps	AWS (S3, EC2, ECS, Lambda, CloudWatch), Docker, Kubernetes, Jenkins, Git, GitHub
Testing & Methodologies	JUnit, Mockito, Selenium, Postman, Agile/Scrum, TDD, BDD
Caching & Messaging	Redis, Kafka, RabbitMQ
Monitoring Tools	ELK Stack, New Relic, Prometheus, Grafana
Security	Spring Security, OAuth2, JWT, SSL/TLS

EDUCATION

Northern Kentucky University – Highland Heights, KY
Bachelor of Computer Science, Minor in Information Technology & Mathematics

AWARDS & CERTIFICATIONS

- AWS Certified Cloud Practitioner – Amazon Web Services (AWS) — 2025
- Java Certified Developer – Duke University — 2025
- HTML, CSS & JavaScript for Web Developers – Duke University — 2024
- Git & GitHub Essentials – LinkedIn Learning — 2025
- SQL (Intermediate to Advanced) – HackerRank / DataCamp — 2024
- Princeton Hackathon (2024) – Built an AI-driven market sentiment analysis tool.
- MIT Hackathon (2024) – Developed a blockchain-based secure transaction tracking system.

EXPERIENCE

Java Full Stack / Backend Developer – American Express

May 2024 – Present

Responsibilities:

- Developed and enhanced Java/Spring Boot microservices with RESTful APIs, integrating them with React.js front-end components to deliver secure, high-performance financial applications.
- Designed and implemented PostgreSQL and Oracle database schemas, stored procedures, and optimized queries, reducing data retrieval time by 25%.
- Implemented caching strategies (Redis) to enhance response times and reduce redundant database calls.
- Integrated AWS services (S3, ECS, Lambda, CloudWatch) for scalable storage, container orchestration, and monitoring.
- Built CI/CD pipelines (Jenkins, Git, Docker, Kubernetes) to automate deployments and improve release efficiency.
- Developed real-time transaction processing and fraud detection logic, reducing fraudulent activity by 20%.

- Applied Spring Security & OAuth2/JWT for secure authentication and authorization across APIs.
- Collaborated with cross-functional teams in Agile/Scrum, conducting sprint planning, daily standups, and retrospectives.
- Performed unit testing (JUnit, Mockito) and integration testing (Selenium, Postman), ensuring high code coverage and production readiness.
- Monitored performance with ELK stack & AWS CloudWatch, enabling proactive issue resolution and minimizing downtime.

Environment: Java 17, Spring Boot, React.js, REST APIs, PostgreSQL, Oracle, Redis, AWS (S3, ECS, Lambda, CloudWatch), Docker, Kubernetes, Jenkins, Git, ELK Stack, JUnit, Mockito, Selenium, Postman, Agile/Scrum, Spring Security, OAuth2/JWT

Teaching Assistant – Northern Kentucky University

Aug 2022 – May 2025

Responsibilities:

- Assisted in teaching Java programming and Data Structures & Algorithms, supporting over 40 undergraduate students per semester.
- Held weekly office hours to provide tutoring, debug code, and explain core concepts (arrays, linked lists, recursion, sorting, searching).
- Graded assignments, labs, and exams, ensuring fairness and detailed feedback to help students improve.
- Conducted exam review sessions and small group workshops, boosting student confidence and understanding of complex topics.
- Supported faculty in preparing lab materials, coding exercises, and practice problems, bridging theory with practical applications.
- Facilitated hands-on coding labs, guiding students through debugging and problem-solving, which reinforced my own expertise in writing clean, efficient, and production-ready code as a Full-Stack Developer.

Environment: Java, Data Structures & Algorithms, Debugging, Mentorship, Communication, Academic Support

Full Stack Developer – Verisk Analytics

Jan 2019 – Dec 2021

Responsibilities:

- Designed and developed end-to-end web applications using Java, Spring Boot, React.js, HTML5, CSS3, and JavaScript (ES6+), delivering responsive and user-friendly solutions for enterprise clients.
- Built and optimized RESTful APIs, enhancing system performance and scalability across services.
- Designed and tuned SQL Server and PostgreSQL queries, indexes, and stored procedures, improving query performance by 30%.
- Integrated AWS cloud services (S3, EC2, Lambda) for serverless and scalable solutions.
- Migrated legacy monolithic applications into a microservices architecture, improving system maintainability and deployment cycles.
- Implemented CI/CD pipelines with Jenkins, Git, and Docker, streamlining releases and reducing deployment errors.
- Established automated testing frameworks (JUnit, Selenium), reducing post-release defects by 35%.
- Conducted code reviews, pair programming, and mentoring junior developers, improving code quality and team collaboration.
- Integrated New Relic for application performance monitoring and proactively resolved system bottlenecks.
- Collaborated with business analysts and QA teams to refine requirements and deliver timely, high-quality solutions in Agile sprints.

Environment: Java 11, Spring Boot, React.js, JavaScript (ES6+), HTML5, CSS3, REST APIs, PostgreSQL, SQL Server, AWS (S3, EC2, Lambda), Docker, Jenkins, Git, JUnit, Selenium, New Relic, Agile/Scrum
