SUMMARY

Software QA Engineer with extensive cloud and software as a service (SaaS) experience. Expertise across Front End, Back End and API Automation, Cypress with JavaScript, Selenium with Java, NUnit with C# and Performance Testing with Jmeter (Load/Stress) and developed effective CI/CD pipeline using Jenkins, GitHub Actions, and TeamCity.

EXPERIENCE

BigBear.ai, SDET

Jan 2023 - Present

- Designed scalable test automation framework with Cypress using JavaScript / TypeScript.
- Maintained existing Selenium tests written in C# . Net framework.
- Developed NUnit, Selenium, Cypress, Pester tests and maintained frameworks accordingly.
- Monitored CI flaky tests and applied immediate improvements when needed.
- Leveraged AI-powered testing tools to enhance test automation, increase test coverage, and enable smarter, self-healing tests
- Led the migration and optimization of legacy Selenium tests (C# .NET) to Cypress, improving script maintainability, reducing execution time, and significantly accelerating the release cycle from three months to bi-weekly.
- Optimized CI/CD pipeline by parallelizing test executions, filtering tests based on priorities, and reducing test execution time from 2 hours to 15 minutes.
- Added unit tests using the Pester PowerShell framework to ensure code quality.
- Developed and maintained NUnit tests for API projects written in Java, providing comprehensive coverage for backend and API
- Facilitated QA automation meetings to disseminate best practices, foster knowledge sharing, and collaborate on innovative ideas to enhance existing test automation strategies
- Conducted API testing using Postman and JMeter to ensure performance benchmarks were met.
- Developed JMeter tests for load, stress, and performance testing to assess system scalability under various conditions.
- Conducted backend testing, including API testing and database validations (MS SQL Server, PostgreSQL, DynamoDB, S3).
- Led and mentored cross-functional teams of automation and manual QA engineers with a collaborative environment.
- Worked with the DevOps team to manage AWS cloud resources, including EC2, S3, and CloudWatch, Grafana, to ensure smooth and scalable testing and deployment pipelines.
- Improved test execution time by improving the reusability of test scripts.
- Updated existing testing framework by reducing vulnerability by 80 % via Snyk tool analysis.
- Upgraded existing UI test coverage with automation hybrid approach utilizing api post requests to avoid UI interactions.
- Worked on migration effort to modern AngularJS by updating existing tests.

uPerform, Sr. Automation QA / SDET

Jan 2020 - Jan 2023

- Worked with the DevOps team to manage AWS cloud infrastructure for application testing and deployment to manage EC2 instances optimal schedule to reduce cost
- Conducted Pulls Requests reviews and provided constructive feedback to offshore & onshore QA Automation engineers
- Worked as part of core Automation Team with new automated testing frameworks design
- Conducted Automation inspections - new automation scripts code review
- Developed and maintained an automation framework and scripts to drive quality using MS Visual Studio and C# . Net
- Designed API automation framework based on HTTP client and AWS API Gateway. Developed tests for all API methods
- Database automation for PostgreSQL and DynamoDB based on requirements at early stage of the project
- Experience with RestSharp API Framework.
- Performed Pull Requests and code review analysis for other Automation team members
- Application developer code analysis for testing approach and possible reusability for automation scripting
- Monitored CI flaky tests and applied immediate improvements
- Developed Automation Frameworks for web-based applications and Selenium and Nunit based scripts
- Experienced in providing the efficient locators strategy like ID, XPath / CSS and others
- Cross-browser automated and manual testing using Browser Stack
- Configured CI/CD for new builds when needed
- Simplified and accelerated automated test suite execution on CI/CD with better reusability
- Added frameworks to the continuous integration process in order to generate the fastest deployments
- Worked on Migration of existing client to the AWS Cloud
- Hands-on experience with Jmeter as performance testing tool and for API testing
- Mentored and Led Automation and Manual QA cross-functional Team members.

- Performed Smoke Testing, Functional Testing, System Integration Testing, Regression testing, Database Testing, and White Box testing at various phases of SDLC
- Reduced build/deploy time by CI/CD optimization on TeamCity
- Involved in Test cases and test data set up using SQL queries and POST requests
- Windows Desktop application automation experience using WinAppDriver & Autot v3
- Assisted and substituted Scrum Master when needed.
- Worked closely with Developers, Business Analyst, Architects and Project Owners providing feedback on product Sprint Demos and Refinements
- Worked on multiple projects training new staff members.

TD Ameritrade, QA Lead Automation Engineer

Jun 2016 - Jan 2020

- Mentored and Led Automation and Manual QA cross-functional Team members
- Performed Smoke Testing, Functional Testing, System Integration Testing, Regression testing, Database Testing, and Black Box testing at various phases of SDLC.
- Analyzed requirements, Use Cases, functional design and design documents.
- Responsible for developing Test plan based on Functional Specification and Technical Specification of the application.
- Developed and executed Test cases and verified actual results with expected results
- Conducted Automation inspections - new automation scripts code review.
- Reduced build/deploy time by 90% by creating Jenkins jobs for execution on Browser Stack and Perfecto platforms.
- Involved in developing Test cases and Test data
- Used Jira and HP ALM for requirements management, planning, scheduling, running tests, defect tracking and manage the defects and executing the test cases.
- Worked with Developers, Business Analyst, Architects and POs, UX to understand project, providing feedback
- Participated in Usability Testing with end users
- Was involved with A/B testing with providing feedback and suggestions to PM and PO
- Experience with developing and maintaining Rest Assured Framework for API Automated tests
- Performed back-end validations with JDBC Api library
- Involved in automating test cases using Selenium WebDriver using Java programming language.
- Developed Test Scripts to test the functionality of application using Selenium Web driver and Appium
- Developed Automation Frameworks for web-based applications and designed scripts
- Extensively worked in executing tests by using Selenium TestNG in different browsers.
- Created Framework using Selenium WebDriver, Selenium Grid, Java and TestNG/Junit.
- Experience with Behavior Driven Development (BDD) using Cucumber and Gherkin
- Experience with Git, Apache Maven and Jenkins
- Basic knowledge of PowerShell scripting as part of the Jenkins setup
- Experienced in providing the efficient locators strategy like XPath / CSS
- Developed automated test scripts defining scenarios and procedures to test the Performance of the Application using LoadRunner 12. and Jmeter
- Worked on multiple financial domain Projects in parallel mode
- Assisted in training of junior testing staff
- Completed courses and received Certifications of Cyber Awareness and handling PII (personally identifiable information and PHI (Protected health information)
- Working with multiple Cross-Functional team members to determine their Automation needs
- Attended Walkthrough meetings for requirement reviews and provided feedback to the BA
- Collaborated with BA and DeVops to analyze acceptance criteria and requirements
- Actively participated in Design and Product Demo Meetings
- Experience with BDD/Cucumber and Fitnesses based Testing Framework
- Collaborated with BA and DeVops to discuss Defects related issues
- Conducted performance testing of the application by running various VuGen scripts in order to determine the maximum number of users that can log into the application at a given time by using LoadRunner.

Verizon, Quality Assurance Analyst

Jun 2014 - May 2016

- Responsible for Planning and Analysis of the project and involved in creating Test Plan, Test Scripts and Test cases
- Analyzed and maintained requirements using Traceability Matrix (RTM) between Requirements and Test Cases.
- Created and managed test cases and detailed test procedures for administered software tests.
- Determined acceptance criteria and recorded software test results.
- Analyzed test results and recorded and reported defects.
- Executed Functional, Regression, and end-to-end testing required on GUI applications.
- Wrote and executed Automated test cases using Selenium WebDriver to automate manual testing solutions.
- Worked on creating a test case for Object Driven Framework for Selenium WebDriver.

- Wrote and executed new test procedures, updated test procedures as functionality during testing cycle.
- Involved in Integration, Regression, System, and User Acceptance Testing (UAT) during the various phases of SDLC
- Documented and tracked software Defects in Jira.
- Tested the application for browser Compatibility using Cross-Browser validation of latest and Beta versions of various browsers and platforms on Browser stack
- Interacted with developers and Business Analysts to resolve defect issues.
- Generated and created scenarios in LoadRunner controller.
- Ran the scenarios & analyzed the results by monitoring the scenarios using LoadRunner.

*Agile1tech, **Quality Assurance Analyst***

Jan 2012 - Jun 2014

- Involved in analyzing the Business Requirements Documents and Functional Design Documents.
- Developed Test Plan, Test cases and Test Scripts.
- Involved in writing and implementation of Test cases for various modules using Rational suite
- Involved in Functional, Regression, Integration, System Testing and User Acceptance testing.
- Manual testing for checking the flow of the application Functionality, Positive and Negative testing
- Maintained and executed Selenium Regression suite.
- Prepared and Execution of test scripts using Selenium ID WebDriver, Eclipse ID.
- Prepared requirement traceability matrix document to map the requirement with test cases.
- Utilized boundary value analysis and equivalence class partition techniques in preparing test cases.
- Developed complex SQL queries to perform back-end testing in MS SQL Server RDBMS
- Interacted with developers and other QA Engineers to address quality problems.
- Tracked and Reported software defects and interacted with developers to resolve technical issues.
- Experience with Defect Reporting, Tracking and Resolution capabilities.

EDUCATION

Riga Technical University (RTU)

*Unfinished Master's • **Human Resources Management** • 2001 - Present*

Riga Technical University (RTU)

*Bachelor's Degree • **Business Administration** • 1999 - Present*

Riga Technical University (RTU)

Junior Economics Achievement Diploma • 1997 - Present

LICENSES & CERTIFICATIONS

AWS Certified Solutions Architect – Associate Certified

Certified Scrum Master (CSM)

ISTQB Certified Tester

Cyber Awareness & PII/PHI Compliance Certified
