SUMMARY

Accomplished QA Automation Engineer with 7+ years of experience in manual and automated testing across healthcare, insurance, and enterprise applications. Proven expertise in designing robust automation frameworks, leading QA initiatives, and ensuring software reliability through scalable test solutions. Known for building cross-functional collaboration, mentoring teams, and driving continuous quality improvement aligned with Agile delivery.

EXPERIENCE

Children's Hospital, Los Angeles, CA, QA Automation Engineer

Sep 2023 - Present

Developed automation solutions using Java and Selenium WebDriver to support multiple EMR and claims management systems. Integrated BDD practices using Cucumber and Gherkin, linking acceptance criteria directly to automation. Built and executed API test suites using RESTAssured Library and supported exploratory API testing with Postman. Connected to healthcare databases via JDBC to run dynamic SQL validations against Oracle and PostgreSQL. Utilized Maven and Jenkins for project build, execution, and continuous test deployment. Mentored junior team members and enforced code quality standards through regular peer reviews. Tracked bugs, test plans, and sprint deliverables using JIRA within a Scrum-based Agile framework.

Rally Health, San Francisco, CA, Test Automation Engineer

Oct 2021 - Aug 2023

Created and maintained UI automation scripts using Selenium WebDriver, TestNG, and Java for healthcare scheduling and billing systems. Applied Behavior-Driven Development by building reusable step definitions with Cucumber and Gherkin. Built backend data verification layers using complex SQL queries integrated via JDBC into automation flows. Designed test collections in Postman and scripted validations using RESTAssured Library for appointment APIs. Managed test dependencies and reports through Maven and executed jobs via Jenkins nightly builds. Used Git and GitHub for version control, and JIRA for sprint planning and test tracking.

Kaiser Permanente, Oakland, CA, QA Analyst

Nov 2019 - Sep 2021

Transitioned from manual testing into full automation roles, supporting UI and service validation for diagnostic tools. Authored and maintained Selenium WebDriver tests in Java, using JUnit and Maven for execution. Created Gherkin-based scenarios and linked them with automation scripts in Cucumber for better clarity and traceability. Ran SQL queries to verify backend data integrity and used JDBC for real-time database connections. Automated and validated REST APIs using RESTAssured Library, while conducting pre-release tests with Postman. Worked in Agile teams, attending daily standups and retrospectives, using JIRA to track stories and defects.

Optum, Long Beach, CA, Software QA Engineer

Feb 2017 - Oct 2019

Executed functional, regression, UI, cross-browser, and API testing to ensure robust software quality. Developed and maintained comprehensive test plans, cases, and regression suites to enhance coverage and efficiency. Managed defect lifecycle in JIRA, collaborating with teams to resolve issues promptly. Automated regression tests with Selenium WebDriver and Java, streamlining testing processes. Performed API testing and SQL validation to ensure data integrity. Supported multiple successful releases, delivering thorough testing and accurate documentation.

EDUCATION

Al-Rafidain University, Iraq

Bachelor in Computer Science

SKILLS

Java • SQL • HTML • CSS • XML • Gherkin • Selenium WebDriver • TestNG • JUnit • Cucumber
