

Professional Summary

Results-driven **Software Development Engineer in Test** with **5+ years of experience** in **automation, API testing, UI testing, and database validation** across **entertainment, finance, and healthcare** industries. Proven expertise in **developing and maintaining automation frameworks**, ensuring **high-quality software releases**. Skilled in **Java, JavaScript, Selenium, Cypress, Postman, REST-Assured, and SQL**, with a strong focus on **Agile/Scrum methodologies** and **CI/CD pipelines**.

Skills: Java, JavaScript, Python, Selenium, Cypress, JUnit, TestNG, Cucumber, Postman, SQL, MySQL, Oracle, REST-Assured, PostgreSQL, JDBC, Concourse, Jenkins, Docker, AWS (EC2, S3, Lambda), GitHub, Git, Automation Testing, Manual Testing, API Testing, UI Testing, Database Testing, BDD, DDT, Smoke, Sanity, Regression, Agile/Scrum, CI/CD, Page Object Mode

PROFESSIONAL EXPERIENCE

Comcast – Philadelphia, PA

QA Analyst / SDET • 01/2024 – Present

- Conduct functional, sanity, and regression testing, ensuring validation of new and existing functionalities in a BDD automation framework using JavaScript, Cypress, and Cucumber.
- Automate test execution, decreasing manual testing efforts and accelerating release cycles by 25%.
- Utilize Jira for test management, tracking, and reporting, enabling seamless communication and issue resolution across teams and monitor CI/CD pipeline using concourse.
- Collaborate with Agile/Scrum teams to enhance sprint deliverables, and meet deadlines efficiently.
- Mentor new team members, facilitate onboarding process and foster a culture of knowledge sharing.

Northwestern Mutual – New York, NY

SDET • 05/2022 – 11/2023

- Developed and maintained a Selenium-based automation framework in Java, reducing manual testing efforts by 15% and reducing critical defects by 22%.
- Enhanced test development speed by 30% using Page Object Model (POM) and OOP concepts.
- Automated API testing with REST-Assured and conducted manual validations using Postman.
- Conducted database testing with SQL, for data integrity and resolving pre-production discrepancies.
- Streamlined CI/CD pipelines with Jenkins, integrating automated test suites to reduce deployment failures by 25% and ensure integration between existing and newly developed code.
- Analyzed failures and reported defects with precise details for clear communication with development team.
- Trained and guided QA team members, reducing onboarding time by 20% and fostering technical excellence.

Aetna – Chantilly, VA

QA Engineer • 01/2020 – 04/2022

- Performed API testing with Postman, increasing test coverage by 20% , detecting critical defects in early stages.
- Conducted backend testing using SQL, identifying and resolving database defects, ensuring data accuracy.
- Authored detailed test cases and scenarios with BDD (Gherkin), improving communication and across teams.
- Collaborated with cross-functional teams to address production issues, improving overall product quality by 25%.
