US Citizen | 626-428-5272 | acieshk@gmail.com | <https://LeoToDev.com>

Summary

Full-Stack Developer with 13 years experience designing, building, and deploying scalable web applications. Proven expertise in Angular, Node.js, and Python, with a strong background in RESTful API development and cloud infrastructure (GCP, Azure, AWS). Passionate about creating efficient, user-centric solutions and leveraging automation to improve processes and performance.

Technical Skills

Languages:	JavaScript, TypeScript, Java, Python, C#, PHP, SQL, HTML5, CSS3
Front-End:	Vue.js, React, Angular, SCSS, HTML, CSS, Qt/QML, JavaFX
Back-End:	Node.js, Express.js, REST APIs, ASP.NET, J2EE
Mobile:	React Native, Android (Java/Kotlin), ios (swift)
Databases:	PostgreSQL, MySQL, MongoDB, SQL
Cloud & DevOps:	GCP, Azure, AWS, Vercel, Docker, Git, CI/CD
Other:	Agile/Scrum, UI/UX Design, API Development, LLMs, EDI

Education

B.S. in Computer Science. University of California, Irvine | Graduated 2012

Professional Experience

Lead Software Developer/Tech Lead | LeoToDev.com

2024-05 to Present

- Spearheaded the end-to-end development and successful launch of AskNETA.com and its iOS/Android applications from concept to production within six months, achieving 1,000+ Monthly Active Users (MAU) and driving early user adoption.
- Architected and deployed an advanced LLM + RAG pipeline on Vertex AI delivering industry-leading accuracy validated by electrical inspectors and implementing innovative hallucination mitigation strategies.
- Developed a robust full-stack solution (React, React Native, TypeScript, Express), maximizing code reusability across platforms, accelerating feature delivery, and solving complex mobile challenges, including engineering a custom blurred text feature where standard libraries were insufficient.
- As the sole technical owner, established and managed a 1-week Scrum cycle for agile development, guided product strategy, and led organic customer acquisition efforts through a custom Reddit bot, utilizing Posthog analytics for data-driven UI/UX optimization.

Tech Stack: React, React Native, AWS, TypeScript, Express, Posthog, Vertex AI, Google Document Parser, Expo EAS, Coolify, Posthog, Vercel, Supabase

Senior Software Engineer/Cloud Analyst | Accenture Inc

Sep 2019 to April 2024

- Engineered and deployed a web-based monitoring dashboard using Vue.js and Node.js to track real-time performance metrics for Dialogflow and YouTube Data APIs, reducing troubleshooting time by 35%.
- Developed and integrated an AI-driven chatbot using Dialogflow and AppScript into internal workflows, automating ticket triage and query resolution to save 500+ work hours annually and reduce human intervention by 60%.
- Supported and maintained critical Google products, including Android Play Store and YouTube Data API, diagnosing and resolving issues to ensure continuous operation and performance.

Technical Stack: Vue.js, Node.js, Python, Java, Kotlin, JavaScript, AppScript, Dialogflow, GCP, REST APIs, Docker

- Developed a real-time bowling management system using Angular 7 and Node.js with WebSockets, enhancing user engagement and enabling cross-location competition.
- Built a real estate valuation platform with Angular 4 and PHP, improving data accuracy and processing reliability for agents.
- Managed the full project lifecycle from architecture and design through coding, testing, and deployment, consistently delivering solutions on time and within budget.

Technical Stack: Angular 4/7, TypeScript, JavaScript, SCSS, HTML, PHP, Node.js, WebSocket, PostgreSQL, MySQL

Software Developer | Dot-Line Transportation**June 2016 to Dec 2016**

- Developed a full-stack freight tracking and logistics management system using Angular 2 for the front-end and a C# back-end to provide real-time tracking and quoting.

Technical Stack: Angular 2, TypeScript, SCSS, C#, ASP.NET

Software Developer (Founder) | Bling**2015 to 2016**

- Engineered a real-time, audio-driven image recognition system for an Android-based smart glasses prototype, leveraging the Google Cloud Vision API for OCR and object detection.
- Developed the core Java application to process visual input and provide live verbal feedback to assist visually impaired users with navigation and text recognition.
- Led the full end-to-end development cycle, from initial prototyping and API integration to user-feedback-driven testing and refinement.

Technical Stack: Java, Google Cloud Vision API, Android SDK, Digital Image Processing, OCR

Analyst Programmer | Kerry Logistics**Mar 2014 to May 2015**

- Led an Electronic Data Interchange (EDI) team in developing and maintaining a C#-based freight forwarding platform, automating manual processes and enhancing operational efficiency.
- Engineered ERP integrations with client systems to streamline data flow and implemented Test-Driven Development (TDD) to improve system reliability and reduce errors.

Technical Stack: C#, ASP.NET, SQL, ERP Integration, EDI, Java, WebLogic

Software Developer | Ackila Inc**Aug 2013 to Nov 2013**

- Software Development: Led a team in developing interactive features for EVA Air's Inflight Entertainment System, focusing on frontend development to enhance passenger experience.
- CI/CD Pipeline Automation: Designed and implemented automated deployment pipelines using BASH scripts, streamlining the software loading process and reducing deployment time by eliminating manual steps.
- Client Collaboration: Worked closely with clients and end-users to gather requirements, ensure alignment with project goals, and deliver a high-quality product.

Technical Stack: Qt, QML, MySQL, Linux, Android, Git, CI/CD.

Front End Developer | Ephex Online**May 2013 to July 2013**

- Developed responsive e-commerce websites on the Magento platform using PHP, JavaScript/HTML/CSS.

Technical Stack: PHP, JavaScript, Magento, MySQL, WordPress, WooCommerce

Software Developer | Sarakki Associates Inc**Feb 2013 to July 2013**

- Developed a JavaFX/ScalaFX user interface for an immigration system module for the Mexican Immigration Department.

Technical Stack: JavaFX, ScalaFX, PHP, MySQL

Software Developer | Connecta System**Dec 2012 to Jan 2013**

- Architected and built a Java (J2EE) based advertising and couponing system for touch-screen kiosks, incorporating OCR for card processing.

Technical Stack: J2EE, Java, OCR

Part-time PHP Programmer | BizTech**Dec 2010 to June 2011**

- Developed web applications and an Android app with SQL database access, leveraging PHP, JavaScript, HTML, and CSS; created an EMR system with a graphical interface for doctors and worked with CMS platforms like WordPress and osCommerce.

Technical Stack: PHP, Javascript, CSS, HTML, Android Java Programming.
