

VLAD SELSKY

Boston, MA • vstechcareer@gmail.com • 617-299-0623

SAP SUPPLY CHAIN LEAD • PRODUCT ARCHITECT • TECHNO/FUNCTIONAL ANALYST

Well-rounded, seasoned SAP Supply Chain Consultant with a 28-year proven track record of leading and delivering full life cycle implementations, upgrades, production support and innovations. Possess excellent communication and collaboration skills, anticipate and understand customer needs, build stakeholder consensus, define strategic roadmaps and lead global teams. Expertise in Materials Management, Logistics Execution, Warehouse Management, MRP/Kanban, Plant Maintenance, HCM, Security, Fiori and S/4. Versed in Scrum management, sprint planning, and applying Waterfall and Agile methodologies. Frequent SAP America trainer and SAP ASUG conference presenter.

PROFESSIONAL EXPERIENCE

GE Aerospace, Arkansas City, KS

July 2022 – Mar 2025

SAP MM Product Architect (Contractor)

GE Aerospace Strother plant implements ECC 6.0 to transform its jet engine manufacturing, maintenance and refurbishment business.

- Identified FRICE gaps, drove the design, and managed sprints for timely solution delivery
- Owned all configuration and functional spec documentation. Procure-to-Pay involved heavy emphasis on MRO process, external service procurement, and subcontracting
- Provided demos of various features, e.g. MRP, scheduling agreements, service orders
- Architected a half dozen interfaces between MM and a third-party WM system (Dematic EMS) which relied on robotics picking technology. Used SAP PI/PO for XML and file-based data exchange. Relentlessly pursued continuous improvement in error monitoring, stock discrepancy resolution, automation, and usability.
- Designed an interface to automate SAP physical inventory adjustments based on the WMS adjustment
- Designed a solution, based on use of reservations and storage location transfers, for floor mechanic to request parts replenishment; stockroom process the move request; and mechanic confirms receipt. Incorporated custom security approach. Custom validations ensured Finance-controlled inventory levels and correct goods issue procedure.
- Designed a solution to get 'hot picks' prioritized for production staging and bypass storage
- Relied on my SAP Security expertise for the design of all security roles in parallel with developing global templates for future plants
- Led testing of IDoc-based analytics interfaces to ensure the exclusion of classified military data
- Extensive collaboration with other teams (FI, QM, Product Engineering/PM, Order Billing & Collection/SD)
- Provided production support during Hypercare and cross-trained new team members

Keurig Dr. Pepper, Burlington, MA

Nov 2021 – Mar 2022

SAP Supply Chain Analyst (Contractor)

KDP has an extensive network of 35 plants and DCs running a mix of WM/EWM with Batch Management and HUM.

- Business Lead for the preparatory phases of a 'Contactless Shipment' project. The objective was to integrate with a SaaS system (MacGregor MFolio) for carrier check-in/check-out and electronic Bill of Lading with digital signatures. Supported RFQ process and vendor selection, business case development, detailed requirements gathering and gap analysis, and API definition.
- Served as interim product owner and implemented some production WM/EWM enhancements to clear up the backlog of prior product owner, with focus on Logistics Execution intra- and inter-company transfers

VISTAPRINT, Waltham, MA

July 2007 – Sep 2021

SAP Supply Chain Architect / Principal Analyst

(2018 – 2021)

SAP ecosystem is modernized with S/4 upgrade. Logistics embarks on a transformational journey with EWM.

- Built the business case for EWM implementation and owned design for key areas including:
 - New Production system interface using next-generation JIT (Fiori) solution for make-to-order materials
 - Goods issue backflush/Kanban interface for make-to-stock materials
 - Defining approaches for critical reports using a combination of standard EWM, Fiori, data lake consumed by plant analytics, and SAP Analytics Cloud
 - Partial Level 2 Inspection - A custom GR 'sampling' approach in lieu of QM
 - Using an SLA pick time defined on the material, developed approach for sorting handler's tasks while balancing needs of the SLA with efficient movement through the aisles
 - Detailed evaluation of Batch Management fit for the traceability and Customs tracking requirements
- In under 3 weeks, delivered a custom Stock Outage solution for Kanban materials by enhancing Kanban Board Fiori app, sending outage and resolution email alerts, and mitigating the WM open TR.
- Contributed to S/4 2020 upgrade from 1809 with comprehensive testing, new functionality assessment and delivery, and new Fiori activation.
- Rearchitected SAP purchasing approvals, working closely with ABAP and Workflow developers to implement an innovative custom solution, that addressed many of SAP's shortcomings and scalable to meet Vistaprint's frequent organizational changes:
 - Reduced hundreds of release strategy records to dozens and implemented a self-service capability (replacing configuration) to administer approver changes
 - Built custom utility to perform approvals for PRs, POs, and Contracts in one simplified UI, replacing a half dozen approval transactions
 - Developed custom security check eliminating numerous release code-specific security roles
 - Automated departmental approver routing based on mapping to entered cost center and G/L
 - Enabled Finance and Supply Chain approvals for parallel workflow branches in place of sequential
- Sole owner for defining Fiori strategy and delivering Fiori applications to Purchasing, Maintenance and Logistics. Activated over a third of 50+ apps using Fiori Launchpad Designer, including setting up catalogs, groups, spaces, and pages. Implemented high impacts apps, which also required some key enhancements, including:
 - Report Malfunction - a huge step forward for how maintenance requests are submitted and a complete revamp of the way Technicians process the work
 - Technical Object Analysis - introduced a custom measure to track repeat equipment breakdowns
 - Create Purchase Requisition - transformed self-service purchasing for indirect spend. A subsequent iteration enabled punch out catalogs
 - My Inbox - simplified purchasing approvals and delegations
- Key contributor to S/4 1809 (Brownfield) upgrade, owning activities including testing remediated code, regression testing, new feature assessments and PO conversions.
- Enhanced WM system to meet the increasing sophistication of logistics:
 - SAP outbound interface to automated guided vehicle (AGV) for picking
 - Cross docking of received goods to the line
 - "Hot Picks" and pick confirmation integration with the Production system
- Rolled out new process to capture sustainability data for key raw materials using classification system
- Set up new subcontracting end-to-end process for spare parts refurbishment

SAP Supply Chain Team Lead / Lead Analyst

(2013 – 2017)

Vistaprint's manufacturing presence rapidly grew to nine plants. I led the team's growth while concurrently deepening our solution offerings.

- Led team providing mentorship and work prioritization to junior members including off-shore.
- Established documentation standards and deliverable templates; developed training; led annual summits with global stakeholders to set short- and long-term roadmaps; organized SAP demos and software evaluations.
- Architected and deployed a new make-to-order supply chain for Promotional Products Apparel and Gifts business unit. Set up new processes for purchasing and MRP, inventory management, and delivering product to production.

The design was extensively automated due to tens of thousands of new SKUs and had to support short lead times and no minimum order quantities.

- Designed four interfaces (materials, order demand, production orders, inventory broadcast) with custom production planning system
- Designed three interfaces with suppliers (ASNs, purchase orders, price changes)
- Integration ran the spectrum of using middleware (MuleSoft, BizTalk, ERP Connect), file transfers, iDOCs, XML, JSON, web services, push/pull techniques
- Designed an end-to-end process to transfer key material attributes from point of receipt to production. Developed a custom production label to enable a poke yoke transfer of customs data to the custom Production system. A custom utility identified missing customs attributes and automatically blocked the quants from picking
- Collaborated with Integration team on the build of a completely custom Supplier Portal which interfaced with SAP Purchasing
- Supported the deployment of SAP Ariba
- Collaborated on developing a purchase order inbound interface from Coupa
- Designed a powerful 'Flexible Queue Utility' to perform capacity leveling of WM picks with self-service features to easily administer the number of resources, resource capacity, and pick time variables based on product category.
- Designed a pick order sorting algorithm that optimized the material handler's pick path amongst the aisles.
- Co-deployed Plant Maintenance at our largest plant. Covered breakdown, regular, and preventive maintenance.
 - Created shift reports via IW64 automation
 - Placed majority of spare parts on MRP reorder point planning and introduced effective crib management including cycle counting
 - Generated an SAP Query extract consumed by Plant Analytics for an open notification dashboard
 - Rolled out new Warranty and Subcontracting processes
 - Developed a custom availability check that clearly informed the technician how to accurately reflect components on the work order
- Deployed SAP Kanban, integrated with WM, extensively in our two "mega plants". Tailored solution to meet various requirements such as disposable and reusable cards, two step picking, and bulk storage materials. Also prototyped external Kanban.
- Designed and delivered an STO process, driven by MRP (via MRP area), for stock held at 3PL storage locations. The 3PL on WM leveraged reservations; a significant value-added feature for the non-WM 3PL was being able to print and affix SU labels on location.
- Deployed WM to additional plants (Bhiwandi, Kisarazu, Tunis). Each had their own unique challenges (e.g. Japanese language, different sized SU labels).
- Key contributor to the upgrade of ECC 5.0 to 6.0. Wrote test scripts and closely collaborated with customers on the massive testing effort.

SAP Lead Analyst

(2007 – 2012)

As one of the first SAP team hires, I deployed SAP HCM before transitioning to Supply Chain and building out foundational procure-to-pay and make-to-stock processes.

- Co-delivered WM and led key workstreams: training, documentation, conversions and security.
- Fully proficient in all fundamental WM areas including picking/putaway strategies, two step picking, RF queue determination, RF menu design, Zebra form definition and printer integration. Some high value enhancements included:
 - Adjusted TR quantity to equal the partial Kanban pick request due to insufficient stock
 - Automatic queue assignment via RF menu navigation
 - Automation of several two-step picking steps
 - Custom RF transactions for goods receipt, goods issue, and bin-to-bin transfers
 - Custom posting change transaction that combined posting change and putaway

- Integrating Level 1 inspection with goods receipt
- Key contributor to the implementation of MM/IM and MRP at our three largest plants. Rapidly mastered these modules with minimal coaching or training.
- MRP experience with consumption-based planning and external forecasts (MRP types VB, VV and PD).
- Delivered key enhancements in Purchasing such as:
 - Defaulting info record price into purchase requisition
 - Disallowing purchase order save without a prerequisite document release
 - Release strategies built around custom departmental manager approvers
 - Custom table solution for defaulting accounts for indirect PR and automatic account determination for direct PR
- Deployed scheduling agreements for Windsor plant.
- Implemented SAP HCM (PA/OM, Benefits, Compensation Management) with ADP interface. Enabled ESS/MSS scenarios for compensation. Built interface to Resumix recruitment system.

Additional Experience**1997 – 2007***Configured and delivered numerous full lifecycle SAP HCM implementations****Independent Contractor******(2001 – 2007)******Arthur Andersen******(1999 – 2001)******Price Waterhouse******(1997 – 1999)***

EDUCATION

Pennsylvania State University, *Scholars Program***B.S. – Management Information Systems**
