

V Sai Rohit
Software Developer
+1 (940) 758 - 0959
sairohitvelaga@gmail.com

PROFESSIONAL SUMMARY:

- Around **8 years** of experience in all phases of **Software Development Life Cycle** as a **Senior Software Engineer** and **5 years of Appian**, working through Analysis, Design, Development, Testing, Implementation of applications in **BPM-Appian, Middleware Mulesoft**, and web-based n-tier architecture systems.
- Experience in all phases of Software Engineering (**SDLC**), Project management (**Agile & Waterfall/Scrum Methodology**) including Requirement Gathering, analysis, Defining project scope, Design, Coding, App & web server installation, deployment, Manual Testing, and Implementation
- Created **SOAP** Web Services and **REST** and deployed in the web server and also consumed the web service from third party software.
- Handling third party integration such as getting data from external systems and posting data into the existing DataBase applications with different formats (JSON, XML).
- **Deploying** the patches and packages to higher environments and promoting releases.
- Handling the **plugin/module development** and customization based on the requirements using the best practices and guidelines.
- Experienced in performance **optimization** and managing all technical aspects of the existing Applications. Possess excellent analytical and communication skills.
- Extensive hands-on experience with AWS cloud services, including **EC2, S3, RDS, Lambda, and VPC**.
- Expertise in **Linux** system administration, with a deep understanding of its role within AWS environments.
- Proficiency in **Kubernetes** for container orchestration within AWS.
- Advanced knowledge of **Infrastructure as Code**, particularly using Terraform for AWS deployments.
- Strong problem-solving skills with innovative AWS-based solutions. Effective communication skills for collaborating with team members and stakeholders.
- Trained people on technical and functional fronts to enhance team members skills which helped in providing continuous and quality support to client.
- Continuous integration with Mule and Appian, with external Document Repository and application like **FlexiCapture** and other **OCR**.
- Expertise in DevOps tools such as **GIT, Ansible, Chef, Docker, Kubernetes, AWS, Azure** and Terraform.
- Used Google Cloud Foundry build pack to run many JVM-based applications (Grails, Groovy, Java Main, Play Framework, **Spring Boot**, and Servlet) with no additional configuration
- Implemented **AWS** solutions using **EC2, S3** Elastic Load Balancer, Auto-scaling groups and used **AWSSDK** to connect with Amazon SQS for bulk email processing.
- Experience in Developing User Interface (UI) Rich Web Applications using Front End/User Interface (UI) with **Appian** by managing all facets and pipelines of application.
- Experienced in configuring and deploying applications on different servers such as **Apache Tomcat, Web logic, IBM WebSphere**.
- Have good experience and knowledge on different **databases** like **MySQL, DB2, Microsoft SQL Server, NoSQL DB (MongoDB and Cassandra** and good experience in writing **stored procedures, functions and triggers** using **PL/SQL** in **JDBC, ODBC** and in **WebLogic** server.
- Experience of writing **PL/SQL** scripts for executing more than one query at a time. Proficient in creating **views for tables, writing stored procedures, writing Triggers**.
- Experience in working with various version controlling tools like **Git, Bitbuckets** and different Project management tools like **JIRA, Rally, Microsoft Project**.

Certifications :

- **Appian Level 2 – Certified Senior Developer.**
- **Appian Level 1 – Certified Associate Developer.**
- **MuleSoft Integration Associate.**
- **AWS Certified Solutions Architect Associate.**

TECHNICAL SKILLS:

Tools	Appian BPM Suite 17.2 – 22.4, Mulesoft 4 -Anypoint Studio
Languages	C, C++, Java 1.5/1.7/1.8, Python3.6.0, PL/SQL
J2EE Technologies	JSP, Servlets, Struts 1&2, Spring4/5, Spring MVC, Spring Boot, EJB, Hibernate 3.x, JSTL, JMS, Log4j, JDBC, Java Beans, JAX-RS, JAX-WS,
Web Services	SOAP, REST, REST API, Apache CXF
Application/Web Servers	Apache Tomcat 9.x, J-Boss, WebLogic, WebSphere, Apache kafka
Methodologies	Agile, Scrum
Built Tools	Jenkins, Docker, Kubernetes, CI/CD,Azure, Google cloud, PCF
Web Technologies	HTML5, AJAX, XML, Json, JQuery, Java Script ES6, CSS3, AngularJS, Angular6/7, Node JS, ReactJS, JSF, JSTL, DOM, JAXB and JAXP.
IDE Tools	Eclipse, IntelliJ and Net Beans
AWS	EC2, S3
Databases/API	Oracle, SQL, MariaDB, NoSQL, MONGODB, MySQL, MS Access, MS SQL Server
Operating Systems	UNIX/Linux, Windows XP/Vista/7/8
Data Modeling	Microsoft Visio, Rational Rose and UML Design
Versioning Tools	GIT,SVN
Development Tools	Ant, Maven, Junit

PROFESSIONAL EXPERIENCE:

Experience 1

Organization : Zilpin Tech LLC (Farmers Branch, TX)
Tenure : Sep' 2024 - Till Date
Designation : Software Developer

Experience 2

Organization : CARELON GLOBAL SOLUTIONS INDIA LLP (Formerly Legato Health Technologies)
Tenure : Oct' 2021 –Sep' 2022 Rejoined Dec'2022 – Sep' 2024
Designation : Senior Software Engineer

Experience 3

Organization : Conexxia IT Services
Tenure : Sep'2022 – Dec'2022
Designation : APPIAN Developer

Experience 4

Organization : Amazon Development Center
Tenure : May'2019 – Aug'2021
Designation : Senior Software Engineer

Experience 5

Organization : Teleperformance
Tenure : Sep'2017 – May'2019
Designation : Analyst

Experience 6

Organization : CES Limited
Tenure : Nov'2016 – June'2017
Designation : Analyst

PROJECTS :

Client: Carelon (Product)

Dec'2022 – Oct'2024

Role: Senior Software Engineer

Description: AIM application provides clinical solutions that drive appropriate, safe, and affordable care. Serving more than 50 million members across 50 states, D.C. and US territories, it promotes optimal care through use of evidence-based clinical guidelines and real-time decision support for both providers and their patients. The platform delivers significant cost of care savings across an expanding set of clinical domains including radiology, cardiology, oncology, specialty drugs, sleep medicine, musculoskeletal, pain management, and genetic testing.

Responsibilities:

- Responsible for the analysis, documenting the requirements and architecting the application based on **Appian** standards.
- Utilized different **Connected Systems** with **authentications** like **O Auth 2.0, AWS Signature 4.**
- Getting Data from external systems and posting back by consuming services.
- Developed several UI screens making sure to give best User Experience.
- Designed dynamic and browser compatible pages using **Appian** and developed the callback functions to implement asynchronous communication using **regular expressions.**
- Used the Java **Collections API** extensively in the application as security protection for **XML, SOAP, REST and JSON** to make a secure Web Deployment.
- Implemented Java **Message Service (JMS)** to exchange information over reliable channel in an asynchronous way by using **Kafka** as a message queue.
- Involved in developing web pages using **Angular Framework** and familiar with various **Angular** directives and services.
- Design and development of **Microservices** which are deployable in **Azure** cloud servers. Added Excel-Building to download the Tabular data in Excel Format.
- Developing Intranet Web Application using **Embedded Interfaces** to design the user interfaces and **Hibernate** for database connectivity.
- Deploying the applications using **Docker container** services and building **continuous integration (CI)** and **continuous deployment (CD)** pipeline using **Jenkins** with **GitHub.**
- Developed Mean Stack from scratch including **MongoDB** server (Mongoose Connector) setup and **Express JS** server development.
- Utilized **AWS Lambda** platform to upload data into **AWS S3** buckets and to trigger other Lambda functions developed drag and drop document editing using **ReactJS.**
- Built backend **REST API with Spring Boot Microservices** and also Implemented modules into Node JS to integrate with designs and requirement.
- Used **Pivotal Cloud Foundry** to quickly build, deploy & update the applications worked on Pivotal Cloud Foundry to host Cloud based Applications
- Building **RESTful** services using **MicroServices** architecture with tools such as **Spring Boot** designed the new features in the existing application to meet the customer's satisfaction.
- Designed and developed the user interface screens, data base design changes and changes to user access modules.
- Involved in writing **SQL Stored procedures, triggers** and views and **AWS** is used to coordinate and manage the delivery of messages to the subscribers.

Environment: Appian BPM Suite, Mulesoft – Anypoint, Spring Boot, Microservices, SOAP, REST, REST API, MongoDB, Docker, Azure, Oracle 10G, XML, AWS, Eclipse, NoSQL, Apache Tomcat 9.x, Maven, Unix, Linux, Shell, Jenkins, and IntelliJ.

Client: Carelon (Product)

Oct'2021 – Sep'2022

Role: Senior Software Engineer

Description: Lilly is a global pharmaceutical company involved in research, development, and manufacturing of disease management and wellness products. Lilly's products are marketed, sold, and consumed across the globe. On an annual basis, the Lilly Marketing Organization conducts campaigns in order to promote their products and to receive 360 degree feedback from different stakeholders to market their existing products and development of new offerings. Currently, campaign management of the subject campaign is done manually. Such manual process has presented operational challenge considering its global nature of the activity. A Health Care Application catering to the needs of pharmacies and their partner companies. Fully interactive front end for the pharmacies, their clinics, their patients to log into the system and gain access to relevant information.

Responsibilities:

- Creating Process flow in Process Models based upon Business requirement.
- Creating view mapping in CDT and Involved in design of sites and records.
- Worked on query rules, query entity and query records to retrieve data from the database. Worked on writing Perl scripts covering data feed handling, implementing business logic, communicating with web-services through SOAP module and WSDL. Used **Reactive microservices** to embrace asynchronous message passing and maintain mobility utilized **NodeJS, json web token** module to digitally **sign** and **verify** the tokens for **API authentication** mechanism.

- Used **spring dependency injection, annotations and Spring MVC components** to implement business layer and navigation part of application.
- Created and developed deployments, namespaces, Pods, Services, Health checks, and persistent volumes etc., for **Kubernetes** in YAML Language.
- Developed **several REST web services** which produces **both XML and JSON** to perform tasks, leveraged by both web and mobile applications.
- Migrated the code from **Appian 11.2 to 17.4** and followed the strict patterns of implementing model-view-controller (**MVC**) architecture using **Angular6** Framework.
- Extensively used **Google Cloud** resources like Compute Engine, IAM, Google Container Registry, Container Builder and Cloud Storage buckets
- Worked on **REST API** as well as **Node Rest framework** for backend services, used **MongoDB (NoSQL)** for database services.
- Experience in setting up **CI/CD** pipeline integrating various tools with Jenkins to build and run Terraform jobs to create infrastructure.
- Designed Prototype and project layout skeletons using **JQuery and CSS/LESS and HTML5** created database objects like **Stored Procedures**, Tables, Views, Sequences, Cursors, Packages and Triggers.
- Developed several **SOAP based JAX-WS Web Service** interfaces for integrating multiple systems, code re- usability used various **JQuery** and **Bootstrap** plug-in like **date picker, Bootstrap** selectors.
- Wrote **SQL queries, stored procedures** and enhanced performance by running explain plans.
- Used **Java Messaging Services (JMS)** for reliable and asynchronous exchange of important information such as payment status report.

Environment: Appian BPM Suite, Mulesoft – Anypoint, Spring Boot, Microservices, SOAP, REST, REST API, MongoDB, Docker, Azure, Oracle 10G, XML, AWS, Eclipse, NoSQL, Apache Tomcat 9.x, Maven, Unix, Linux, Shell, Jenkins, and IntelliJ.

Client: Amazon (Product) Role:
ML DATA ASSOCIATE

May 2019 – Aug 2021

Description: Deliver high-quality labelled data, using guidelines provided to meet our KPIs, and using in-house tools and software. Report issues with tools and software as and when they occur. Show Ownership and initiative when providing feedback for improvements to existing tooling that can increase the amount and quality of the data we process. Creative thinking, excellent written communication skills and preferred experience in content/blog/article writing. Work with a range of text, speech and other types of data.

Responsibilities:

- Maintain high-quality of **REST** services and implemented **REST web services** using **Spring MVC** and Jersey Requirement Analysis.
- Worked with **Apigee gateway** to Handle the Authentication and Authorization for the **microservices** before the requests reaches APIs.
- Continuous integration with Mule and Appian, with external Document Repository and application like **FlexiCapture** and other **OCR**.
- Developed **SQL Queries**, Stored Procedures and functions for incorporating business logic in **SOAP** accessing the database using **JDBC** and other related info from auto generated files
- Used **JMS** for programs to create, send and receive messages by using different modules like publish-subscribe messaging and point-to-point messaging using **ActiveMQ** Series.
- Involved in **writing EJBs including Session Beans** for database access using WebLogic Server based on user requirements **REST API** and deployed them on **Web Logic** Application server.
- Development of **Hibernate** objects for data fetching for batch and front-end processing worked in Struts Action classes using **Struts controller** component.
- Used **UML** to develop Use case diagram, class diagram and sequence diagrams in **Log4J** for logging the messages to flat files, database and e-mail.
- Developed the assigned modules using various design patterns like Model View Controller, Data Access Object, Business Delegate, Session Façade, Service Locator and Singleton Pattern
- Involved in Distributed components programming on the server side for the communication between clients and server.

Environment: Appian BPM Suite, Mulesoft – Anypoint, Spring Boot, Microservices, SOAP, REST, REST API, MongoDB, Docker, Azure, Oracle 10G, XML, AWS, Eclipse, NoSQL, Apache Tomcat 9.x, Maven, Unix, Linux, Shell, Jenkins, and IntelliJ.

EDUCATION: Bachelor's of Technology in Computer Science Engineering from SSJ Engineering College, India- 2016
