

SAI SANKAR NAGESH. B
Contact No : +1 8483482838
Email: nagesh.career@gmail.com

Professional Summary:

- 20 years of experience in Architecting, Designing, coding, testing and managing distributed, Internet/Intranet, Messaging and Service based Applications on multiple platforms using cutting-edge technologies such as **J2EE, Spring, SOA, Microservices, GCP & Azure Cloud**.
- Worked as a Enterprise/Solution/SOA architect and consultant with major clients **Expedia Group, UHG(OPTUM), Citi Group, HDFC, MOF, Coomeva, TUI Infotech, Hewitt Associates, Pepsico, WestJet, Virgin Blue, Cendant**.
- During the course of experience, have played various roles right from Developer, System Analyst, Tech Lead, Project Lead, Solution Architect, Enterprise Architect and Cloud Architect.
- Extensive expertise of application architectures and integration approaches, and the consultative & leadership skills, building and leading elite teams.
- Experience in application performance testing and analysis of reports, monitoring.
- Experience in migrating applications from legacy to microservices and deploy to cloud based environment which includes private, public, hybrid cloud and on-premise.
- Designing cloud architecture with standards from cloud patterns, 12 Factor principles.
- Experience on RDBMS & N-RDBMS such as **Oracle, DB2, MSSQL and MySQL, MongoDB**.
- Possess skillful implementation EA using **TOGAF** Enterprise
- Experience in delivering largescale applications using Agile/scrum models and having good meeting management and conflict resolution skills.
- Advanced levels of technical knowledge combined with sound business vision and project management skills.
- Sun Certified Java Professional
- Experience to working with C level executives, LOB Heads, Vendors, Partners to align business goals.
- Having onsite experience, client meetings for requirement analysis, project proposal and architecture design.

Education:

Master of Science in Computer Science from Andhra University, Vishakhapatnam, India.
Bachelors in Computer Science from Andhra University, Vishakhapatnam, India.

TECHNICAL SKILLS:

Technologies : Java, JSP, Servlets, JDBC, EJB2.0, Web services REST, Service Oriented Architecture (SOA), Microservices, Cloud - Azure, AWS, Kubernetes, HTML, XML, JSON, JavaScript, Ajax, JQuery. Node.js, Angular JS, Spring, Spring Boot, Struts, Hibernate, iBatis, Oracle Toplink 9.2, Junit, Log4J, Oracle 9i/10g, HSQL, MySql, MSSQL, MongoDB, JBoss, Tomcat, Weblogic, Websphere, JBoss Developer Studio, Eclipse, Spring STS, RAD 7.5, IntelliJ 6, DevOps – Spinnaker pipeline, Git, Tortoise SVN, CM Synergy, MS Visual source safe, Ant, Maven, Jenkins, XL Deploy, XL Release, Windows, LINUX, Solaris, MS Visio, Rational Rose, Rational Software Architect (RSA), Optimize IT (Profiling tool), EMMA CodeCoverage, QA Load, TOAD, DB Visualizer, CA LISA, Mule ESB, Grafana, Prometheus, Splunk, Agile Modeling, SCRUM, Grafana, Prometheus, Redis, Docker hub, Kafka, Rabbit MQ.

PROFESSIONAL EXPERIENCE:

Duration: Sep2024 – Mar2025

Company : Expedia Group, Seattle, WA

Domain: Travel

Role : Java Architect

Project : FDS (Financial Data Store)

Roles & Responsibilities:

- Define and design scalable, secure, and high-performance architectures for FDS.
- Develop end-to-end system architectures, including multi-tier, microservices, and cloud-native solutions.
- Design and implementation of dashboards and reports of data completeness and analytics statistics using apache superset and Tableau.
- Evaluate and select appropriate technologies, frameworks, and tools for development.
- Provide strategic guidance on adopting emerging technologies like Kubernetes, Docker, Kafka tools.
- Design and POC of Migration from oracle to PostgreSQL database.
- Establish and enforce coding standards, architectural principles, and best practices across teams.
- Ensure alignment with design patterns, such as MVC, DAO, and microservices principles.
- Provide technical guidance to developers on complex programming challenges and architectural decisions.
- Oversee code reviews to ensure adherence to best practices and standards.
- Identify and resolve bottlenecks at the application, database, or system level.
- Collaborate with business stakeholders to translate requirements into technical solutions.
- Act as a bridge between business needs and the technical team, ensuring alignment on deliverables.
- Lead and mentor development teams, fostering skill enhancement and knowledge sharing.
- Design solutions that integrate seamlessly with third-party systems, APIs, and existing infrastructure.
- Design and deploy cloud-based architectures on AWS for scalability and resilience.
- Lead initiatives to modernize legacy systems and migrate to modern architectures.

Technical Environment:

Java, Spring Boot, hibernate, REST APIs, Postgres SQL, Oracle, MongoDB, Kafka, AWS, Git, Spinnaker pipeline, Apache Superset.

Duration: 02Aug2021 – 09Jul2024

Company : Kyndryl Solutions Pvt Ltd, Hyderabad – INDIA

Domain: Infrastructure Management

Role : Solution Architect

Project : Resiliency Orchestration (Disaster Recovery Management)

Roles & Responsibilities:

- Responsible for building state of the art software and services for providing resiliency solutions to Kyndryl enterprise customers.
- be part of the product architecture team responsible for architecture & design of the Resiliency product suite and services built on top.
- Responsible for designing the architecture, help the engineering teams with the best approach and design for developing and integrating the various clouds, hypervisors and data platforms into Unified Resiliency Platform and transforming the orchestration platform to become cloud native.
- Ownership of the architecture of the resiliency suite including the product, platform, services, integration and deployment

- Designed and developed quick Proof of Concepts (POCs) to validate technical feasibility and business requirements using Java/J2EE, TCL scripting, Ansible, python, open source technologies like Apache, Kubernetes, Azure, etc.
- Propose suitable architecture & design and build proof of concept implementations
- Led the modernization of legacy applications by implementing Microservices architecture using Java Spring Boot, enhancing scalability and maintainability.
- Optimizing application performance by designing load-balanced architectures with cloud-based autoscaling capabilities.
- Guide and work with the development team in defining approach, software design and code reviews.
- Publish architecture documents for features and solutions
- Assist the QA team in defining test strategy and test scenarios.

Technical Environment:

Java, Spring, hibernate, REST APIs, Python, TCL Scripts, Vmware, MariaDB, Azure, Git, Jenkins.

Duration: Dec 2017 – Jul 2021

Company : Optum (United Health Group Pvt Ltd), Hyderabad – INDIA

Domain: Healthcare

Role : Cloud Solution Architect | *Optum – OSFI Architecture*

Project: OSFI (Architecture consultation team)

Roles & Responsibilities:

- Analyze and design a solution for migrating legacy applications by implementing Microservices architecture onto Optum cloud environments.
- Designed and developed Microservices to decompose monolithic applications, resulting in improved performance and easier deployment cycles.
- Adopted containerization tools like Docker and orchestration platforms such as Kubernetes to deploy and manage Microservices, ensuring efficient resource utilization and scalability.
- Driving decisions collaboratively, resolving conflicts and ensuring follow through
- As part of Sprint 0 team, involve in planning, Design future state architecture proposals and strategies for cloud migration.
- Develop/capture/document architectural best practices for building systems on Openshift.
- Provide solutions meeting the customer expectations in terms of High-Availability, Fault Tolerance, Scalability, Database Concepts, System and Software Architecture, Security, IT Infrastructure, Virtualization, and Internet Technologies.
- Presented POC demonstrations to diverse project stakeholders, including business analysts, product managers, and technical teams, showcasing potential solutions and gathering feedback.
- Incorporated stakeholder input into POC iterations, refining prototypes to meet evolving requirements.
- Explored and integrated cutting-edge technologies into POCs, evaluating their impact on scalability, performance, and user experience.
- Leveraging Azure services (e.g., Azure Functions, Azure SQL) or Google Cloud Platform tools (e.g., BigQuery, GKE) for deploying scalable and cost-efficient solutions.
- Work closely with product management in understanding the business requirement and provide inputs on technical feasibility and approach
- Implementing identity and access management (IAM) for unified security across hybrid systems, using Azure AD.
- Documenting and sharing technical best practices / insights with engineering and the architect community
- Integrated CI/CD pipelines using Jenkins, Maven, and Git to automate the build, test, and deployment processes for Microservices, significantly accelerating development cycles.

- Utilized monitoring and logging tools such as Prometheus, Grafana, and Splunk to ensure real-time visibility and proactive issue resolution for Microservices.
- Proven track record of driving decisions collaboratively, resolving conflicts and ensuring follow through
- Collaborated with cross-functional teams to gather requirements, design solutions, and ensure seamless integration of Microservices into the overall application ecosystem.

Technical Environment: Optum Openshift platform, Kubernetes, Jenkins, XL Deploy, XL Release, Docker image, Tools/FWs like Nginx, Kong etc, Grafana, Kafka, Prometheus etc.

Duration: Oct 2016 – Nov 2017

Company: Optum (United Health Group Pvt Ltd), Hyderabad – INDIA

Domain: Healthcare

Role : Enterprise Architect | *Optum – OGS Architecture*

Project : ADRP for e-FAST

Roles & Responsibilities:

- Take lead architecture role in evaluating, analyzing and auditing of eFAST based projects.
- Review compare and identifying the gaps in the current architecture to that of target architecture.
- Outline current and future vision enterprise architecture solution, including traceability from business and IT strategies to suggested technologies where applicable.
- Led the modernization of legacy applications by implementing Microservices architecture using Java Spring Boot, enhancing scalability and maintainability.
- Implemented RESTful APIs using Spring Boot, facilitating seamless communication between Microservices and external systems.
- Coordinate with architects and business experts across eFAST to translate key strategic objectives into actionable and governable roadmaps and designs.
- Provided technical leadership and mentorship to junior developers on best practices in Microservices architecture and Spring Boot development.
- Conducted performance testing and tuning to identify and resolve bottlenecks, ensuring optimal performance of Microservices under high load conditions.
- Analyze business and technology challenges, assess costs, and suggest solutions.
- Preparing design of score card evaluation document for review process.
- Develop artifacts for architecture and design review process. Conducting interviews with team to review project design and architecture.
- Review the documented technical requirements and design technical solutions utilizing enterprise architecture standards including documenting all solution components and configurations.
- Developed comprehensive documentation for Microservices architecture, design patterns, and best practices to facilitate knowledge sharing and onboarding.
- Identify where exceptions to the enterprise architecture standards are required.
- Present the observations and results of the evaluation to the Stack holders.

Technical Environment: MS Excel, MS PPT, UML, MS Visio, Azure Cloud (Network, Storage, Compute, Security, Analytics, DB), Docker, Kubernetes.

Duration: Oct 2015 – Aug 2016

Company : Optum (United Health Group Pvt Ltd), Hyderabad – INDIA

Domain: Healthcare

Role : System Architect | *Optum- OGS Architecture*

Project : UHOne 2.0

Roles & Responsibilities:

- Lead solution architecture role in dealing with client requirements and design the architecture.
- Conducting architectural evaluation, design and analysis of enterprise wide systems throughout UHOne.

- Stimulate apt design discipline leverage industry strength evaluation and design tools like Mule ESB and Talend ETL.
- Ensure application architecture team delivers robust system solution to architect business
- Designed and developed Microservices to decompose monolithic applications, resulting in improved performance and easier deployment cycles.
- Develop, enhance and maintain established service design procedure and process to assure apt and robust service design. Design and development of Mule framework reusable components.
- Coordinate closely with Enterprise Architect within Architecture Services team to assure constant compliance of UHOne.
- Perform as member of high performance and provide solutions alert architecture team supporting business oriented project development effort.
- Implemented RESTful APIs using Spring Boot, facilitating seamless communication between Microservices and external systems.
- Ensure to test assistance to storage solution development.
- Prepare and presentation test plan, technical presentations, analysis briefings, white papers for different solution areas.
- Providing ongoing suggestions and best practices for entire application solutions across business continuity, backup, recovery, high availability and archiving process.
- Collaborate with IT development team to assure architectural solution could be suitably translated into effectual and robust implementation.
- Identify customer requirements, analyze alternatives and conduct product recommendations related to software, platform and network configurations.

Technical Environment: Java, J2EE, Mule ESB, Talend ETL, MSSQL Server DB, MS PPT, UML, MS Visio.

Duration: Apr 2010 – Sep 2015

Company :Optum (United Health Group Pvt Ltd), Hyderabad – INDIA

Domain: Healthcare

Role : Project Tech Lead

Projects: Optum Cloud Practices - Testharness, Secure Messaging API, Communication Center, Optum Cloud Portal,
Optum Rx - FirstLine Medical Microsite(FLM), Real Time Audit (RTA).

Responsibilities:

- Lead role in dealing with client requirements, program managers and IT team.
- Translate business requirements into detailed architectures and designs.
- Document all technical requirements and design technical solutions utilizing enterprise architecture standards including documenting all solution components and configurations.
- Develop solution cost structure by identifying all cost points including labour, software and hardware.
- Maintain Rally with Agile activities for team, to create user stories, split into tasks and assign to team. Tracking, updating Rally and conducting regular scrum meetings.
- Review the documented technical requirements and design technical solutions utilizing enterprise architecture standards including documenting all solution components and configurations
- Implement architectural designs while building solid relationships with stakeholders at all levels.
- Work with functional analysts, developers and development managers to ensure that all solutions are deployed within agreed timelines and supported after delivery.
- Managing user access and permissions using Role-Based Access Control (RBAC) and NTFS file system permissions.
- Monitoring system health and security through tools like Windows Defender ATP and Event Viewer.
- Identify where exceptions to the enterprise architecture standards are required
- Support and mentor junior developers.

Technical Environment: Java, JSP, JavaScript, JQuery, JBoss, MySQL, Junit, Git, Jenkins

Duration: Sep 2007 – Mar 2010

Company: Sonata Software Pvt Ltd, Hyderabad – INDIA.

Domain: TTL

Role : **Technical Lead**

Projects: Platforms – TUI InfoTech, Catering Exchange Portal (CXP)

Responsibilities:

- Lead team of developers in the delivery of technical systems and components
- Ensured on-time, quality release of systems and components
- Provided technical direction to development teams. Code reviews ensuring quality in deliverables.
- Provided IP management leadership and oversight of the software development process.
- Maintaining quality artifacts and handling quality audits.
- Oversaw design of applications from functional and technical specifications
- Recommended and assisted with development of standards and project frameworks and provided guidance to vendors.
- Worked with Solutions Architect to ensure smooth translation of requirements into software applications.
- Worked closely with business stakeholders to determine product prototypes.
- Integration of modules, Bug Tracking and fixing.

Technical Environment: Java, Struts 1.3, Spring, Oracle Toplink 9.2, Apache Tomcat, Oracle 9i.

Duration: Jun 2006– Aug 2007

Company: **Covansys India Pvt Ltd(A CSC Company)**, Chennai – INDIA.

Domains: HRMS, Banking

Roles : **Sr Java Developer**

Projects: 1. Project Initiation Forum (PIF) / **Client** – CitiGroup IT Operations & Solutions Ltd., USA
2. HRMS 6.x / **Client** - Hewitt Lincolnshire IL, USA

Technical Environment: Java, JSP, Servlets, Struts1.2, DB2, Apache Tomcat Server, IBM Websphere application Server(WAS), SOAP, REST WebServices.

Duration: Apr 2005– May 2006

Company: **IBS Software Services (P) Ltd**, Trivandrum – INDIA

Domain: TTL

Roles : **System Analyst**

Projects: aiRes (New Generation Airline Reservation System) / **Clients** - WestJet, Cendant and Virgin Blue.

Technical Environment: JSP, Struts, JDBC, & EJB2.0, WebLogic8.1, Oracle Database, QA Load (Load & perf Testing), RAD.

Duration: Jan 2004– Mar 2005

Company: **Access Automation Pvt Ltd**, Bengaluru – INDIA.

Domain: HRMS

Roles : **Software Engineer**

Projects: e-Jyopa / **Client** – Jyopa Connexions, Bengaluru.

Technical Environment: Java/J2ee, JSP, XML, Java Script, CSS, MySQL, Struts and Hibernate Framework, Apache Tomcat.
