

SAI NIKHIL

[Sr. Java Full Stack Developer]

Mobile: 214-945-3575

Email: sainikhil.sai1995@gmail.com

PROFESSIONAL SUMMARY

- 9+ years of programming and enterprise-level application development experience including software information strategy planning, requirement analysis and prototyping, design, development, testing, debugging, performance tuning and production support.
- Strong knowledge in Object Oriented Concepts, Object Oriented Design (OOD), Object Oriented Analysis (OOA), Programming and its implementation.
- Worked on Java Dependency Analysis Tool (JDevs) on Java 8.
- Worked on JAR file attributes on Java 8.
- Responsible for building a framework to support the easy creation of, and the consumption of REST Microservices using Java 8, JAX-RS, AngularJS (SPA), Spring.
- Expertise in design and development of various web- and enterprise-level applications using J2EE technologies like JSP, Servlets, JDBC, Oracle.
- Have hands-on experience in implementing data analytics and big data solutions leveraging Azure/AWS/Google clouds, Hortonworks, Cloudera-CDH, SparkSQL, Spark Streaming and Kafka
- Proficient in developing Microservice architectures, integrating Kafka for real-time messaging, and optimizing application performance.
- Skilled in building scalable applications and automating tests for high-quality deployments.
- Working knowledge with cloud computing such as AWS EC2, and Microservice container deployment in Docker.
- Good experience in Shell Scripting, SQL Server, Unix and Linux, Open stack and Expertise python scripting with focus on DevOps tools, CI/CD and AWS Cloud Architecture.
- Expert in Technical skills encompass Web services (SOAP, RESTFUL), ORM, XML, JSON, HTML 5.0, DHTMLX, UML, ANT, JSTL Apache Log4J, Shell script, AngularJS, NodeJS, Maven, Java Script.
- Build highly available content distribution sites by using CI/CD tools like Chef, Ansible, Docker, Maven, Jenkins, Jira, Kubernetes etc.
- In-depth experience with J2EE Technology, Spring MVC, Spring AOP, SpringSecurity, Spring Boot, Maven, JDBC/Hibernate, and JPA.
- Strong foundation in Object Oriented Programming (OOP) and experienced in Core Java, Collections, Threading, I/O, Generics, and Data Structures.
- Utilized Java 8 features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- Designing and developing the UI with Thymeleaf, JSP, HTML5, CSS3, AngularJS, and JavaScript.
- Design and develop web services using RAML and REST
- Experience in using Java IDE tools like Net beans and familiarity with other IDEs such as Eclipse.
- Experience on Solace messaging appliance administration and development.
- Extensive experience in using SQL to write Stored Procedures and Triggers.
- Well versed with complete systems life cycle development processes of design, development, testing and implementation.
- Developed web applications by implementing Model View Control (MVC) architecture using JSP pages that interact with Servlets.
- Excellent communication, interpersonal and analytical skills along with a can-do attitude.

TECHNICAL SKILLS

Programming Languages	Java 11, Core Java, Python, C, SQL.
Software Methodologies	Agile, Scrum, SDLC Waterfall.
J2EE Technologies	Java Beans XSD, JAX-RS, JAX-WS, SOAP, WSDL.
Web Technologies	HTML, JavaScript, AJAX, Bootstrap, JSON, Angular, React JS, Kubernetes.

Web service Frameworks	Spring 4.3, Hibernate 4.3, Struts (2.5/2.3), Spring MVC, Spring IOC, Spring Boot, Spring AOP, Kafka
Web Services	SOAP
Testing Tools/Others	Junit, Mockito, Log4J, Postman.
Technologies/Tools	AWS, EC2, Azure, Docker, JIRA
Build Tools	Maven 3.3.9, Ant 1.10, Grade 3.4.1, Jenkins
Version Control Tools	GIT, GITHUB 2.12.0, SVN, Bit Bucket.
Application/Web Servers	Web Logic Server 12c, Apache Tomcat (8.5/8.0), Apache HTTP Server, Joss.
IDE Tools	Spring Tool Suite 3.8.3, Eclipse, IntelliJ IDEA 2017.1, Net Beans, Visual Studio.
Operating Systems	Windows, Linux, Unix, Mac OS

PROFESSIONAL EXPERIENCE

Client: Chevron Corp, Houston, TX | Nov 2023 – Present

Role: Sr. Full stack Java Developer

Responsibilities

- Worked in agile framework as an individual contributor Responsibilities include - Interaction with Business team in story grooming, reviewing story/acceptance criteria.
- Implemented Subscription CRUD operations end points, Cart controller and REST API endpoints like Subscription Details, Discounts, User Package and all other Subscription operations.
- Design and develop Point of Sale (POS) and Back Office cloud-based applications using Java 11, JSF, Spring, REST, Applications provide high-end retailers point-of-sale, pricing, merchandising with real-time inventory and sales, scheduled and on-demand reporting.
- Handled large data set (file and data in database) using multi-threading and Used MAVEN as a build tools on java projects for the development of build artefacts on the source code.
- Designing and Developing the Web Portal Applications, web services, JBPM workflows, back end Queuing implementations (MQ) using the technologies Spring MVC, Spring Boot, jQuery.
- Implemented to reprocess the failure messages in Kafka using offset id.
- Implemented Kafka producer and consumer applications on Kafka cluster setup with help of Zookeeper.
- Used Spring Kafka API calls to process the messages smoothly on Kafka Cluster setup.
- Use Scrum/Agile framework to perform hands-on development and deployment using RESTFUL APIs in creating big data processing pipelines leveraging Azure data bricks and stream analytics.
- Enabled streams and created Azure functions to trigger changes made in DynamoDB and used GitHub and Jenkins for building the CI/ CD pipeline and day to day builds and deployments using Gradle.
- Developed and optimized Microservice architecture using Spring Boot and integrated Kafka for event-driven messaging systems.
- Implemented and maintained Kafka message parsers, ensuring smooth communication between distributed systems.
- Worked with Oracle and Cassandra databases to manage large-scale data processing and storage solutions.
- Developed RESTful APIs using Java Spring Boot while integrating Python-based machine learning models for predictive analytics
- Developed story/task by following TDD and Pair programming concepts. Providing daily status in scrum meetings with the client. Mentored new team members on effective usage of blend of Spring Boot /JPA and Java
- Used GIT for branching and merging of source code management.
- Hands-on experience in using CI/CD pipeline and Jenkins for deploying the code.
- Work in a fast paced bi-weekly sprint environment following Agile/Scrum principles and methodologies.

Environment: Java 1.8, Restful web Services (JERSEY, Spring Boot), PCF, Zipkins, Hystrix, Spring Config server, HTML, JSON, Log4j, Gradle, Git, Junit, Pivotal Tracker, Golang, Tomcat 7, Oracle 9i, MySQL, DB2, Jenkins, Jacoco, Jenkins, Docker, SonarQube

Client: Green Sky Inc, Atlanta, GA. | Feb 2022 to Nov 2023

Role: Sr. Full Stack Java Developer

Responsibilities

- Used Spring Dependency Injection, spring application context features in the application also Implemented Spring based MVC, AOP framework and hibernate to access the database.

- Implemented Spring boot microservices to process the messages into the Kafka cluster setup.
- Implemented partition and compression strategy for the Big Data in HDFS based upon the file frequency and data size.
- Worked as Onshore lead to gather business requirements and guided the offshore team in a timely fashion.
- Closely worked with the Kafka Admin team to set up Kafka cluster setup on the QA and Production environments.
- Contributed to the DevOps to automate the build and deployment process using Jenkins, shell scripting, chef, Python, Azure Lambda, Cloud Formation Template, Terraform.
- Implemented a data pipeline using Python for ETL processing, seamlessly integrating with a Java-based microservices architecture.
- Implemented Data Warehousing Methodologies for ETL using Informatica Designer, Repository Manager, Workflow Manager, Workflow Monitor, Repository Server Administration Console.
- Worked with Docker and Kubernetes on multiple cloud providers, from helping developers build and containerize their application (CI/ CD) pipelines to deploying either on public or private cloud.
- Configured Docker container service and built pipeline Jenkins CI/ CD tool for continuous integrating and deploying applications on servers.
- Initiated Microservices application with Docker and Kubernetes cluster formation for the scalability of the application.
- Managed local deployments in Kubernetes, creating local clusters and deploying application containers and working with Jenkins, CI/ CD pipeline to integrate and deploy the code into the PCF Server.
- Designed and executed test cases using TestNG Selenium with WebDriver and reported defects.
- Involved in development of Java components by using Hibernate and spring to persist the data in PostgreSQL database.
- Used Java spring JPA with Hibernate to integrate MySQL into backend applications and performed CRUD and aggregation operations on databases.
- Created entities and mapped them to a database using Hibernate and realized CRUD operations using Hibernate.
- Used MySQL for storing the data and extensively used SQL queries along with stored procedures and functions for queries and data analysis.
- Used Winscp, Putty to monitor logs and SIT, UAT application deployments
- Used AngularJS to address many of the challenges encountered in developing single page applications.
- Used Java 8 Streams and Lambda expressions extensively for building the APIs.

Environment: Java 8, J2EE, Spring, Hibernate, AngularJS, Golang, log4j, Maven, Junit, TestNg, Git, GitHub, Tomcat, Eclipse.

Client: HCA, Nashville, TN. | Sep 2020 to Feb 2022

Role: Java Developer

Responsibilities

- Worked in big data ingestion using streaming tools like Flume, Sloop, Kafka, and Storm.
- Worked on various use cases in development using Struts and testing the functionalities.
- Involved in preparing the High Level and Detail level design of the system using J2EE.
- Created struts form beans, action classes, JSPs following Struts framework standards.
- Implemented the database connectivity using JDBC with Oracle 9i database as backend.
- Involved in the development of model, library, struts and form classes (MVC).
- Used display tag libraries for decoration & used display tables for reports and grid designs.
- Used TDD methods for writing the failing test and making the necessary corrections and refactoring the code.
- Worked on core java, using file operations to read system files to present on JSP.
- Worked with supply chain domain for creation and delivery of a product service and also for providing logistics and customer service.
- Involved in the development of underwriting process, which involves communications without side systems using IBM MQ and JMS.
- Involved in the design and estimation of the various templates, components that were developed using Day CMS (Communique).
- Used Java 8 version for enhancements, lambda expression, date and Time API.
- Worked in key supply chain domains like sourcing, procurement and logistics.
- The CMS and Server-side interaction was developed using Web services and exposed to the CMS using JSON and JQuery.
- Used PL/SQL stored procedures for applications that needed to execute as part of a scheduling mechanism.

- Designed and developed Application based on Struts Framework using MVC design pattern.
- Developed Struts Action classes using Struts controller component.
- Used SAX XML API to parse the XML and populate the values for a bean.
- Used Jasper to generate rich content reports.
- Provided troubleshooting and error handling support in multiple projects.

Environment: Flex, EJB, spring, JSP1.2, Servlets2.1, Jasper reports, JMS, Scala, IBM MQ, XML, SOAP, Apache Tomcat, Clear Case, Log4J, ANT, Hadoop, Scala, Hive, Kafka, JUnit, Eclipse, UDDI, WSDL, JDBC, JNDI, Rational Rose 98, Oracle 10g, XSLT, XML, UML, HTML.

Client: Wells Fargo, Charlotte, NC | Oct 2019 to Aug 2020

Role: Full stack Java Developer

Responsibilities

- Designed and developed user interfaces that received positive feedback from the warehouse operatives, leading to increased user satisfaction.
- Spring framework is used to implement Inversion of Control (IOC) and Model View Controller (MVC)
- Worked extensively on Web Services (SOAP & REST), XML, JMS and Spring Controller.
- Actively involved in designing and implementing Business Delegate, Data Access Object.
- Extensively used Java Collections framework for backend services and to display views on frontend.
- Developed reusable custom directives using Angular.JS using transclude, restrict, event handlers and templating.
- Installation and configuration of the Development Environment using Eclipse with the JBoss Application server.
- Hands-on experience in mapping tools like Hibernate (Hibernate Connection Pooling, HQL, Hibernate Caching, Transactions).
- Developed several modules using Spring MVC- Created Controllers, Services, used Dependency Injection feature for bean wiring.
- Developed Maven based project structure having data layer, ORM, and Web module.
- Used MongoDB to run the reports and query the database for low latency and fast accessing.
- Developed and consumed REST web services to retrieve data from different applications.
- Design of REST APIs that allow sophisticated, effective and low-cost application integrations.
- Used JUnit to test the application with Mockito and Power Mocks.

Environment: Spring Core, Spring MVC, Spring security, Java 8.0, Design Patterns, RESTful API, Web Services, JSON, Maven, Jenkins, WinSCP, Putty, Junit, Spring Web flow

Client: Sky Bridge Global Pvt. Ltd, India. | July 2016—Sep 2019

Role: Java Developer

Responsibilities

- Involved in Analysis, Design, and Implementation/translation of Business User requirements.
- Design and development of data enrichment business process objects using Rete based in-house rule engine framework
- Integrated the application with custom in-house GEMS and Netting frameworks
- Used Reference Data cache to load frequently used data into memory to avoid redundant database reads.
- Design and development of Template Remediation for regulatory reporting.
- Design and development of DAO's using Hibernate, JDBC, SQL and PL/SQL
- Design and development of operational data validation reports using JSP, Struts, HTML, JavaScript, AJAX
- Used design patterns like DAO, DTO, Singleton and Business Delegate, Chain of responsibility.
- Used in-house control framework of GEMS to enable multithreaded processing, resume on failure and tracking of batch job progress.
- Experience in developing applications using C# and the .NET framework.
- Familiarity with the C# standard library and its core classes and namespaces.
- Knowledge of C# development tools and environments, such as Visual Studio or Visual Studio Code.
- batch process workflow using XML and Java for Control-M
- Used PKI to provide single sign on based authentication and Securest based framework for
- authorization for the web application

- Used Slot id-based table partitioning for partition strategy of high-volume data tables.
- Involved in writing SQL queries, stored procedures, and invoking them from Components.
- Design and Implemented development of ARTS balance sheet and MIS Drill Down Reports
- Involved in the unit testing the application using JUnit. Unit tested the changes and performed the code review.
- Performed joint system testing the application that involved other downstream systems.

Environment: Linux, Java 1.4, Oracle 10g, WebLogic 10.1, Eclipse, Apache POI, Log4j, Core Java, JDBC, JNDI, J2EE, Java Beans, Servlets, Multithreading, JUnit, DOM, SQL, PL/SQL, Hibernate 2.0, vi, SVN, Windows-XP, HP QC, Weblogic 10.0.3, SVN, Git.
