PROFESSIONAL SUMMARY

Results-driven Java Developer with over 5 years of experience in designing, developing, and deploying scalable web applications and microservices. Proficient in Java, Spring Boot, RESTful APIs, and Angular, with expertise in integrating modern tools like Docker, Kubernetes, and Apache Kafka. Adept at optimizing system performance, implementing CI/CD pipelines, and leveraging cloud platforms like AWS and Azure. Demonstrates a strong command of Agile methodologies and a proven ability to lead projects through the entire software development lifecycle. Experienced in unit testing, code quality assurance, and team collaboration, delivering high-quality, robust solutions for enterprise environments.

SKILLS

Languages/Database: Java/J2EE, Python, JavaScript, TypeScript, C#, C++, SQL, MySQL, NoSQL, Postgres, MongoDB, Elasticsearch

Frameworks/Tools: Struts, Nodejs, Spring Boot, React, AngularJS, Hibernate, Hadoop, Spark, Airflow, Git, Linux

ML/Gen AI Frameworks: Pandas, NumPy, Scikit-learn, Matplotlib, TensorFlow, NLTK, PyTorch, Langchain, OpenAI

Cloud Services: Amazon Web Services (AWS), Azure, GCP

Java Enterprise API: Servlets, JSP, EJB, JMS, JDBC, Java Multithreading, Web services

Software Engineering: UML, Design Patterns, OOPs, Service Oriented Architecture, TDD, Scrum and Agile methodologies

XML technologies: XML, DTD, SAX, DOM, SOAP, WSDL, XPath

Application Servers: Apache Tomcat, Apache Camel, JBoss, WebLogic, IBM WebSphere

Security & Authentication: OAuth, JWT, SSL/TLS, API Gateway security

IDEs & Tools: GIT, JIRA, Maven, STS, IntelliJ, Eclipse, NetBeans, Junit, Mockito, Log4j, Soap UI, Bit-bucket, CVS, MS Visio, Putty, SVN

DevOps Tools: Jenkins, Docker, Openshift, Harness, Azure DevOps, Kubernetes, SonarQube, CI/CD

EXPERIENCE

Java Developer | Southwest Airlines (Dallas, TX)

June 2023 - Present

Java, Spring boot, RESTful APIs, Terraform, Docker, Kubernetes, Apache Kafka, IBM MQ, Apache Spark, SQL, Azure Cloud, CI/CD, Prometheus, Grafana, Automation

- Analyzed, defined, designed, implemented, and deployed the full software development lifecycle for projects using Agile methodology, incorporating ATDD with Cucumber and defect tracking via Version One.
- Designed robust backend services using Spring Boot, Spring Data JPA, RESTful APIs, and integrated microservices with databases like MongoDB and Oracle to ensure scalability and maintainability.
- Developed RESTful APIs secured with OAuth2, implemented microservices architecture, and utilized Docker and Kubernetes for containerization, scaling, and orchestration of Java applications.
- Leveraged Apache Kafka for message streaming, IBM MQ for reliable message queuing, Apache Spark with Scala for optimized data processing, and Spark SQL for high-performance analytics and querying.
- Engineered solutions with distributed tracing using OpenTelemetry and performance testing to optimize application latency.
- Secured RESTful APIs with OAuth2, JWT authentication, and API Gateway integration.
- Automated CI/CD pipelines using Jenkins, GitLab, and Openshift, integrated Kubernetes for seamless deployments, and monitored distributed systems using Prometheus and Grafana for system health.
- Implemented Infrastructure as Code with Terraform, with capability to adapt to tools like Chef and Ansible.
- Conducted unit testing with JUnit, Mockito, and PowerMockito, achieving high code coverage, and ensured code quality using SonarQube, HP Fortify, and coverage reports with Cobertura and JaCoCo.
- Created Helm charts for deploying Java microservices on Kubernetes clusters, optimized configurations, managed secrets, and automated provisioning using ConfigMaps and Azure Kubernetes Service (AKS).
- Implemented messaging solutions using IBM MQ for asynchronous communication between microservices, ensuring high reliability and fault tolerance.
- Configured Kubernetes clusters for rolling updates, auto scaling, and optimized resource allocation while monitoring applications using AWS CloudWatch and Kubernetes Dashboards.
- Participated in weekly design reviews, created UML diagrams for object-oriented designs, and collaborated with teams to ensure alignment with project objectives and deliverables.

Java Developer | HCA Healthcare

January 2021 - August 2022

Angular, Java, Spring Boot, RESTful APIs, Apache Kafka, Apache Spark, Docker, Jenkins, Mesos, CI/CD, Selenium, AWS, Drools, SQL

- Developed fully encapsulated UI components with Angular, leveraging features like interpolation, event binding, router-outlet directives, and shadow DOM for creating dynamic and interactive SPAs.
- Architected SPAs using Angular, TypeScript, Bootstrap, and Angular CLI, implementing module-wide routing with Angular Router and configuring route guards to enhance navigation security.
- Designed and implemented AWS S3 integration to optimize server-side logic for faster UI rendering, enabling seamless file writing and retrieval for enhanced performance.
- Built Spring Boot microservices for payment processing with Spring Data JPA, Apache Kafka, Cassandra DB, and Spark, publishing processed transactions securely to Kafka Topics.
- Used Spark SQL for feature extraction and handling incomplete datasets, and integrated Drools for business logic workflows with rule creation, sessions, and activations.

- Implemented infrastructure as code (IaC) using Terraform to provision AWS services, streamlining cloud resource management.
- Automated builds using GitHub webhooks and Jenkins, configured Poll SCM jobs, and authored shell scripts for environment setup with Docker files and JSON configurations.
- Implemented secure API authentication and authorization using OAuth, JWT, and API Gateway.
- Designed and integrated event-driven messaging systems with Kafka for real-time data streaming.
- Deployed components on Mesos, conducted smoke testing with Marathon, Spark Mesos, and Docker, and automated Docker image integration into Jenkins pipelines for CI/CD.
- Integrated Generative AI models for natural language processing and data augmentation, enhancing system capabilities.
- Built containerized applications using Kubernetes, OpenShift, and automated CI/CD pipelines with Harness and Tecton.
- Performed extensive unit testing with Jasmine, Karma, JUnit, and Mockito, achieving 90% code coverage, and debugged using Chrome Inspector and Selenium for distributed environments.
- Ensured code quality and security using SonarQube, HP Fortify, and CLM for vulnerability assessments, generating reports with Cobertura and JaCoCo during Maven builds.
- Participated in weekly design reviews, collaborating with project managers and teams to align on objectives, address feedback, and ensure seamless project execution.

Software Engineer | US Bank

January 2019 - January 2021

React, Python, Java, JavaScript, RESTful APIs, Microservices, IBM MQ, Cloud Computing, SQL, Penetration Testing, Automation

- Applied Agile methodology in iterative application development, managing 2-week sprints, daily stand-ups, backlog reviews, sprint planning, retrospective meetings, and story estimation for efficient delivery.
- Collaborated with business and technical teams, documenting functional and technical specifications during the business requirements analysis phase to ensure accurate project implementation.
- Built a Java/J2EE web application with the Spring suite, utilizing Spring MVC, Hibernate ORM, and Spring ORM for robust.
- Developed dynamic front-end pages using react with JSP, JSTL, CSS, JavaScript, and Bootstrap, incorporating AngularJS for creating single-page applications with responsive design.
- Developed RESTful APIs and backend services using Python and Django, implementing authentication, data processing, and API integration for web applications.
- Leveraged core Java features like multithreading, collections, file I/O, and concurrency, implementing business logic with session beans deployed on the Tomcat server.
- Integrated Java applications with enterprise-level systems, handling secure API interactions and third-party services.
- Designed and implemented messaging solutions using IBM MQ to enable secure, asynchronous communication between microservices, ensuring message reliability and fault tolerance.
- Created and executed SQL and Oracle queries, developing stored procedures, sequences, and packages for efficient data retrieval and manipulation from relational databases.
- Automated report generation with UNIX shell scripts Implemented debugging and monitoring with Log4j, with readiness to leverage tools like APPD and Dynatrace.
- Managed version control with Git, utilizing tools like Git Bash, and TortoiseGit, while collaborating on JIRA for issue tracking.
- Conducted code and design reviews, resolved performance and production issues, and supported pre-production deployments using JBoss application server and Atlassian tools.

PROJECTS

Comic Trekker – E-Commerce Platform | React, JavaScript, Java, RESTful APIs, AWS Lambda, CloudFront

- Developed a React-based e-commerce platform for DC Comics fans, implementing interactive user features, secure API integrations, and loyalty rewards systems.
- Designed and deployed backend services using Java with Spring boot, integrated with RESTful APIs for seamless data flow and enhanced performance.
- Leveraged AWS Lambda for serverless backend processing and AWS CloudFront for secure, low-latency content delivery.

BuyMe Bids – Real Time Auction Platform | Node.js, Express, CSS, JavaScript, Bootstrap, WebSocket, Restful APIs

- Designed and developed a real-time auction platform using **Node.js**, **Express**, and **WebSocket**, enabling seamless interaction between buyers and sellers with secure transactions and live bidding.
- Leveraged **MongoDB** for scalable storage of auction items and user profiles, ensuring high availability, and implemented robust RESTful APIs for secure data exchange and user authentication.
- Created responsive front-end interfaces with **EJS** templates and **Bootstrap**, delivering a consistent, engaging user experience, while integrating input validation to prevent fraudulent bidding activities.

EDUCATION

University of Memphis – Memphis

Master of Science in Computer Science | Concentration in AI and Machine Learning

LEADERSHIP & EXTRA-CURRICULARS

- **Leadership:** Mentored a team of 4 junior engineers, conducting bi-weekly sprint planning as Scrum Master and code reviews.
- **Volunteering:** Volunteered as the Indian Delegate for Seeds of Peace Summer Camp in 2018, a youth summit for building diplomatic relations and friendly dialogue between conflict-ridden nations.
- **Publication:** Published a symposium on Covid Fatigue Prediction at the **International Neuropsychological Society 2023**.
- **Awards:** Won prestigious hackathons including WicHacks 2021, IBM Hack Challenge 2019, and Mumbai Hackathon 2019.
