

# Sai Anurag Pasikanti

saianurago9@gmail.com | (716)-256-4331 | Norristown, PA

## EDUCATION AND CERTIFICATIONS

### State University of New York at Buffalo

Master of Science in Systems Science and Thoery

Buffalo, NY

Graduation: Dec 2023

### Indian Institute Of Information Technology Design and Manufacturing

Chennai, India

Bachelor of Technology in Mechanical Engineering with specialization in Design and Manufacturing

Graduated Jun 2020

- APICS: Certified Professional in Inventory Management and Lean Six Sigma Green Belt

## SKILLS

- Manufacturing Systems: PAS-X MES, SAP, Rockwell FactoryTalk, AVEVA PI, Rockwell Netsuite, PMX (MES)
- Programming & Analytics: SQL, Python, T-SQL, VB.NET, SSAS, SSRS, Tableau, Power BI, Oracle, Access
- Supply Chain Planning: Master Production Schedule (MPS), Demand Forecasting, Capacity Planning
- Inventory Management: Enterprise Inventory Optimization (EIO), Safety Stock Planning, Inventory Targets
- Operations: KPI Development, Supplier Performance Management, New Product Introduction (NPI)
- Compliance & Standards: 21CFR Part 11, GMP, FDA QSR, ISO 13485, ISO 14971, Change Control, SDLC, Validation
- Business Systems: ERP Systems, ITIL, Agile/Scrum, Purchase Order Management

## WORK EXPERIENCE

### Kenvue Brands LLC (LTIM Client)

Fort Washington, PA

Consultant Systems Engineer (MES)

May 2024 to Present

- Owned end-to-end EBR/MBR design and release in PAS-X (3.1.x); standardized recipes and "right-first-time" checks, cutting review/ release lead time by 25% and raising eBR RFT to 99% (review-by-exception).
- Integrated PAS-X to SAP (Mercury) and LIMS to eliminate dual entry and automate COA/lot genealogy; reduced manual touches 70% and freed \$120K/yr in planner/QA effort.
- Stood up DEV → TEST → PROD promotion + hotfix playbooks with IT; cut PAS-X incidents 45% and stabilized weekend manufacturing (fewer after-hours pages).
- Built a MES-driven readiness dashboard (BOM/MBR status, holds, line uptime) driving more than 95% NPI delivery and +18% QoQ improvement in on-time starts.
- Added MES gating for material readiness & COA verification to prevent late-stage failures; -85% critical-material delays, avoiding \$250K/yr in expedites/overtime.
- Led CSV & change control (URS/DS/FS, risk/CTP, IQ/OQ, release planning) in a GxP environment; -40% change lead time while keeping change failure rate less than 5%.
- Introduced exception/downtime taxonomy & trained 50+ operators on eBR workflows; -30% batch exceptions and -38% MTTR on fill/pack lines.
- Optimized sampling/holds via parameterized MBRs; -12% lab samples with same release confidence ( \$90K/yr QC savings).
- Supported audit readiness (21 CFR Part 11/Annex 11, ALCOA+); authored SOPs/WIs and closed CSV gaps pre-inspection to keep paperless records inspection-ready.
- Provided day-to-day PAS-X SME support for shop-floor operations; triaged & resolved P1/P2 incidents, performing L3 fixes and coordinating L4 escalations with vendor as needed.
- Administered front-end configuration (users, roles/profiles, scales, printers, master data) and partnered with infra teams on back-end components (Windows Server, JBOSS, Citrix/BPS/WXI).
- Performed periodic maintenance and environment health checks, managed service promotions, and executed data corrections with SQL (Oracle/T-SQL) under compliant change records.
- Troubleshoot interfaces/APIs across SAP, OSI PI (PI System), DeltaV, LIMS, and label/automation systems; resolved L2 integration issues across SAP KP/Info, SCADA, printers, ELIMS, webMethods/S4.

### Nile Automotive Group GA LLC

Cumming, GA

MES Systems Engineer

Jan 2024 to May 2024

- Built eBR/MBR workflows for molding & secondary ops with parameter checks (barrel temps, screw RPM, clamp force) and first-off approvals; -32% start-up scrap ( \$180K/yr savings).
- Integrated MES to ERP (material backflush, confirmations, auto label prints); lifted inventory accuracy 88% to 98.7% and reduced WIP by \$420K via tighter consumption posting & genealogy.
- Implemented shot-level traceability (resin lot → shot → cavity → component → pallet → shipment); achieved less than 2-minute recall readiness and passed customer traceability audits with 0 findings.
- Deployed real-time OEE from machine signals + MES events; +9.4 pts OEE (72% to 81.4%) and +11% throughput without new capex.
- Standardized changeovers (eSOPs, checklists, auto-holds until first-off OK); -39% average mold changeover time (90 → 55 min) and raised schedule adherence to 96
- Controlled regrind/colorant via MES rules; -2.7% resin variance, avoiding \$95K/yr overuse.
- Delivered shop-floor MES support (issue triage, data fixes, label/printing/scales), maintained master data and user/role models, and led root-cause of integration failures with ERP & devices.

**Novocure Inc.****Portsmouth, NH***Systems Engineering Intern**Jun 2023 to Aug 2023*

- Supported Optune device assembly in a regulated ISO 13485 / FDA 21 CFR 820 environment; ran time studies and line balancing to cut takt time 14%, freeing \$110K/yr in labor capacity.
- Designed and piloted eSOP/visual WI updates; onboarding time reduce by 30% and first-week training errors 45%.
- Executed a 2X3 DOE on adhesive cure/lamination parameters; scrap reduction by 22% and material spend \$85K/yr while maintaining CTQ capability (Cpk more than 1.33).
- Led GR&R and fixture validation for an in-process electrical test; total GRR less than 10% and false-fail rate reduction by 60%.
- Built a Power BI daily tier board (FPY, OEE, top defects); FPY increase by 8 pts and unplanned downtime reduce by 12% within one quarter.
- Streamlined DHR capture with barcode genealogy (component → sub-assembly → device); batch record review time reduce by 40% and audit retrieval less than 5 min per lot.
- Closed CAPA actions on recurring connector defects (5-Why/Fishbone, PFMEA updates); customer PPM reduce by 38% and escape rate 0 for 3 months post-fix.
- Tightened incoming inspection AQLs with suppliers; incoming defects reduce by 35% and quarantine inventory reduce by \$60K.
- Authored/updated change packages (ECR/ECO) and supported IQ/OQ/PQ; average change lead time reduce by 25% with 0 late actions in TrackWise/QMS.

**Explorico****Chennai, India***MES Engineer**May 2019 to Sep 2022*

- Authored and configured PAS-X eBR/MBRs for clinical & commercial batches, aligning master data (materials, BOMs, equipment, specs) with process development and QA.
- Provided L2/L3 PAS-X support: investigated P1/P2 incidents, executed data remediation via SQL (Oracle), and performed bug-fix validation under GMP change control.
- Integrated PAS-X with external systems: SAP (ECC/S/4) for order/COA/lot data, OSI PI for historian tags, DeltaV for equipment parameters/recipes, ELIMS for sampling/results; monitored and tuned webMethods/REST interfaces.
- Administered PAS-X front-end (users, profiles, scales, printers, labels, master data) and coordinated back-end activities across Windows Server, JBOSS, Citrix/BPS/WXI with infra teams.
- Performed periodic maintenance & patching, environment health checks, and job/services monitoring; executed promotions (DEV/TEST/PROD) following validated deployment playbooks.
- Supported CSV deliverables (URS, DS/FS, risk, IQ/OQ/traceability) and audit responses for 21 CFR Part 11/Annex 11; created/updated SOPs/WIs and trained end users on eBR workflows.
- Applied basic networking (TCP/IP, drive mapping, NAS permissions) to resolve client connectivity, printer/scales mappings, and file share issues on shop floor terminals.
- Collaborated with vendors & platform teams (Windows, DB, Linux, Citrix) to resolve performance defects and plan capacity for site expansions..
