Summary

Full Stack Developer with 4+ years of experience designing and delivering scalable web applications using Python (Django, Flask, FastAPI) and React.js with modern DevOps practices. Skilled in building secure RESTful and GraphQL APIs, architecting resilient microservices, and optimizing database solutions across SQL and NoSQL systems. Proficient in deploying cloud-native applications with AWS, Azure, Docker, Kubernetes, Terraform, and CI/CD pipelines, while ensuring reliability through monitoring with Prometheus, Grafana, and ELK. Adept at transforming complex business requirements into high-performing, user-centric solutions that drive measurable impact.

Technical Skills

Front-End Technologies: React.js, Next.js, JavaScript (ES6+), TypeScript, Redux, GraphQL, AJAX, jQuery, HTML5, CSS3, Bootstrap, Responsive Design, Web Accessibility (WCAG), Figma, Cypress, Jest, React Testing Library

Back-End & API Development: Python (FastAPI, Django, Flask), RESTful APIs, Microservices, Node.js, Express.js, Java, J2EE, Spring Security, ASP.NET, SOAP, MVC Framework, JWT, OAuth2, API Gateway, RBAC

Database & Storage: PostgreSQL, MySQL, MongoDB, SQL Server, Oracle, Redis, Firebase, Cassandra

Cloud Platforms & DevOps: AWS (EC2, S3, RDS, Lambda, API Gateway, Cognito, ECS, EKS), Microsoft Azure, Docker, Kubernetes (EKS, AKS, Helm, ArgoCD), Terraform, Linux, Jenkins, Git, GitHub Actions, CI/CD Pipelines, Serverless Framework

Messaging, Tools & Frameworks: Apache Kafka, RabbitMQ, Nginx, Load Balancing, Circuit Breakers, Swagger/OpenAPI, Postman, Apache Maven, Log4j, Guava, SonarQube

Monitoring & Collaboration: Prometheus, Grafana, ELK Stack, Splunk, ServiceNow, Jira, Agile/Scrum

Professional Experience

Full Stack Developer, ABCO Computers

May 2025 – Present | Remote, USA

- Designed Django backend with MongoDB collectionschema for centralized warranty tracking, handling 1.2M records, improving query performance by 28% and ensuring accurate lifecycle visibility across enterprise customers.
- Built React.js portal enabling customers to register devices, check warranty status, and request repairs, increasing self-service adoption by 35% and reducing support center call volumes significantly.
- Automated deployment pipelines with Jenkins, Docker, and Terraform, streamlining environment provisioning across AWS, reducing configuration errors by 23% and accelerating product rollout for global retail clients.
- Integrated Grafana dashboards with Django logging, monitoring repair request workflows in real-time, reducing troubleshooting time by 25% and improving SLA compliance for enterprise client service agreements.

Full Stack Developer, Databricks

Jan 2024 – Apr 2025 | Remote, USA

- Designed Flask-based backend with MySQL schema management for a unified data governance platform, enabling role-based access control across 200 datasets, reducing unauthorized queries by 28% across enterprise users.
- Built React.js portal with dynamic dashboards and reusable components, integrating Flask APIs to visualize dataset lineage, improving transparency for compliance teams and boosting audit readiness efficiency by 34%.
- Implemented WebSocket-powered real-time notifications for schema changes and access requests, supporting 9K concurrent users and reducing approval turnaround time by 31% within large data engineering organizations.
- Automated CI/CD deployments with Docker, GitHub Actions, and Helm, achieving 40% faster rollouts of governance features while maintaining stability across multi-cloud environments without unplanned downtime.
- Integrated Prometheus-Grafana monitoring with Flask middleware, creating compliance-specific alerts, reducing incident response time by 27%, and ensuring continuous reliability of governance applications critical for regulated industries.

Full Stack Developer, TCS

May 2019 – Apr 2022 | Remote, India

- Designed scalable Django backend with PostgreSQL integration, processing 1.9M monthly insurance claims, reducing query latency by 33% and enabling reliable data pipelines across enterprise financial applications.
- Built React.js web interface with Redux state management, providing dynamic claim dashboards for 12K daily users, improving response speed by 27% and enhancing overall customer portal satisfaction.
- Implemented RESTful APIs with Django REST Framework, enabling secure third-party integrations, increasing automation by 31%, and streamlining client communication for cross-platform claim validation and policy verification workflows.
- Automated CI/CD pipelines with Jenkins, and Kubernetes, deploying Django-React microservices efficiently, cutting release timelines from 14 days to 7 days across multiple staging and production environments.
- Developed role-based authentication using JWT and OAuth2 with Django middleware, strengthening security compliance, ensuring GDPR alignment, and supporting 9K authenticated sessions daily across customer and agent applications.
- Integrated ELK Stack with Prometheus-Grafana monitoring, providing real-time analytics on claim-processing services, reducing average troubleshooting duration by 28% and improving application resilience for high-traffic enterprise operations.

Education

Master of Science in Information Technology, University of Memphis

May 2022 – Dec 2023 | Tennessee, USA

Bachelor of Technology, JNTUK

Jun 2016 – Oct 2020 | AP, India
