SUMMARY

- Around **13 years** of experience as a **Full Stack Developer** in both **banking** and **e-commerce** product development.
- Strong knowledge and experience in implementing **open-source frameworks** such as **Spring, Spring Boot, Web Services (SOAP, REST), and Microservices**.
- Hands-on experience working with **Google Cloud Platform (GCP)** and **AWS** for faster **serverless application** development and deployment.
- Good understanding of cloud-based tools and frameworks for **CI/CD pipelines, build, and deployment**, including **Instaclustr, KONG, Weave Cloud, Auth0, Concourse, Cloud Build, Jenkins, TeamCity** and **TFS**.
- Testing tools and framework: **BlazeMeter, RunScope, Karate, Hercules, Jmeter, Mockito, cypress**
- Enhanced the **codebase** by fixing vulnerabilities identified through **Veracode, WhiteHat, SonarCloud**, and **Snyk**.
- Hands-on experience with alerting, monitoring, and logging tools like **PagerDuty, Stackdriver, New Relic, and Splunk**
- Experience working with databases such as **PL/SQL Developer, CockroachDB, PostgreSQL, Cassandra** and **MySQL**.
- Expertise in web development using **HTML, CSS, JavaScript, JSP, AJAX, JSON, AngularJS**, and **jQuery**.
- Involved in developing **mobile applications** using **PowerApps** and **Power Automate**.
- Worked on migrating legacy applications to **cloud-based** solutions.
- Developed an **agile migration plan** using **Cloud Run** and **Python** on a **low budget**.
- Strong understanding of **SOA design patterns** and expertise in working with **SOAP** and **REST web services**.

- Proficient in using **IDE tools** such as **Eclipse, Spring Tool Suite, Grails Tool Suite**, and **IntelliJ for Java/J2EE application development**.
- Led and directed teams using both **Agile** and **Waterfall methodologies** to effectively deliver projects.
- Cultivated an **SRE (Site Reliability Engineering) culture** to monitor and optimize cloud-based applications.
- Excellent **client interaction** and **presentation skills**, with proven experience working independently and in a team environment.

Education

- **Bachelor degree in Computer Science and Engineering (2007-2011)**
Graduated in 2011 from Anna University Tirunelveli - National Engineering College, Kovilpatti.
- **Masters of Technology in Data Science. (2020-2022)**
Graduated in 2022 from Birla Institute of Technology and Science, Pilani- India.

TECHNICAL SKILLS

Languages	JAVA, Python, Typescript, HTML, JavaScript,
J2EE Technologies	Servlets, JSP, AJAX, EJB2.0, JDBC, Web Services, JQUERY
Frameworks/System Design	Struts 1.2, MVC,J2EE Design Patterns, Grails, Spring Web Flow, Mockito, Microservices , gRPC , SpringBoot
Application/Web Servers	Apache tomcat Web Server 7.0, IBM WebSphere 8.0 , Serverless deployment in GCP
XML Technologies	XML, XSD, DOM, SOAP, WSDL ,XSLT
Databases	PL/SQL developer, MySQL Server , Cockroach , Cassandra, PostgreSQL
IDEs	Eclipse, RAD, Spring Tool Suite, Grails Tool Suite , IntelliJ, PyCharm
Tools	TeamCity, HP ALM, SOAP UI, JIRA, Postman, GIT, Confluence, JUNIT, Veracode, Putty, Splunk, SonarQube, TFS, Rally , Postman, Swagger, Redis, SendGrid

Cloud Tools and Pipeline	Instaclustr, Blazemeter, Runscope, PagerDuty, KONG, Weavecloud, Synk, Prisma, Auth0, Concourse, Cloud Build , Stack Driver
Operating Systems	WINDOWS, Linux
Cloud	Google Cloud Platform - AI Platform, Docker, ECS in AWS
Mobile App Stack	Power App , SharePoint, Power Automate, Support on Play Store and App Store for app releases
Visualization Tools	PowerBI and DataStudio reports

PROFESSIONAL SUMMARY

Senior Software Engineer at Unigo Inc

April 2022 – till date

Texas-USA

CapitalOne Bank

Responsibilities

- Develop an internal application using **Java** and **Angular** for the CapitalOne project projection and validation.
- Exposed the **backend APIs** based on the requirement and API design standards within the organization.
- Utilized Apache **Kafka** for real-time event streaming and message queuing, enabling asynchronous communication and event-driven architecture.
- Worked on a few **Angular** page development for frontend functionalities.
- Actively worked on the security **vulnerabilities** for the application on a regular basis by covering both **infrastructure** vulnerabilities and **container** vulnerabilities.
- **Whitesource** security issues were monitored using **Mend** tool and worked on the fixes for the same.
- Production monitoring using **New Relic** dashboard and **splunk** along with enhancing the queries to keep the applications secured and monitored.
- Develop **quartz jobs** for the application's regular emails for a lot of features.
- Experience implementing and managing scalable, secure, and cost-effective cloud solutions using Amazon Web Services (AWS).
- Work with functional leaders across the business to identify value in creation and improvement of a digital product and support product managers in the prioritization and break down of work, and co-ordinate the delivery of this work across developers / engineers.

- Work with cross functional teams to support and complete the requirements.
- Manage the team to work together in completing the expectation on the delivery of the products and the timeline.

Environment: AWS, Java, IntelliJ, Angular Js, Jenkins, JIRA, Confluence, PagerDuty , Vessel, Postgresql, DBVisualizer, New Relic, Splunk, CheckMarks, Mend

Senior Manager, Software Applications at Coats America, Inc.

Oct 2021 – March 2022

Texas-USA

Responsibilities

- Developed the robust **Ecommerce** application for Coats thread sales using Java and React.
- Exposed the backend APIs using gRPC to efficiently manage the request and response structure changes along with other web services such as SOAP and REST.
- Built a **migration engine** using **Google cloud tools** and **services** for migrating the legacy customers to the new platform.
- Bringing together the requirements for the **new ecommerce platform** and delivering them with enhanced and reusable features.
- All **microservices** are containerized and run in the Kubernetes engine as separate services.
- Extensively worked on **CICD** tools and **automating** the **deployment** in various regions.
- Supported all **digital products in Coats** that are built on top of the cloud platform and continuously monitor and improve the efficiency.
- Lead product teams to develop, operate, support and enhance digital products across the wide and complex landscape of applications globally.
- Developed and supported an application for customer cost estimation for certain special products using **Data Science prediction API** .
- Created a couple of Dashboards using **PowerBI** and **DataStudio** to visualize the overall revenue generated by the new application and adoption rate from the customer side.
- Work with functional leaders across the business to identify value in creation and improvement of a digital product and support product managers in the prioritization and break down of work, and co-ordinate the delivery of this work across developers / engineers.
- Ensure applications are delivered on appropriate and supportable technologies and platforms are aligned with the Digital and Technology strategy.
- Use external partners effectively to bridge capacity and capability gaps, ensuring adherence to Coats processes and standards.
- Developed **Churn prediction** for customers and estimated the best prediction model for the customers using the Ecommerce platform.

Environment: GCP,Java, IntelliJ, Kotlin, React, Cloud build, Concourse, JIRA, Miro, Confluence, Instacluster, Blazemeter, PagerDuty, Auth0, KONG, WeaveCloud, SendGrid, SharePoint, Cockroach, DBEaver, Cloud Run, Cloud scheduler, Terraform, Python 3.8, PowerBI, DataStudio

SysOps Manager at Madura Coats

Sep 2019 – Sep 2021
Madurai, India

Description:

Coats is the world's leading industrial thread company Headquartered in the UK, we have a workforce of 17000 in some 50 countries, across six continents around the world. Company is leading the industry through solutions and sustainable values. Primary goals of the organization include profitable sales growth, increased productivity and delivery value. As part of the digitalization am working in the Digital support and development team which is primarily looking forward to the support and new development for business.

Responsibilities

- Responsible for the full **stack development** team and delivery of all the projects under the Digital and Technology in Coats.
- Developed a key project for collecting **Sustainability data** across Coats sales organizations to control the sustainability targets using Java and microservices.
- Developed Contact Tracing for **Covid tracing** within the organization using Java, Kotlin and cloudSQL from GCP.
- Key responsibility is to deliver the end to end products for business needs with **Google cloud and advanced programming languages**.
- Involved in the overall lifecycle of the project development and delivery. Served my time across the team management and project management to get the efficient product delivery.
- Predominantly used serverless deployment through **Kubernetes, Cloud Run, Cloud Function** and **App Engine**
- Hands-on experience in configuring the build pipeline using **Cloud Build** and **Concourse**.
- Responsible for **choosing the right technology stack** for each product and designing the architecture.
- Developed and integrated the migration strategy through **Python** for the new eComm application.
- Work in real time problems for the Manufacturing side of the company and trying to provide solutions through **Data Analysis** and **Prediction models** through **Machine Learning**.
- Using **AI platform** in GCP to enhance the development in Data science side to benefits to its fullest
- Involvement in developing quick applications using **Power App** and **Power Automate** for paper to digital solutions within the organization.
- Responsible for the deployments and rollouts of the web and mobile application.

- Hands on with **App Store** and **Play Store** deployments for the internal mobile applications.

Environment: GCP, Java, Docker, AI Platform, PyCharm, Jupyter notebook from Anaconda, IntelliJ, Kotlin, React, Cloud build, Concourse, JIRA, Miro, Confluence, InstaClustr, Blazemeter, PagerDuty, Auth0, PowerApp, PowerAutomate, KONG, WeaveCloud, SendGrid, SharePoint, Cockroach

Senior Software Developer at BPMLinks LLC

Nov 2017 – Aug 2019

Atlanta, USA

SunTrust Bank

Description:

SunTrust Banks, Inc is an American bank. The largest subsidiary is SunTrust Bank. It had US\$199 billion in assets as of March 31, 2018. SunTrust Bank's most direct corporate parent was established in 1891 in Atlanta. The bank's primary businesses include deposits, lending, credit cards, and trust and investment services. Through its various subsidiaries, the company provides corporate and investment banking, capital market services, mortgage banking, and wealth management. The current project is on developing a new website for the SunTrust Wholesale and Small business clients.

Responsibilities

- Involved in all the phases of the development project from requirement gathering till production warranty support.
- Developed and supported a **customer facing banking site**.
- **Technical lead for the project development**.
- Working in the Scrum team and following the **agile** methodology in delivering the project on an estimated time frame. This is managed through **Rally**.
- **Continuous integration** is established through **TFS** (Microsoft Team Foundation Server) for the build and deployment in all the environments.
- Coding standards are measured with **SonarQube** and security level expectation are met through the **Veracode** scans
- **Web service** and **database** calls are used effectively using the **Redis** cache manager to improve the performance.
- Developing **Rest web services** for the front end and managing the response through **JSON**.
- The persistence of the data is done through the database using **MySQL server management**.
- Monitoring logs and production data are managed through **Splunk**, **AppDynamics** and remote desktops in a secured environment.
- Work involved loosely couple layers with **Microservices**. The service calls are well handled using **Hystrix** for any circuit issues in the flow.

- API documentation and testing are done through **Swagger**.
- Good communication and leadership quality.

Environment: Microsoft Team Foundation Server ,Rally, SonarQube, Veracode, Swagger, Putty, WinSCP, Maven repository, Spring Tool Suite, SQL Server, HP ALM, SOAP UI 5.3, Postman, Redis cache manager, Splunk, AppDynamics, Mockito ,Java, SpringBoot

IT Analyst at Tata Consultancy Services

September 2015-November 2017

Minneapolis, USA

MoneyGram International Limited

Description: MoneyGram International, Inc. (MoneyGram), incorporated on December 18, 2003, is a global payment services company. The Company's products include global money transfers, money orders and payment processing solutions for financial institutions. The Company's business is conducted through its wholly owned subsidiary, Travelers Express Company, Inc. It conducts its business through two segments: Global Funds Transfer and Payment Systems. Our project is the web development for the Call center representatives who assist the agents in send and receiving the transactions

Responsibilities

- Developed **web application** for the call center representatives who resolve all the queries related to the transactions.
- **Tech Lead** for the project and handling more than 5 members in the team.
- Consumer **SOAP services** in the application in various functionalities
- Used Client side scripting languages such as **Javascript, JQuery, AJAX , AngularJS and JSON**
- **Groovy on grails tool suite** is used for web application development.
- Application is built on **Spring core APIs** with **Java** and **Groovy**
- Used **GIT** for version control and **Team city, Hudson, Jenkins** for deployments
- Followed **MVC design** pattern for the development
- Grails and Java were the languages used to build the application.
- Worked in **agile technologies** are used for the application development
- Written **JUNIT** test cases for all the newly developed components using **SPOCK** Framework
- Coverage reports were generated using **SONAR** and **Cobertura**.
- Provided Warranty support and the respective **support documentations** for the application support team
- Responsible for creating the code review document and unit test documents.
- Used **SQL queries** in accessing the backend data through the application.

- Effective communication and interaction helped the project to deliver on time.
- Coordinated with multiple teams and delivered the project on time.

Environment: GSP, Groovy, Ajax, JavaScript, JQuery, Java 1.7, SOAP Services, GGTS, GIT, TeamCity, Hudson, ALM, Gradle build, Putty, Splunk, Spring, PL/SQL

Systems Engineer at Tata Consultancy Services

November 2013- August 2015
Chennai, India

MoneyGram International Limited-MGO

Description: MoneyGram online is one of the major segments of the business for online customers to transfer money from anywhere, anytime. This project involves a team of 30 members. This was effectively under agile methodology in its delivery. Had a great exposure to the web technologies from front till the backend for any transaction in the systems.

Responsibilities

- Developed user interface using **Java Server Pages (JSP)** and **Ajax** to provide a component based model
- Used client side scripting languages such as **JavaScript** and **JQuery**.
- Implemented DAO layer using **JDBC connections**
- Applied concepts of **EJB timers** for the batch process in the application
- Implemented security related fixes with **OWASP** standards.
- Used **Eclipse, RAD, Spring tool suite** to develop
- Wrote **JUnit** test cases for testing the developed code
- Used **Apache Axis** & SOAP Protocol for web services communication
- **Waterfall methodology** and **agile** technologies are used for the application development
- **IBM WebSphere server and Tomcat 7.1** are used in the application development
- Used **GIT** for version control, **TeamCity** is used as build tool and **Hudson** for deployment
- Responsible for creating the code review document and unit test documents.
- Tracking of issues and monitoring the bugs are done through **JIRA and HP ALM tool**
- Separate portal was maintained for **Content Management**

Environment: JSP, Struts, EJB, Ajax, JavaScript, JQuery, Java 1.5, Web Services, RAD, GIT, Agile/Scrum methodology, Ant build.

Assistant System Engineer at Tata Consultancy Services

May 2012–October 2013

Bangalore, India

American Express Credit Card Systems

Description: In the banking industry, new offers are introduced regularly and some offers are discontinued for various reasons. The process of introduction and discontinuation involved a lot of processes and documentation. The Project involved creating a web application which aims to streamline the process, make it more efficient, and reduce time delays and make every task accountable to one user.

Responsibilities

- Analyze the requirements to come up with the required enhancement functionality
- Reporting the completion of task assignments to client & on site coordinator instantly as a daily basis
- Providing knowledge transformation documents to new team member
- Documenting the project deliverable
- Worked on **SOA** design pattern with respect to Web Services and architecture.
- Writing test cases for **unit testing** with Junit
- Developing web pages using **html, CSS and javascript**
- Involved in the enhancement of internal tool in **Java**
- Responsible for creating the code review document and unit test documents.
- Developed SharePoint application for the build deployment approval process within the teams.

Environments: Java, PL/SQL Developer, HTML, CSS, JavaScript, SharePoint, JUnit

Assistant System Engineer Trainee at Tata Consultancy Services

Dec 2011–April 2012

Chennai, India

Description: Tata Consultancy Services (TCS) is a global leader in IT services, digital and business solutions that partners with its clients to simplify, strengthen and transform their businesses. The initial training period in TCS taught about the work ethics and exposed to good learning in various technologies.

- Team work and technical skills are developed .Trained extensively in Java.
- Recognized for the high level of team coordination and **awarded “Kudos”** in my training batch
