

Santhosh Adla | Cloud Engineer

MO, US | +1 (314) 399 9210 | adlasanthosh4@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Cloud Engineer with nearly **4 years of experience** building and managing AWS infrastructure using Terraform, Docker, Kubernetes, EKS, Python (Boto3), and CI/CD pipelines. Reduced environment provisioning time by 50%, lowered cloud costs by \$1,200 monthly, and cut MTTR by 40% through automated monitoring and alerting. Skilled in implementing IAM least-privilege roles, KMS encryption, and secure S3 policies, achieving 99.95% uptime and passing security audits with zero critical findings. Experienced in cross-team collaboration and DevOps workflow standardization.

TECHNICAL SKILLS

Cloud Platforms & Services: AWS (EC2, RDS, S3, VPC, IAM, KMS, CloudWatch, EKS, Lambda, Route 53)

Containerization & Orchestration Docker, Kubernetes, Helm charts, Rolling Deployments, Namespace Isolation

Cloud Security & Compliance: IAM least-privilege, Encryption, S3 bucket policies, Security audits compliance

Infrastructure as Code & Automation: Terraform (modules, environment provisioning), Bash, Python (Boto3), Cloud resource automation

CI/CD & DevOps Practices: Jenkins, GitHub Actions, Automated testing, Rollback mechanisms, Git workflow optimization, Branch management, Merge templates, Linters

Monitoring & Observability: CloudWatch dashboards & alerts, Prometheus, Grafana, ELK stack integration, Real-time performance metrics tracking

Database & Data Management: PostgreSQL (RDS snapshots, read replicas, performance monitoring), Database availability optimization

Networking VPC, Subnets, Route Tables, Security Groups, Cross-environment isolation (dev/test/prod), Network security improvements

Collaboration & Documentation: Runbooks, CI/CD guides, Rollback procedures, Knowledge transfer, Agile & DevOps cross-team collaboration

PROFESSIONAL EXPERIENCE

Synchrony Financial, MO, US

Jan 2025 - Current

Cloud Engineer

- Accelerated infrastructure deployment by 50% using modular Terraform templates for EC2, RDS, VPC, and IAM, ensuring consistent provisioning across development, testing, and production environments while reducing errors and manual effort.
- Automated cleanup of orphaned EC2 volumes, unused snapshots, and S3 objects using Python (Boto3), saving \$1,200 monthly in cloud costs and improving overall resource utilization, governance, and operational efficiency across teams.
- Reduced mean time to resolution by 40% by implementing CloudWatch dashboards, alarms, and notifications to monitor CPU, memory, disk, and application logs, enabling proactive detection and faster incident response.
- Achieved 99.95% uptime by deploying Docker containers to EKS with rolling updates, health checks, and resource limits, supporting high-availability services during scheduled maintenance and critical production deployments.
- Strengthened cloud security posture by enforcing IAM least-privilege roles, KMS encryption, and S3 policies, passing quarterly security audits with zero critical findings while mitigating vulnerabilities and ensuring compliance.

Accenture, India

Jul 2021 - Jul 2023

DevOps Engineer - Associate

- Increased CI/CD reliability by 60% using Jenkins and GitHub Actions with automated tests, rollback mechanisms, and notifications for 20+ internal microservices across distributed global teams and environments.
- Reduced provisioning errors by 70% through Terraform modules for VPCs, EC2 instances, subnets, and IAM roles in client-specific AWS environments, improving deployment accuracy, repeatability, and operational efficiency consistently.
- Improved PostgreSQL availability by 30% using RDS snapshots, read replicas, and performance monitoring, minimizing downtime during high-traffic periods and ensuring transactional workloads remain highly available and performant across environments.
- Integrated Prometheus and Grafana for real-time monitoring, detecting performance bottlenecks 25% faster across CPU, memory, latency, and application metrics, enhancing observability, reliability, and proactive issue resolution across services.
- Accelerated release cycles by 40% by standardizing Git workflows, branch naming conventions, merge templates, and linters, improving collaboration, deployment efficiency, and consistent processes across DevOps and QA teams.

InfraCloud Technologies, India

Aug 2020 - Jun 2021

Site Reliability Engineer (SRE) - Junior

- Increased deployment reliability by 35% by containerizing applications using Docker and deploying to Kubernetes with YAML configurations, probes, resource quotas, and namespace isolation, improving environment stability.
- Automated IAM audits, EC2 volume checks, and log rotation using Bash scripts and AWS CLI, saving 25 hours monthly while ensuring operational compliance, resource hygiene, and accurate reporting for daily workflows.
- Reduced incident triage time by 50% integrating CloudWatch logs with ELK stack, enabling structured error tracking, alerting, and faster resolution for outages, regression testing, and high-priority production incidents effectively.
- Designed and implemented VPCs, subnets, route tables, and security groups, isolating dev, test, and production environments, improving network security by 40% and reducing cross-environment conflicts by 55% systematically.
- Onboarded six engineers by maintaining comprehensive runbooks, CI/CD guides, and rollback procedures, accelerating knowledge transfer, enabling faster response to incidents, and ensuring operational readiness across distributed DevOps teams.

EDUCATION & CERTIFICATION

Master of Science in Information Systems

May 2025

Saint Louis University, Saint Louis, Missouri

Bachelor in Mechanical Engineering

Jul 2021

CMR Institute of Technology, Telangana, IN

AWS Solutions Architect Associate

Jan 2025

GitHub Foundations Certificate

Apr 2025
