

PROFILE SUMMARY

- **Salesforce Certified Platform Developer (I& II) with 10 years of experience in Salesforce platform development & testing.**

CAREER EXPOSURE

- Expert in working in different **SDLC & Testing Methodologies** like **Agile – Scrum Model**, and **Waterfall Model**.
- Strong experience in UI testing of Salesforce automation processes and workflows.
- Worked on various projects based on **Sales Cloud, Service Cloud, Community Cloud**, and Custom Auditing Applications.
- Have implemented **Salesforce Sales Cloud** – CRM, including Leads, Accounts, Opportunities, and product customization.
- Strong familiarity with **Salesforce automation tools** and technologies, including **Apex, Visualforce**, and **Lightning**.
- Experience in working with **Eclipse IDE** with **Force.com** Plugin environment for writing Business logic in **Apex** Language.
- Master in implementation & Integration on Salesforce.com using **Apex (Classes, Controllers, and Triggers), Batch Apex, Apex Web Services**, and **Visualforce Pages**.
- Have a specialization in Configuration, Customization, and Support on **Force.com** and **Lightning** platform.
- Have worked on **Aura Framework**, by adding Aura Attributes and Aura Handlers for Events to focus on Logic and Interactions in **Lightning Applications**.
- Knowledge of **Salesforce Lightning UI, Lightning Design System**, and **Lightning Process Builder**.
- Adept in **VisualForce** pages, custom controllers components, custom objects, reports, analytic snapshots, dashboards, & tabs.
- Configures solutions through third-party applications such as Conga, DocuSign, Form Assembly, Rollup Helper, SharinPix, Cloud Answers Report Sender, and Salesforce Maps
- Sound knowledge of **salesforce Object** and **Data security**.
- Hands-on experience in implementing **security & sharing rules** at object, field, and record levels for different users at different levels of the organization. Also created various profiles and configured the permissions based on the **organizational hierarchy**.
- Well-versed in front-end development using **HTML, CSS, JavaScript**
- Good knowledge of **SOQL** and **SOSL** for Querying and Searching Data for the Force.com platform and Salesforce Lightning.
- In-depth understanding of **Salesforce architecture, objects, and data models**.
- Experience in writing complex **SQL scripts** using **SQL Developer & MS SQL** for verification of values frontend and backend.
- Adept with **SFDX** and **CI/CD** implementations and technologies such as **Jenkins, Change Sets, Copado, Jules** and **Github** actions.

EDUCATION:

- B.Tech in ECE from Raja Mahender College of Engineering - 2009

TECHNICAL SKILLS

Salesforce Technologies	Apex Language, Apex Trigger, Apex Scheduler, Batch Apex, Apex Class, Apex Web Service, VisualForce (Page, Component & Controllers), LWC, Flow, Force.com Web Services API
Salesforce Tools	Eclipse IDE Plug-in, Visual Studio Code, Data Loader, Excel Connector, Migration Tool, COPADO, Lightning components, Aura components, Changesets, Force.Com IDE
Web Technologies	HTML5, CSS3, JavaScript, Bootstrap, Apex, Ajax, XML, SQL, SOQL, SOSL, WSDL, JSON, SOAP, Bulk, REST, Java
Databases & Office Tools	Force.com DB, MySQL, MS SQL Server, Oracle, MySQL, RDBMS, MS Access, MS Office
Automation & Testing Tools	Selenium WebDriver, Maven, TestNG, TestRail,
Salesforce Cloud	Sales Cloud, Service Cloud, Community Cloud
Custom Integration	Outbound Messages, Workflow Rules & Approvals, Record Type, Quotes, Formulae, Process Builders, Role & Profiles, Page Layouts, Field Updates, Reports, Custom Objects Custom Settings, Custom Labels and Tabs, Email Services, Role Hierarchy, Dashboards, Security Controls, AppExchange Package & Custom Application, Tableau Dashboard
Tools & Utilities	Force.com GUI, Apex Data loader, Force.com Apex Explorer, Force.com Excel Connector, Jira, VS Code, Git, GitHub, Copado, GitLab, Jenkins, Workbench, Salesforce Inspector, Aura components,Jules
SDLC Knowledge	Agile, Scrum, Waterfall

WORK EXPERIENCE

BOFA, USA

July 2023– Dec 2024

Salesforce Developer Team Lead

Project Description: Worked on the implementation of a Salesforce-based solution to optimize sales processes and enhance customer relationship management. It was aimed at getting a 360-degree view of every customer with a fast, flexible, and scalable platform.

Responsibilities

- Implemented SFCC platform technology and API to manipulate data , integrating with external services and worked with HTML&CSS on the front end.
- Made custom objects, tabs, entity-relationship data models, & validation rules on objects, components, & visual force pages
- Designed various webpages in Visualforce for capturing various customer inquiries and implemented logic for migrating cases to different queues based on the type of customer inquiry.
- Involved in the business process review meetings and multiple teams for ascertaining standardized workflow processes
- Responsible for creating & customizing various custom objects, tabs, components, and visual force pages and controllers
- Created formula fields, validation rules, workflow, and approvals for the flexibility and functionality of the force platform
- Implemented case management automation to track and solve customer issues.
- Worked on service cloud communities for sharing business processes.
- Experience with web services technologies (XML,REST,SOAP).
- Expertise in integrating salesforce applications with third party system using REST and SOAP API.
- Experience working across various sfdc implementations that are covering sales cloud, and service cloud.
- Written SOQL queries against force.com API. Used Ajax to get the data from the server asynchronously by using JSON objects.
- Worked with the salesforce lightning using lightning pages.
- Integrated Apex with External services by making callouts that used SOAP and REST API

- Handled the customizations of reports, dashboards, workflows, and approval processes.
- Worked on multiple test class components to fulfill the code coverage. Extensively worked on Apex data loader.
- Migrated data from MS Excel / CSV files to sfdc using data loader.
- Involved in creating record types, page layouts, and profiles to hide/show visibility to various fields.
- Implemented the requirements on the salesforce.com platform and force.com ide plug-in using Eclipse.
- Developed Apex classes and Apex triggers for various functional needs in the application.
- Created page layouts, & search layouts to organize fields, custom links, related lists, and other components on a record detail.
- Implemented pick lists, dependent pick lists, lookups, junction objects, master-detail relationships, validation, and formula fields to the custom objects, web to case, and email to case.

Environment: Salesforce.com platform, Apex, Ajax, SOQL, VisualForce (Pages, Component, and Controllers), Pages, Data Loader, Heroku, S-Controls, HTML, JavaScript, CSS, Apex Triggers, Web Services, Reports, Custom Objects, Custom Tabs, Email Services, Security Controls, Sandbox data loading, Eclipse IDE Plug-in, SOAP and REST API

Intient Harmony , USA

Aug 2021 - July 2023

Salesforce Developer

Project Description: The project at Piramal Finance formulated a strategic approach to optimize its CRM. It was liaised in cooperation with the existing IT teams to make configurations, development, and migrations easier while maintaining the integrity of the system. Here I worked as a Salesforce Developer where the focus is on Salesforce configurations and designs of Service and Sales Cloud with Force.com solutions.

Responsibilities

- Customized the Salesforce.com application as per business requirements
- Created custom objects, fields, tabs, page layouts, record types, users, profiles, and roles
- Maintained data cleanliness and accuracy by adding custom validation rules, and formula
- Worked on data migration from databases to SFDC using Data Loader
- Provided Production Support for the CRM system developed on the Salesforce.com platform
- Developed apex classes, apex triggers, visual force pages, custom controllers, and controller extensions
- Created, rules, page layouts, tasks, email alerts, & outbound messages to manage the workflow & approvals
- Involved in automating business processes by using workflow rules and approval processes for automated alerts, field updates, and Email generation according to application requirements
- Worked with the team to customize and configure a business model which was revolving around multiple financial products
- Involved in testing, debugging, enhancements, and deployments using change sets and package deployments using VS Code
- Responsible for successfully designing and delivering zone and area-wise branch assignments to categorize different Loans
- Provided, handled, and supported overall Project activities and distribution channels of Loan Services
- Configured marketing cloud package into production. Set up the marketing journey chained with salesforce campaigns
- provided regular business-as-usual support to the onsite team with their day-to-day requirements and enhancements

- Developed lightning component-based stage movement functionality to handle the loans and approvals at various stages
- Used Salesforce Lightning App Builder to make custom applications using the Lightning Component Framework
- Worked on salesforce.com standard objects like Accounts, Contacts, Leads, Campaigns, Opportunities, Quotes, Activities, etc
- Worked with SOSL and SOQL queries to get data from different related objects using Query Builder
- Supported the JIRA integration of existing and new applications within the current infrastructure
- Created Reports and Dashboards as per the customer requirements
- Worked on various Integration implementations with REST API and OAuth 2.0 in Apex Salesforce
- Developed UI using Lightning Web Components along with HTML, CSS, and JavaScript
- Created multiple Lightning Components, and added CSS & Design Parameters for making Lightning components look better.

Environment: Salesforce.com, Apex, Visualforce, Lightning, REST/SOAP API Web Services, Pages, HTML, JavaScript, CSS, Workflow & Approvals, Reports, Lightning Experience, Lightning Components, Custom Objects, Custom Tabs, OmniChannel, Data Migration, SOQL, SOSL, Data Loader, Salesforce Lightning App Builder

Citi Bank, Hyderabad, India
Salesforce Developer

Jun 2018 - July 2021

Project Description: The project at Citi Bank included the development and implementation of a custom Salesforce CRM solution for Citibank Wealth Management that integrated and replaced its fragmented system of on-premise software. The new CRM provided a central 'dashboard' of key client data which was accessible on mobile devices.

Responsibilities:

- Maintained the functional areas of accounts, contacts, leads, campaigns, opportunities, quotes, activities, & dashboards.
- Customized the dashboards to monitor lead activities based on sales geography.
- Designed, developed, and deployed the Custom objects, Page layouts, Custom tabs, and Components.
- Manage users, Public Groups, Profiles, and Roles within the Salesforce CRM this involved designating access to the applicable user within the user hierarchy.
- Responsible for the creation of custom Apps, and Reports using the Salesforce CRM cloud computing model.
- Written SOQL queries against force.com API. Used Force.com Eclipse IDE plug to develop the classes and triggers.
- Developed different Visual Force Pages to suit the needs of the application using different Visual Force components.
- Using Apex Data Loader mapped data sources and loaded data into the Call Center application.
- Designed, developed, & deployed Apex Classes, Controller Classes, and Apex Triggers for functional needs in the application.
- Coded APEX triggers and S-controls, and created rule-based automated workflows.
- Created Formula Fields, Validation Rules, Assignment Rules, Workflow, and Approvals for the flexibility and functionality of the force platform application.
- Generated different Reports like standard, summary, and matrix for quarterly and half-yearly sales.
- Used the sandbox for testing and migrated the code to the deployment instance after testing.
- Integrated the Service Cloud by generating the necessary stubs from the WSDL files for external applications and also integrated with multiple other systems to Salesforce.

- Also involved in using the Sandbox for testing and Migrating the code to the deployment instance after testing. Interacted with the Salesforce.com premium tech support team on a regular basis.
- Involved in implementing Rest API using Java application for loading data from external systems.
- Customized portal for UI updates using HTML, CSS, and JavaScript.

Environment: SFDC, Apex, SOQL, Data Loader, Force.com, Import Wizard, Eclipse IDE, Controllers Visual Force Pages, XML, Triggers, Rest API, Java, HTML, CSS, and JavaScript.

**Humira Social complete Answers, Hyderabad, India
Developer /Administrator Project**

Mar 2016 - Jun 2018 Salesforce

Description: Abbive uses social media to advertise their products and health related programs. This project scope is to interact with patients via social media. Whenever a patient comments or posts on a client's Facebook page (Post/comment/reply), we would create an account, contact and case in Salesforce. Agents from Abbive gives response to patients via cases in salesforce, which in turn posts them on Facebook as comments. LiveMessage app exchange product is also used for instant messenger chat with patients to resolve patient queries.

Responsibilities:

- Designed, and developed custom solutions on the salesforce platform tailored to the needs of healthcare organizations, leveraging Salesforce Health cloud and related technologies.
- Building and customized Salesforce Health cloud components including data models, objects, fields, workflows and validation rules.
- Involved in SFDC Setup activities and customized the apps according to the functional needs of the organization.
- Implemented High-End Process and Application Customization using Apex & Visualforce to extend Salesforce Health cloud capabilities.
- Used Service Cloud to allow users to automate service processes, and streamline workflows.
- Involved in various activities of the projects, like information gathering, analyzing the information, and documenting the functional and non-functional requirements.
- Worked on analyzing the Standard Objects, Custom Objects, Permissions sets, Page layouts, and profiles in the design phase of the Salesforce Single View project. This includes the documentation of use, Decisions on field migration, and other tasks.
- Created users, roles, public groups, sharing rules, & record-level permissions to manage sharing access among different users
- Integrated Salesforce Health Cloud with external systems and APIs such as electronic health records(EHR), billing systems and third-party applications.
- Contributed to and supported all technical aspects of development and integrations on and with the Salesforce platform (developing, configuring, unit testing, bug fixing, release management, etc.).
 - Used Data Loader for Insert, Update, and Bulk Import or Export of Data from Salesforce.com S-Objects.
 - Used SOQL & SOSL for data manipulation by preprocessing records & generating Sets to avoid hitting the Governor's limits.
 - Implemented Service Cloud for customer service, including the configuration of email to case, case assignment rules, managed migration, and release of Service Cloud.
 - Completed cloud-based implementations through custom development in Salesforce Lightning (Aura, LWC), and Apex, as well as out-of-the-box Salesforce configurations.

Environment: SFDC, Apex, SOQL, SOSL, Data Loader, Force.com, Import Wizard, Eclipse IDE, Controllers VisualForce Pages, XML, Triggers, Rest API, Java, HTML, CSS, and JavaScript, S-Objects.

**Airtel Payments Bank, Hyderabad, India
Java / J2EE Developer**

Apr 2010 - May 2016

Project Description: Airtel Payments Bank, one of the trusted payment banks in India, provides the best offers on recharge, and utility payments. Worked on a mobile and web application for the bank based on vendor management. My role was to work with businesses, participate in sprints, help gather requirements, analyze them, scale them, and devise solutions.

Responsibilities:

- Was a part of the core agile team in developing the application in agile development methodology.
- Developed all the services by following a full blown Test-Driven Development.
- Interacting with the system analysts, and business users for design & requirement clarifications.
- Designed front-end pages using HTML, JavaScript, CSS, and Ajax calls to get the required data from the backend.
- Designed and developed this application using Spring MVC. Worked on Spring Framework IOC design pattern.
- Implemented Restful web services with JAX-RS (Jersey).
- Worked on automating test cases using Selenium Web Driver, TestNG, and Java framework.
- Experience in managing test cases and test suites using TestRail.
- Used Github for version control and Jira as a ticketing tool.

Environment: Java, HTML, CSS, JavaScript, Spring, JDBC, design patterns, HTML, XML, CSS, TestRail, Selenium Web Driver, TestNG, Github, Jira
